Microsoft Power Platform Developer certification exam is ideal for developers, IT professionals, and business analysts who are interested in building powerful business applications using Microsoft Power Platform. Microsoft Power Platform Developer certification validates the candidate's ability to develop solutions that meet business requirements, improve processes, and drive business outcomes. Furthermore, earning this certification demonstrates a strong understanding of Microsoft Power Platform's features and capabilities, including Power Apps, Power Automate, Power BI, and Power Virtual Agents. As a result, the Microsoft Power Platform Developer certification is highly valued in the IT industry and can lead to better job opportunities and higher salaries.

To take the PL-400 Exam, candidates should have a strong understanding of Power Platform technologies such as Power Apps, Power Automate, Power BI, and Power Virtual Agents. They should also have experience working with Microsoft Dynamics 365 and Microsoft Dataverse (formerly known as Common Data Service). PL-400 exam is intended for developers who have a minimum of two years of experience developing and extending Microsoft Power Platform solutions. Passing the PL-400 exam demonstrates a developer's expertise in creating and deploying custom business applications, automating business processes, and analyzing data using the Power Platform.

We will accomplish this objective by giving you access to some excellent PL-400 practice test material that will enable you to get ready

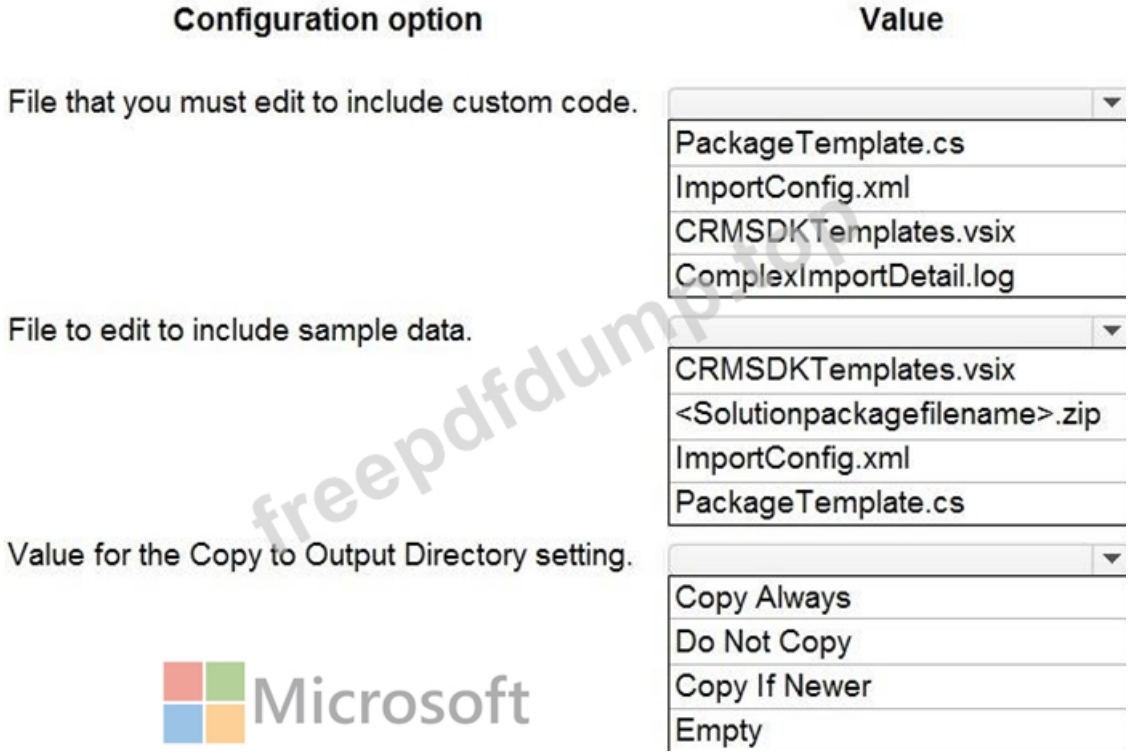
for the Microsoft Power Platform Developer (PL-400) exam dumps.

