## CompTIA A+ Core 1 Exam (2026) Sample Questions (Q368-Q373):

### NEW QUESTION # 368

An employee tries to use a projector to share a slideshow from a laptop. The projector displays the message No video signal from source device. A technician verifies that all cables are properly connected. Which of the following steps will most likely resolve this issue?

- A. Using a different computer
- B. Putting the slideshow on a USB
- C. Changing the input
- D. Power cycling the laptop

**Answer: C**

Explanation:

Changing the input ensures the projector is set to the correct source that matches the connected video cable, allowing it to receive and display the video signal from the laptop.

### NEW QUESTION # 369

Each floor at a new corporate facility will have four printers available for all users to print from. All of the printers will be connected with RJ45 and not joined to a domain. Which of the following needs to be set up to accomplish this task? (Choose two.)

- A. Printer Wi-Fi settings
- B. Printer shares
- C. DHCP server
- D. Print server
- E. SMB configuration
- F. Printer subnet

**Answer: B,D**

Explanation:

To allow multiple users to print to networked printers:

Printer shares enable users to access printers shared on the network. Print servers manage print jobs and provide centralized control of printing.

### NEW QUESTION # 370

Laura, a customer, has instructed you to configure her home office wireless access point.

She plans to use the wireless network for finances and has requested that the network be setup with the highest encryption possible. Additionally, Laura knows that her neighbors have wireless networks and wants to ensure that her network is not being interfered with by the other networks.

She requests that the default settings be changed to the following.

Wireless Name: HomeWiFi

Shared Key: CompTIA

Router Password: Secure\$1

Finally, Laura wants to ensure that only her laptop and Smartphone can connect to the network.

Laptop: IP Address 192.168.1.100

Hardware Address: 00:0A:BF:03:C4:54

Smartphone: IP Address 192.168.1.101

Hardware Address: 09:2C:D0:22:3F:11

INSTRUCTIONS

**NEW QUESTION # 371**

A user reports poor performance on the application server.

**INSTRUCTIONS**

Click on Server 1 and Server 2 and review the information presented in each chart to determine which drives need to be replaced.

Select the appropriate replacement drive that should be used, for the least performance degradation to the server.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

**Answer:**

Explanation:

See the detailed solution in explanation below.

Explanation:

The degraded status on Server 2 indicates a RAID-5 issue, typically due to a failed or failing drive. In RAID-5 configurations, when one drive fails, the system can still operate but with reduced performance as parity data is used to rebuild missing data on-the-fly.

Recommended Replacement Drive:

To minimize performance degradation, the replacement drive should be:

SAS HDD with the same specifications (64KB stripe size, no read-ahead, and write-back policy).

Matching the configuration exactly ensures seamless integration and optimizes recovery speed in the RAID-5 array.

In RAID-5, degraded performance is expected when one drive fails, as parity data needs to rebuild missing information during each read/write process. Replacing the failed drive restores the RAID array to optimal status, reducing the load on existing drives and returning the system to normal read/write performance. The write-back policy and disabled disk cache settings are designed to reduce latency and increase efficiency, essential for handling real-time applications.

A user reports poor performance on the application server.

**INSTRUCTIONS**

Click on Server 1 and Server 2 and review the information presented in each chart to determine which drives need to be replaced.

Select the appropriate replacement drive that should be used, for the least performance degradation to the server.

### NEW QUESTION # 372

A user prints a spreadsheet in duplex mode. The spreadsheet is difficult to read because some of the columns spill onto the second side of the page. Which of the following should the user do to prevent the issue but still print on both sides of the page?

- A. Turn off duplex printing.
- B. Try a smaller font size in the spreadsheet.
- **C. Change the page orientation.**
- D. Use a different print driver.

**Answer: C**

Explanation:

Changing the page orientation (e.g., from portrait to landscape) allows wider columns to fit on one side of the page. This maintains readability while continuing to use duplex printing.

Option A: Disabling duplex defeats the goal of printing on both sides.

Option B: May help, but could make the document harder to read if the font is too small.

Option D: Unlikely to resolve formatting issues related to layout and dimensions.

CompTIA A+ Core 1 Exam Objective Reference:

Objective 3.7: Given a scenario, troubleshoot common printer problems.
