Customizable EMC D-PWF-OE-00 Exam Mode & Valid D-PWF-OE-00 Vce Dumps

Our D-PWF-OE-00 prep torrent boost the timing function and the content is easy to be understood and has been simplified the important information. Our D-PWF-OE-00 test braindumps convey more important information with less amount of answers and questions and thus make the learning relaxed and efficient. If you fail in the exam we will refund you immediately. All D-PWF-OE-00 Exam Torrent does a lot of help for you to pass the D-PWF-OE-00 exam easily and successfully. Just have a try on our D-PWF-OE-00 exam questions, and you will know how excellent they are!

EMC Dell PowerFlex Operate Exam Sample Questions (Q83-Q88):

NEW QUESTION # 83

What is the primary function of storage data targets in PowerFlex?

- A. Provide access to external storage resources
- B. Enable deduplication and compression
- C. Organize drives for storage pools
- D. Manage metadata for nodes

Answer: C

Explanation:
In PowerFlex terminology, the Storage Data Server (SDS) acts as the "Target" for I/O operations.
* Organize drives for storage pools (Option B): The SDS takes ownership of the local physical drives (NVMe/SSD/HDD) installed in the server. It aggregates these drives and contributes them to the Storage Pool. It handles the reading and writing of data blocks to this physical media.
Incorrect Options: Metadata is managed by the MDM (A). Access to external resources (C) is not the function of the SDS (which provides internal storage). Deduplication (D) is a specific feature, not the primary function of the component.

NEW QUESTION # 84
Which logical entity must be configured before creating a Storage Pool?

- A. Storage Data Server
- B. Fault Set
- C. Resource Group
- D. Protection Domain

Answer: D

Explanation:
* Protection Domain (Option B): The Protection Domain (PD) is the parent container in the PowerFlex hierarchy.
* Hierarchy: Protection Domain $\rightarrow$ Storage Pool $\rightarrow$ Device (Disk).
* Logic: A Storage Pool cannot exist in a vacuum; it must belong to a specific Protection Domain. The PD defines which group of SDS nodes the pool spans. You must create the PD first, add SDSs to the PD, and then create the Storage Pool inside that PD.

NEW QUESTION # 85
What are the benefits of using Resource Groups in PowerFlex? (Choose two).

- A. Allows shared access to storage resources
- B. Enables the creation of virtual machine snapshots
- C. Ensures fault isolation across nodes
- D. Simplifies storage resource management

Answer: A,D

Explanation:
This question likely refers to PowerFlex Manager (PFxM) concepts, where "Resource Groups" are used to organize hardware.
* Simplifies storage resource management (Option A): Resource Groups allow administrators to logically group disparate hardware (Nodes, Switches) into a single entity. This simplifies operations like upgrades or configuration changes, as you can apply a "Service Template" to the whole group at once.
* Allows shared access (Option D): In a multi-tenant environment, Resource Groups allow you to define which administrators or users have access to specific sets of hardware resources (Role-Based Access Control).
Note: "Fault Isolation" (B) is handled by Protection Domains, not Resource Groups.

NEW QUESTION # 86
Which characteristics define a Fault Set in PowerFlex? (Choose two).

- A. Ensures data availability during node failure
- B. Is limited to a single Protection Domain
- C. Requires a minimum of 3 nodes

- D. Contains metadata for storage pools

Answer: A,B

Explanation:
* Is limited to a single Protection Domain (Option D): A Fault Set is a logical subdivision within a Protection Domain. You cannot span a Fault Set across multiple Protection Domains.
* Ensures data availability (Option B): The purpose of a Fault Set is to simulate "Rack Awareness." PowerFlex ensures that copies of data (mirrors) are never placed in the same Fault Set. If Fault Set 1 (Rack 1) fails completely, the system guarantees that the secondary copies of that data exist in Fault Set
2 or 3, keeping the data available.
Note on C: While a cluster using Fault Sets requires 3+ nodes total, the definition of the Fault Set itself is about availability (B) and its hierarchy (D).

NEW QUESTION # 87
What is the minimum number of nodes required for creating a Fault Set in PowerFlex?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:
* 6 Nodes: To utilize the Fault Set feature (which provides higher availability than standard SDS grouping, typically for rack awareness), PowerFlex requires a minimum configuration.
* The Math:
* A Protection Domain requires a minimum of 3 Fault Sets to support the 2-copy mirroring (Primary, Secondary, and a third location for rebuilding if a set fails).
* Dell PowerFlex engineering requirements state that each Fault Set must contain at least 2 SDS nodes to ensure local redundancy and performance balance within the set.
* $3 \text{ Fault Sets} \times 2 \text{ Nodes} = 6 \text{ Nodes}$ minimum.
