High-quality Platform-App-Builder Reliable Dumps & Leading Provider in Qualification Exams & Authorized Platform-App-Builder Valid Test Brindumps

The Salesforce Certified Platform App Builder (Platform-App-Builder) questions is currently in use by many customers, and they are preparing for the test effectively. The applicants who used it previously to prepare for the Platform-App-Builder certification exam have rated our Platform-App-Builder Dumps as one of the best. Our customers receive Salesforce Certified Platform App Builder (Platform-App-Builder) questions updates for up to 365 days after their purchase.

To earn the Salesforce Platform-App-Builder Certification, candidates must pass a 60-question multiple-choice exam within 105 minutes. Platform-App-Builder exam is designed to test the candidate's knowledge and skills in building custom applications using the Salesforce platform. Candidates must have a thorough understanding of Salesforce's declarative capabilities and be able to design and implement custom applications that meet the specific needs of their organization. Salesforce Certified Platform App Builder certification is ideal for individuals who are interested in pursuing a career as a Salesforce Developer, Salesforce Consultant, or Salesforce Administrator. By earning this certification, professionals can demonstrate their expertise and stand out in a competitive job market.

Salesforce Certified Platform App Builder Sample Questions (Q95-Q100):

NEW QUESTION # 95

The app builder at Cloud Kicks has created a custom object named Delivery__c to track the details of products shipped to

customers.

Which two actions should the app builder take to prevent users in the shipping department from deleting delivery records?

Choose 2 answers

- A. Remove the delete button from the Delivery page layout.
- B. Change the organization-wide default of deliveries to Private.
- C. Remove the Delete permission from the Shipper profile.
- D. Use a permission set to remove the Delete permission.

Answer: C,D

Explanation:

Explanation

Removing the Delete permission from the Shipper profile and using a permission set to remove the Delete permission are both valid ways to prevent users from deleting delivery records. Removing the delete button from the Delivery page layout will not prevent users from deleting records using other methods, such as list views or reports. Changing the organization-wide default of deliveries to Private will not affect the delete permission, but only the sharing settings.

NEW QUESTION # 96

The Service Manager provided the app builder with color code requirements for case age on open cases.

New cases populate a green circle

Day-old cases populate a yellow circle

Three-day-old cases populate a red circle

How should an app builder implement this requirement?

- A. Quick Action
- B. Custom Button
- C. Formula Field
- D. Lightning Web Component

Answer: C

Explanation:

Explanation

A formula field is a read-only field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change. You can use formula fields to display images based on certain conditions. In this case, a formula field can be used to display a green, yellow, or red circle image based on the case age.

NEW QUESTION # 97

What is a true statement in regards to creating custom report types?

- A. When the primary object is a custom object and is deleted, then the report type and any reports created from it must be deleted manually.
- B. Once a report type is saved with a standard or custom primary object, the primary object cannot be changed for that report type.
- C. The detail object in a master- detail relationship cannot be added as a secondary object on a custom report type
- D. Any object can be chosen unless the object is not visible to the person creating the report type through security settings

Answer: B

NEW QUESTION # 98

DreamHouse Realty wants to import its property records from an external system into Salesforce. The app builder will use an external ID field to house the property ID from the external system.

Which two details should the app builder know when using external ID fields?

Choose 2 answers

- A. An external ID field can be a number field.
- B. An external ID field can be a URL field.

- C. An external ID field can be a text field.
- D. An external ID field can be a phone field.

Answer: A,C

Explanation:

An external ID field can be a number field or a text field, but not a URL field or a phone field. A URL field is used to store web addresses and a phone field is used to store phone numbers. An external ID field is used to store unique identifiers from an external system and it can be used for upsert operations

NEW QUESTION # 99

Universal Containers wants to streamline its data capture process by linking fields together. They wish to do this so that the available value on dependent fields are driven by value selected on controlling fields. Which consideration supports the stated requirements? Choose 3 answers

- A. Checkbox fields can be controlling fields but not dependent fields
- B. Multi select picklist can be dependent picklist but not controlling fields
- C. Custom picklist field can be either controlling or dependent field
- D. Standard and custom picklist fields can be dependent fields.
- E. The import wizard only allows value to be imported into a dependent picklist if they match the appropriate controlling field

Answer: A,C,E

Explanation:

Explanation

The import wizard only allows values to be imported into a dependent picklist if they match the appropriate controlling field. This ensures data integrity and prevents invalid values from being imported. Custom picklist fields can be either controlling or dependent fields. This allows the app builder to create custom dependencies between custom picklists. Checkbox fields can be controlling fields but not dependent fields. This allows the app builder to create dependencies based on checkbox values, such as true or false. Multi-select picklist fields can be dependent picklist fields but not controlling fields. This allows the app builder to create dependencies based on multiple values selected in a multi-select picklist field. Standard and custom picklist fields can be dependent fields, but not all standard picklist fields can be controlling fields. Some standard picklist fields, such as Lead Status or Opportunity Stage, cannot be controlling fields because they are used in other processes, such as lead conversion or sales path
