information. You won't get any telephone harassment or receiving junk E-mails after purchasing our SSM Study Guide. If we have a new version of your study material, we will send an E-mail to you. Whenever you have questions about our SSM study material, you are welcome to contact us via E-mail.

Scrum SSM (6.0) - SAFe® Scrum Master Sample Questions (Q41-Q46):

NEW QUESTION # 41

An effective SAFe scrum master helps the team improve on their journey towards excellence through continuous integration, continuous development and what else?

- A. continuous release
- B. Continuous exploration
- C. wip limits
- D. state of the art build tools

Answer: B

NEW QUESTION # 42

What is the intended value of the Backlog Refinement event?

- A. The team reviews and improves processes before the next Iteration
- B. The team is able to commit to a set of goals to be delivered in the Iteration
- C. The team is able to prepare requirements for Iteration Planning
- D. The team aligns on the progress of Iteration Goals

Answer: C

Explanation:

The intended value of the Backlog Refinement event is that the team is able to prepare requirements for Iteration Planning. Backlog Refinement is an ongoing process where the team collaborates with the Product Owner and other stakeholders to review, split, prioritize, and estimate the stories in the Team Backlog¹. One of the main objectives of Backlog Refinement is to ensure that the stories are ready for Iteration Planning, which means they are clear, feasible, testable, and small enough to be completed in a single Iteration². By doing so, the team can improve the quality, efficiency, and effectiveness of their work, as well as deliver value to the customers and the organization^{1,2,3}.

NEW QUESTION # 43

Scrum Masters can create an environment for continuous learning by supporting the following:

- A. All of the above
- B. Community of Practice
- C. Coding Dojo
- D. Team inside-outs

Answer: A

NEW QUESTION # 44

What is one organizing attribute that teams share with the other teams on their ART?

- A. Synchronization to a common cadence
- B. Simultaneous release in one pipeline
- C. Facilitation techniques amongst all meetings
- D. Prioritization across all backlogs

Answer: A

Explanation:

In the Scaled Agile Framework (SAFe), Agile Teams work together as part of an Agile Release Train (ART). One of the defining features that unites all teams within an ART is synchronization to a common cadence. This means all teams follow the same iteration schedule-planning, executing, reviewing, and retrospecting in harmony.

The common cadence provides a steady rhythm that simplifies coordination and dependency management across multiple teams. It ensures alignment by creating predictable, synchronized events such as PI Planning, System Demos, and Inspect & Adapt workshops. This synchronization allows cross-team integration and transparency, enabling teams to deliver coherent system-level increments and support scaled agility.

From SAFe guidance:

"Teams on the Agile Release Train (ART) align to a common cadence and synchronize their iterations, which facilitates system-level integration and provides regular opportunities for assessment and adaptation." Therefore, the correct answer is D. Synchronization to a common cadence, as it represents the key organizing attribute shared by all teams on an ART.

NEW QUESTION # 45

What is one anti-pattern of the Inspect and Adapt?

- A. Not enough team members attend the PI System demo
- B. Too many ideas enter the problem-solving workshop
- C. **No actionable improvement Features are created**
- D. Only one problem is identified by each team in the retrospective

Answer: C

Explanation:

One anti-pattern of the Inspect and Adapt (I&A) is to have no actionable improvement Features created as a result of the problem-solving workshop. This is considered an anti-pattern because the main goal of the I&A workshop is to identify and address the systemic issues that are limiting the effectiveness of the Agile Release Train (ART). The workshop should produce one or more improvement Features that are added to the ART backlog and prioritized for the next PI Planning event. These Features should be SMART (Specific, Measurable, Achievable, Relevant, and Time-bound) and aligned with the ART vision and goals. Without actionable improvement Features, the ART will miss the opportunity to learn and improve from the feedback and data collected during the PI.