2. Paid instructor-led courses

There is one instructor-led training course delivered under the guidance of the Microsoft authorized trainers, which is known as Microsoft Power Platform Developer. In this course, the students will learn how to flow and extend the platform to complete the business tasks and processes and how to build power apps automate requirements. You will also be able to solve complex business problems after you complete the course.

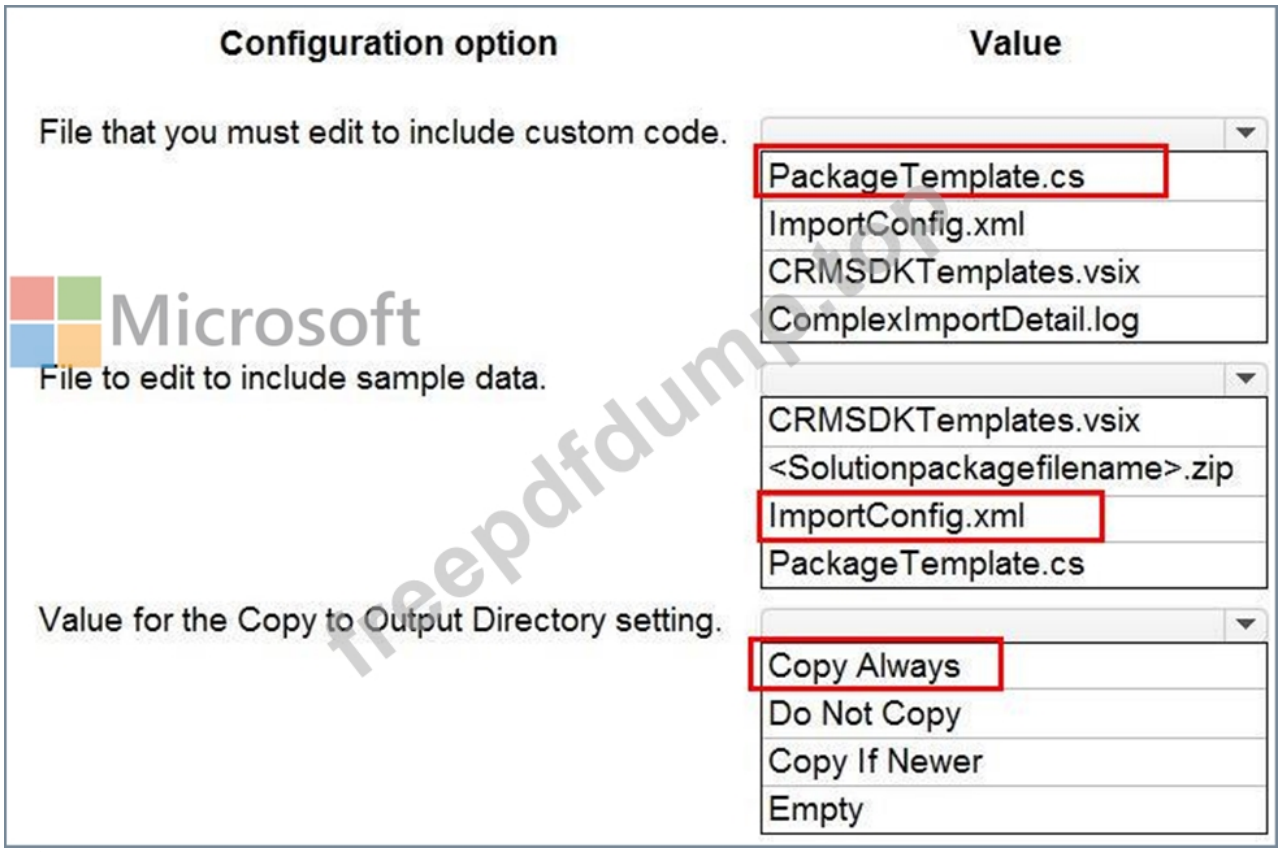
Microsoft Power Platform Developer Sample Questions (Q98-Q103):

NEW QUESTION # 98
You are creating a package for a Power Platform solution. The package will include custom code and sample data.
The package must include all files that need to be installed.
You need to configure the package.
Which setting should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.



