

ITIL-4-Practitioner-Deployment-Management Kostenlos Downloden - ITIL-4-Practitioner-Deployment- Management Fragen Beantworten

Außerdem sind jetzt einige Teile dieser ZertPruefung ITIL-4-Practitioner-Deployment-Management Prüfungsfragen kostenlos erhältlich: <https://drive.google.com/open?id=1GBCiFIX0f4j1jXx0TmaLi9y6WPM4KZ08>

Das Ziel der Peoplecert ITIL-4-Practitioner-Deployment-Management Prüfungssoftware ist: Bei Ihrer Vorbereitung der Peoplecert ITIL-4-Practitioner-Deployment-Management Prüfung Ihnen die effektivste Hilfe zu bieten, um Ihre Geld nicht zu verschwenden und Ihre Zeit zu sparen. Unsere Software hat schon zahllose Prüfungsteilnehmer geholfen, Peoplecert ITIL-4-Practitioner-Deployment-Management Prüfung zu bestehen. Wenngleich die Bestehensquote sehr hoch ist, versprechen wir, dass wir alle Ihrer Gebühren für die Peoplecert ITIL-4-Practitioner-Deployment-Management Software erstatten wollen, falls Sie die Prüfung nicht bestehen. Wir tun so, um Sie beim Kauf unbesorgt zu machen.

Peoplecert ITIL-4-Practitioner-Deployment-Management Prüfungsplan:

Thema	Einzelheiten
Thema 1	Information and technology: This section of the exam measures the skills of a Service Transition Manager and explores how technology and information systems support deployment activities. It covers how tools and digital platforms can enhance the planning, tracking, and execution of deployment efforts, ultimately contributing to more reliable and streamlined service rollouts.
Thema 2	The ITIL Capability model: This section of the exam measures the skills of a Service Transition Manager and introduces how capability criteria contribute to developing and maturing Deployment Management practices. It focuses on aligning organizational capabilities with ITIL best practices to maintain consistency, quality, and effectiveness in service transitions.
Thema 3	Roles and competencies: This section of the exam measures the skills of a Change Implementation Lead and focuses on identifying essential roles within Deployment Management and the competencies needed to perform them effectively. It explores how to position deployment responsibilities within an organization and what skill sets are necessary to ensure deployment tasks are carried out successfully.
Thema 4	Practice success: This section of the exam measures the skills of a Change Implementation Lead and explains how to achieve success with Deployment Management through the application of ITIL guiding principles. It focuses on strategies that help establish a robust and value-driven deployment approach that aligns with business objectives and delivers measurable outcomes.

Thema 5	• Key concepts: This section of the exam measures the skills of a Service Transition Manager and covers the fundamental purpose of Deployment Management. It highlights why the structured management of service deployment is crucial for delivering new or modified services into the live environment efficiently while minimizing disruption and ensuring continuity in business operations.

ITIL-4-Practitioner-Deployment-Management Fragen Beantworten, ITIL-4-Practitioner-Deployment-Management Deutsche

Liebe Kandidaten, haben Sie schon mal gedacht, sich an der Kurse für die Peoplecert ITIL-4-Practitioner-Deployment-Management Zertifizierungsprüfung beteiligen? Eigentlich können Sie Maßnahmen treffen, die Prüfung nur einmal zu bestehen. Die Schulungsunterlagen von ZertPruefung ist eine gute Wahl. Das virtuelle Internet-Training und die Kurse enthalten viele Peoplecert ITIL-4-Practitioner-Deployment-Management Prüfungsaufgaben, die Ihnen zum erfolgreichen Bestehen der Prüfung verhelfen.

Peoplecert ITIL 4 Practitioner: Deployment Management ITIL-4-Practitioner-Deployment-Management Prüfungsfragen mit Lösungen (Q12-Q17):

12. Frage

[Use Tools and Techniques for Deployment]

Which automation tools should be used to transport and install configuration items into a test environment?

- A. Environment configuration and management tools
- B. Work planning and prioritization tools
- C. Service configuration management tools
- **D. Deployment tools**

Antwort: D

13. Frage

[Understand the Key Concepts of Deployment Management]

Which of the following BEST describes the scope of deployment management practice?

