preparation and dedication, candidates can Pass Identity-and-Access-Management-Architect Exam and earn this valuable certification.

## Salesforce Certified Identity and Access Management Architect Sample Questions (Q212-Q217):

### NEW QUESTION # 212

An Identity architect works for a multinational, multi-brand organization. As they work with the organization to understand their Customer Identity and Access Management requirements, the identity architect learns that the brand experience is different for each of the customer's sub-brands and each of these branded experiences must be carried through the login experience depending on which sub-brand the user is logging into.

Which solution should the architect recommend to support scalability and reduce maintenance costs, if the organization has more than 150 sub-brands?

- A. Create a community subdomain for each sub-brand and customize the look and feel of the Login page for each community subdomain to match the brand.
- B. Create a separate Salesforce org for each sub-brand so that each sub-brand has complete control over the user experience.
- C. Use Audiences to customize the login experience for each sub-brand and pass an audience ID to the community during the OAuth and Security Assertion Markup Language (SAML) flows.
- **D. Assign each sub-brand a unique Experience ID and use the Experience ID to dynamically brand the login experience.**

**Answer: D**

Explanation:

To support scalability and reduce maintenance costs for a multinational, multi-brand organization, the architect should recommend assigning each sub-brand a unique Experience ID and using the Experience ID to dynamically brand the login experience.

Experience ID is a parameter that can be used to identify different brands or experiences within a single Experience Cloud site (formerly known as Community). Dynamic branding is a feature that allows Experience Cloud sites to display different branding elements, such as logos, colors, or images, based on the Experience ID or other criteria. This solution can provide a consistent and personalized brand experience for each sub-brand without creating multiple subdomains or orgs. References:

Experience ID, Dynamic Branding for Experience Cloud Sites

### NEW QUESTION # 213

An identity architect is implementing a mobile-first Consumer Identity Access Management (CIAM) for external users. User authentication is the only requirement. The user's email or mobile phone number should be supported as a username.

Which two licenses are needed to meet this requirement?

Choose 2 answers

- A. Identity Connect Licenses
- B. Email Verification Credits
- **C. SMS verification Credits**
- **D. External Identity Licenses**

**Answer: C,D**

### NEW QUESTION # 214

Universal Containers (UC) is using its production org as the identity provider for a new Experience Cloud site and the identity architect is deciding which login experience to use for the site.

Which two page types are valid login page types for the site?

Choose 2 answers

- **A. Login Discovery Page**
- B. Lightning Experience Page
- **C. Embedded Login Page**
- D. Experience Builder Page

**Answer: A,C**

### NEW QUESTION # 215

Universal Containers (UC) is building a customer community and will allow customers to authenticate using Facebook credentials. The first time the user authenticates using Facebook, UC would like a customer account created automatically in their Accounting system. The accounting system has a web service accessible to Salesforce for the creation of accounts. How can the Architect meet these requirements?

- A. Add an Apex callout in the registration handler of the authorization provider.
- B. Use JIT Provisioning to automatically create the account in the accounting system.
- C. Create a custom application on Heroku that manages the sign-on process from Facebook.
- D. Use OAuth JWT flow to pass the data from Salesforce to the Accounting System.

**Answer: A**

### NEW QUESTION # 216

Universal Containers (UC) has implemented SAML-BASED single Sign-on for their Salesforce application and is planning to provide access to Salesforce on mobile devices using the Salesforce1 mobile app. UC wants to ensure that single Sign-on is used for accessing the Salesforce1 mobile app. Which two recommendations should the architect make? Choose 2 answers

- A. Configure the embedded Web browser to use my domain URL.
- B. Use the existing SAML SSO flow along with Web server flow
- C. Configure the Salesforce1 app to use the my domain URL
- D. Use the existing SAML SSO flow along with user agent flow.

**Answer: A,C**

Explanation:

Explanation

To use SAML SSO for accessing the Salesforce1 mobile app, the architect should recommend configuring the embedded web browser to use the My Domain URL and configuring the Salesforce1 app to use the My Domain URL. Using the My Domain URL allows Salesforce to identify the identity provider and initiate the SSO process. Using the existing SAML SSO flow along with user agent flow or web server flow is not necessary because Salesforce Mobile Applications only work with service provider initiated setups.

Therefore, option B and D are the correct answers.
