

305-300 Reliable Test Objectives & Valid Exam 305-300 Book

What's more, part of that ActualVCE 305-300 dumps now are free: https://drive.google.com/open?id=1oQsGOWT1_5G1QHq_YC-LJMIpEN-2uN5A

Our company has successfully launched the new version of the 305-300 study materials. Perhaps you are deeply bothered by preparing the exam. Now, you can totally feel relaxed with the assistance of our study materials. Our products are reliable and excellent. What is more, the passing rate of our 305-300 Study Materials is the highest in the market. Purchasing our 305-300 study materials means you have been half success. Good decision is of great significance if you want to pass the exam for the first time.

The LPIC-3 Exam 305: Virtualization and Containerization certification exam is a multiple-choice exam that consists of 60 questions. 305-300 exam is conducted in a proctored environment and requires the candidate to demonstrate their knowledge and skills in virtualization and containerization technologies. The passing score for the exam is 500 out of 800.

The LPIC-3 Exam 305 covers a wide range of topics related to virtualization and containerization such as installation, configuration, and management of virtualization technologies like KVM, Xen, and VMware. 305-300 Exam also evaluates the candidate's knowledge of containerization technologies like Docker, Kubernetes, and OpenShift. Additionally, 305-300 exam tests the candidate's understanding of the security, networking, and performance aspects of virtualization and containerization technologies.

The ActualVCE offers desktop Lpi 305-300 Practice Exam software for students to practice for the 305-300 exam. This software mimics the actual LPIC-3 Exam 305: Virtualization and Containerization (305-300) exam and tracks the student's progress, records grades, and compares results. Available for Windows computers, it requires an internet connection only for license validation.

Lpi 305-300 Certification Exam, also known as the LPIC-3 Exam 305: Virtualization and Containerization, is one of the most in-demand certifications for IT professionals. 305-300 exam is designed to test the knowledge and skills of professionals in the field of virtualization and containerization. It covers a wide range of topics including virtualization technologies, containerization technologies, and the use of virtual and containerized environments for various applications.

Lpi LPIC-3 Exam 305: Virtualization and Containerization Sample Questions (Q42-Q47):

NEW QUESTION # 42

The command `virsh vol-list vms` returns the following error:

```
error: failed to get pool 'vms'
```

```
error: Storage pool not found: no storage pool with matching name 'vms' Given that the directory/vmsexists, which of the following
```

commands resolves this issue?

- A. touch /vms/.libvirtpool
- **B. virsh pool-create-as vms dir --target /vms**
- C. dd if=/dev/zero of=/vms bs=1 count=0 flags=name:vms
- D. libvirt-poolctl new --name=/vms --type=dir --path=/vms
- E. qemu-img pool vms/vms

Answer: B

NEW QUESTION # 43

What is the purpose of the kubelet service in Kubernetes?

- A. Build a container image as specified in a Dockerfile.
- B. Provide a command line interface to manage Kubernetes.
- **C. Run containers on the worker nodes according to the Kubernetes configuration.**
- D. Manage permissions of users when interacting with the Kubernetes API.
- E. Store and replicate Kubernetes configuration data.

Answer: C

Explanation:

Explanation

The purpose of the kubelet service in Kubernetes is to run containers on the worker nodes according to the Kubernetes configuration. The kubelet is an agent or program that runs on each node and communicates with the Kubernetes control plane. It receives a set of PodSpecs that describe the desired state of the pods that should be running on the node, and ensures that the containers described in those PodSpecs are running and healthy. The kubelet also reports the status of the node and the pods back to the control plane. The kubelet does not manage containers that were not created by Kubernetes. References:

NEW QUESTION # 44

What does IaaS stand for?

- A. Intelligence as a Service
- B. Integration as a Service
- C. Information as a Service
- D. Instances as a Service
- **E. Infrastructure as a Service**

Answer: E

NEW QUESTION # 45

What is the default provider of Vagrant?

- A. docker
- B. hyperv
- **C. virtualbox**
- D. vmware_workstation
- E. lxc

Answer: C

Explanation:

Explanation

Vagrant is a tool that allows users to create and configure lightweight, reproducible, and portable development environments.

Vagrant supports multiple providers, which are the backends that Vagrant uses to create and manage the virtual machines. By

default, VirtualBox is the default provider for Vagrant. VirtualBox is still the most accessible platform to use Vagrant: it is free, cross-

platform, and has been supported by Vagrant for years. With VirtualBox as the default provider, it provides the lowest friction for new users to get started with Vagrant. However, users can also use other providers, such as VMware, Hyper-V, Docker, or LXC, depending on their preferences and needs. To use another provider, users must install it as a Vagrant plugin and specify it when running Vagrant commands. Users can also change the default provider by setting the VAGRANT_DEFAULT_PROVIDER environmental variable. References:

NEW QUESTION # 46

What is Docker Hub?

- A. A Linux distribution
- B. A container runtime
- C. A container image registry
- D. A container orchestration platform

Answer: C

Explanation:

Docker Hub is a cloud-based container image registry used to store, manage, and distribute Docker container images. According to container documentation, it hosts both official images and user-contributed images.

Docker Hub is not a Linux distribution, orchestration platform, or runtime. Therefore, the correct answer is B.