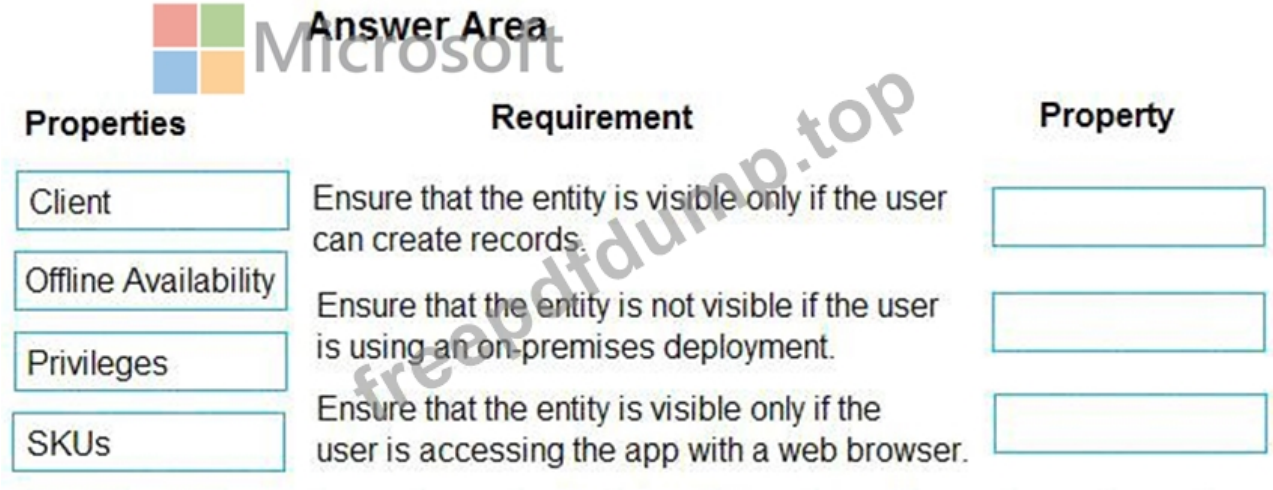
Answer:

Explanation:



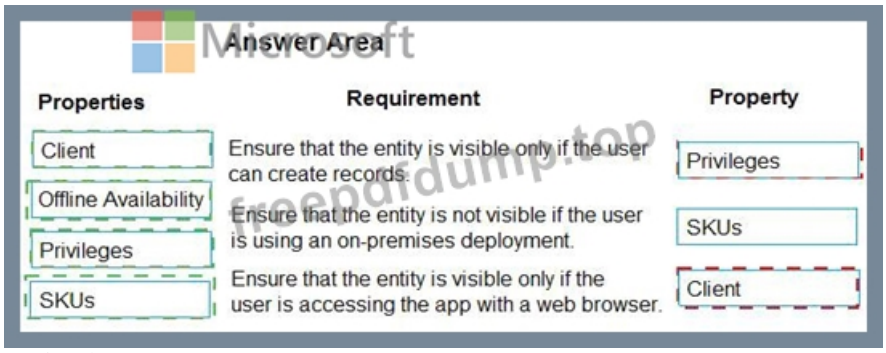
Reference:
https://docs.microsoft.com/en-us/power-platform/alm/package-deployer-tool

NEW QUESTION # 99
You are creating a model-driven app.
Users need to see only the entities in the app navigation that are relevant to their role and their method of accessing the app.
You need to restrict entities on the sub-areas in the SiteMap.
Which properties should you use? To answer, drag the appropriate properties to the correct requirements. Each property may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

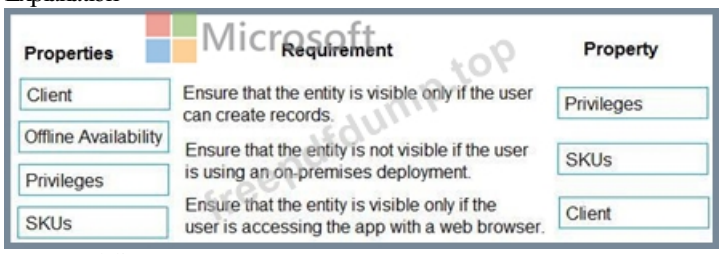


Answer:

Explanation:



Explanation



Box 1: Privileges

Privileges: This defines whether a subarea is displayed based on privileges available in any security roles that are assigned to the user.

