## Cisco Conducting Threat Hunting and Defending using Cisco Technologies for CyberOps Sample Questions (Q75-Q80):

### NEW QUESTION # 75

A security team is performing threat modeling for a hybrid environment consisting of on-prem Active Directory and Azure AD. The team wants to identify how an attacker could move from a compromised cloud identity to full on-prem domain dominance. Which modeling focus is MOST appropriate?

- A. Conducting packet-level network flow analysis
- **B. Mapping trust relationships between identity systems**
- C. Enumerating CVEs affecting domain controllers
- D. Assigning CVSS scores to authentication mechanisms

**Answer: B**

Explanation:

The correct answer is mapping trust relationships between identity systems. Hybrid identity environments introduce complex trust boundaries that attackers routinely exploit.

Modern breaches increasingly involve identity pivoting, where attackers compromise a cloud identity and abuse synchronization, federation, or conditional access misconfigurations to escalate into on-prem Active Directory. These attack paths often do not rely on software vulnerabilities at all.

Option A is too narrow and focuses only on technical exploits. Option C measures severity but does not model movement. Option D analyzes traffic but does not explain privilege escalation pathways.

By mapping trust relationships—such as Azure AD Connect synchronization, service principals, hybrid admin roles, and conditional access exclusions—defenders can identify chained attack paths that enable privilege escalation without exploiting code.

From a threat hunting standpoint, this modeling enables:

- \* Hypothesis-driven hunts
- \* Detection of abnormal role assumptions
- \* Visibility into identity abuse

This approach aligns with attack path modeling, a critical evolution of traditional threat modeling for identity-centric environments. Therefore, option B is correct.

#### NEW QUESTION # 76

During which step of the Threat Hunting Process do threat hunters typically use security tools like SIEMs and EDR?

- A. Validating the hypothesis
- **B. Deploying security tools**
- C. Analyzing existing threat intelligence
- D. Identifying potential threats

**Answer: B**

#### NEW QUESTION # 77

What technique focuses on understanding and predicting the behavior of threat actors in order to better anticipate their actions?

- A. Log correlation
- **B. Behavioral analysis**
- C. Threat intelligence analysis
- D. Signature-based detection

**Answer: B**

#### NEW QUESTION # 78

When interpreting the tactics, techniques, and procedures of a threat actor, which of the following is most crucial?

- A. The specific malware variant used
- **B. The pattern of lateral movement within the network**
- C. The volume of data exfiltrated
- D. The time of day the attack occurred

**Answer: B**

#### NEW QUESTION # 79

What is a challenge often faced in threat actor attribution?

- A. Clear identification
- B. Predicting future attacks
- C. False Flags
- **D. Lack of data**

**Answer: D**
