There are 2 correct answers to this question.

Response:

- **A. Role-based access control**
- **B. Data encryption at rest**
- C. Built-in antivirus software
- D. Social media integration

Answer: A,B

NEW QUESTION # 77

What is the main storage type of the object store in SAP Business Data Cloud?

- **A. SAP HANA data lake files**
- B. SAP HANA extended tables
- C. SAP BW/4HANA InfoObjects
- D. SAP BW/4HANA DataStore objects (advanced)

Answer: A

Explanation:

The primary storage type for the object store within the SAP Business Data Cloud (BDC) architecture is SAP HANA data lake files. SAP BDC is designed to handle vast amounts of diverse data, including semi-structured and unstructured data, which is efficiently stored in a data lake. The SAP HANA data lake, specifically its file storage component, provides a highly scalable and cost-effective solution for retaining raw, historical, and detailed data. This contrasts with traditional relational databases (like SAP HANA extended tables) or data warehousing constructs (like BW/4HANA DataStore objects or InfoObjects), which are optimized for structured, aggregated data and specific query patterns. The object store's reliance on data lake files in BDC underscores its capability to manage enterprise-wide data regardless of its structure, making it suitable for a wide range of analytical workloads, including those involving machine learning and advanced analytics where raw data access is crucial.

NEW QUESTION # 78

Which capability allows combining SAP and non-SAP data without physical replication?

Please choose the correct answer.

Response:

- A. Data Marketplace
- B. ETL Scheduling
- **C. Remote Tables**
- D. Flat File Upload

Answer: C

NEW QUESTION # 79

Which automatically created dimension type can you delete from an SAP Analytics Cloud analytic data model?

- A. Date
- B. Organization
- C. Version
- **D. Generic**

Answer: D

Explanation:

In an SAP Analytics Cloud (SAC) analytic data model, you typically have a degree of flexibility in managing dimensions. Among the automatically created dimension types, the Generic dimension can often be deleted if it's not relevant or desired for your analysis. Generic dimensions are often generated by the system based on identified data patterns but might not always align with specific business requirements or be redundant. In contrast, Date, Version, and Organization dimensions are fundamental and often system-critical, especially for planning models (Version, Organization) or time-based analysis (Date). These core dimensions are usually not freely deletable or are required by the system for specific functionalities. Therefore, for tailoring your analytic model to specific business needs, the ability to remove generic dimensions provides greater control and simplification.