Box 2: SKU

SKUs: Select the versions of Dynamics 365 that display this subarea.

Box 3: Client

Client: Select the type of client that displays this subarea.

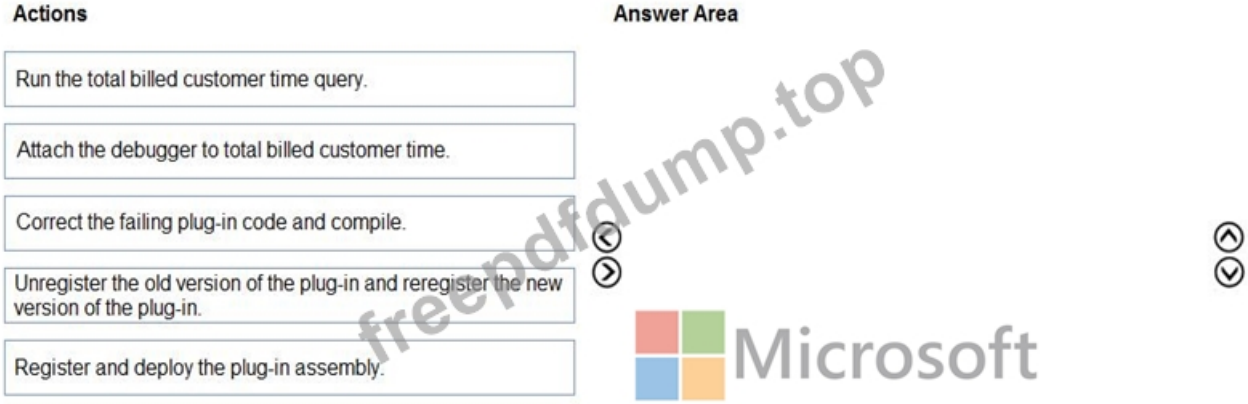
NEW QUESTION # 100

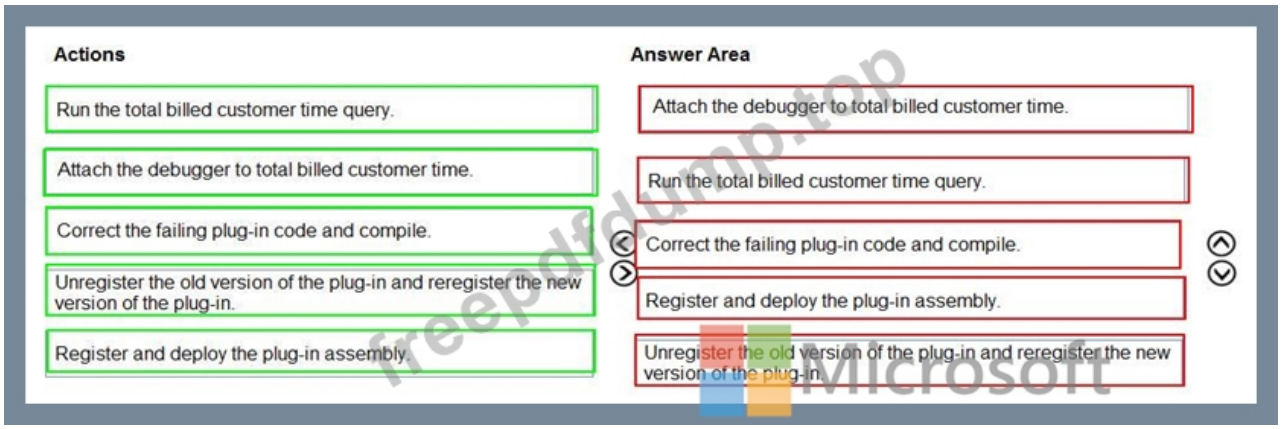
You need to resolve the performance issue with the Total Billed customer plug-in.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.



Answer:

Explanation:

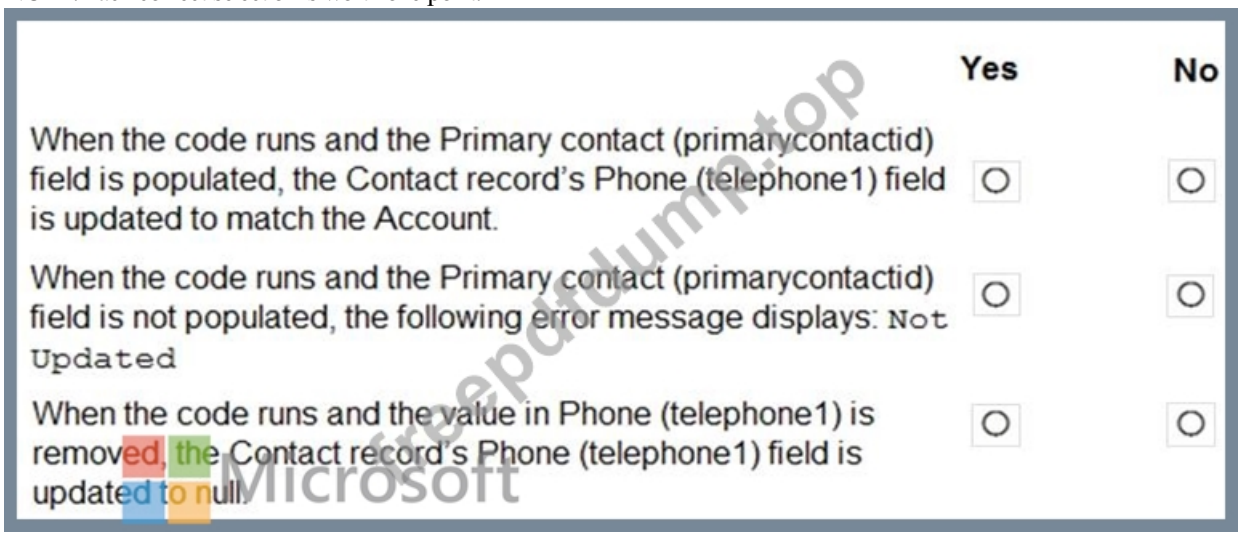


Reference:
https://docs.microsoft.com/en-us/dynamics365/customerengagement/on-premises/developer/register-deploy-plugins

NEW QUESTION # 101
A model-driven app has the following JavaScript code. The code is attached to the OnChange event of the Phone (telephone1) field on the Account entity.

```
var telephone = formContext.getAttribute("telephone1").getValue();
if (!telephone) {
     return;
}
var contact = formContext.getAttribute("primarycontactid").getValue();
var data = { "telephone1": telephone }
Xrm.WebApi.updateRecord("contact", contact[0].id, data).then(
     function () {
          Xrm.Navigation.openAlertDialog("Updated");
     },
     function () {
          var errorOptions = { "message": "Not Updated" };
          Xrm.Navigation.openAlertDialog(errorOptions);
     }
)
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.



Answer:

Explanation:

	Yes	No
When the code runs and the Primary contact (primarycontactid) field is populated, the Contact record's Phone (telephone1) field is updated to match the Account.	○	○
When the code runs and the Primary contact (primarycontactid) field is not populated, the following error message displays: `Not Updated`	○	○
When the code runs and the value in Phone (telephone1) is removed, the Contact record's Phone (telephone1) field is updated to null.	○	○

NEW QUESTION # 102
You are creating various Power Apps apps for a company. Power Automate flows must connect securely to the following external systems:

External system	Comments
Accounts receivable	This is a proprietary database. You must access the database by using an API. The API uses the client credentials grant type.
Bing Maps	You must access the API by sending a unique identifier in the query string of requests.

You need to create custom connectors to access the external systems.
Which type of security should you use for the connectors?
To answer, drag the appropriate security types to the correct external systems. Each security type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE; Each correct selection is worth one point.