- A. The practice includes removing configuration documentation but not physical servers from the live environment
- B. The practice includes updating service documentation and transferring it to the live environment
- C. The practice includes deploying network hubs but not additional software licenses to the live environment
- **D. The practice includes deploying network hubs to and removing applications from staging environments**

Antwort: D

Begründung:

ITIL 4's deployment management practice encompasses moving hardware, software, and associated components into or out of environments (e.g., staging, testing, or production) to support service delivery. Option A, which includes deploying network hubs (hardware) and removing applications from staging environments (software), accurately reflects this broad scope across the service lifecycle.

Option A (The practice includes deploying network hubs to and removing applications from staging environments): Correct, as it covers both hardware and software movements across environments, aligning with ITIL 4's definition of deployment management.

Option B (The practice includes updating service documentation and transferring it to the live environment): Incorrect, as updating and transferring documentation is part of knowledge management, not deployment management.

Option C (The practice includes removing configuration documentation but not physical servers from the live environment):

Incorrect, as deployment management includes moving physical servers, and configuration documentation is managed elsewhere.

Option D (The practice includes deploying network hubs but not additional software licenses to the live environment): Incorrect, as software licenses may be part of deployment if required, and the option arbitrarily limits the scope.

14. Frage

[Measure and Improve Deployment Management]

An organization is aiming to achieve capability level 3 for the deployment management practice. What is an indication of the achievement of capability level 3?

- A. The deployment manager is able to report on the effectiveness of the deployment management practice
- B. Deployment models are developed and implemented
- **C. Employees from other practices understand how deployment activities are integrated into relevant workflows**
- D. The deployment management team regularly suggests and implements improvement opportunities

Antwort: C

Begründung:

ITIL 4 defines capability level 3 for a practice as achieving integration across the organization, where the practice is embedded into broader workflows and understood by related practices. For deployment management, an indication of reaching capability level 3 is when employees from other practices understand how deployment activities are integrated into relevant workflows (Option B). This demonstrates cross-functional alignment and maturity, showing that deployment management is not siloed but part of the organization's value streams.

Option A (The deployment management team regularly suggests and implements improvement opportunities): Incorrect, as continual improvement is characteristic of higher capability levels (e.g., level 4), not the defining feature of level 3.

Option B (Employees from other practices understand how deployment activities are integrated into relevant workflows): Correct, as level 3 focuses on integration and collaboration across practices, per ITIL 4's capability framework.

Option C (The deployment manager is able to report on the effectiveness of the deployment management practice): Incorrect, as reporting effectiveness is a general management task, not specific to level 3 maturity.

Option D (Deployment models are developed and implemented): Incorrect, as model development occurs at lower capability levels (e.g., level 1 or 2), not a hallmark of level 3.

15. Frage

[Apply Deployment Management Processes]

What key output of the 'deployment model development and improvement' process can be used to trigger implementation of a newly updated deployment model?

- **A. Change request**
- B. Updated knowledge management articles
- C. Lessons learned
- D. Deployment review reports

Antwort: A

Begründung:

In ITIL 4, the deployment model development and improvement process involves creating or refining models to enhance deployment effectiveness. Implementing a newly updated deployment model typically requires formal authorization and coordination, which is achieved through a change request (Option A). A change request initiates the process to assess, approve, and execute the model update in a controlled manner, ensuring alignment with organizational governance and other practices like change enablement.

Option A (Lessons learned): Incorrect, as lessons learned are an output for improving future processes, not a trigger for implementing a new model.

Option B (Change request): Correct, as a change request is the formal mechanism to propose and implement a new or updated deployment model, per ITIL 4's integration with change enablement.

Option C (Updated knowledge management articles): Incorrect, as knowledge articles support documentation and training but do not trigger implementation.

Option D (Deployment review reports): Incorrect, as review reports provide insights or feedback, not the authorization needed to implement a model.

16. Frage

[Engage with Stakeholders and Suppliers]

How will suppliers support the development of an organization's deployment management practice?

- A. Create deployment models based on those of other organizations
- B. Develop value streams for the organization utilizing deployment management where appropriate

- C. Define the practice success factors for deployment management
- D. Advise on the selection of tools that can be used across the organization's value streams

Antwort: D

Begründung:

Suppliers play a key role in supporting deployment management by providing expertise, tools, and services that align with organizational needs. Option A is correct, as suppliers often advise on selecting tools that integrate with the organization's value streams, ensuring consistency and scalability in deployment practices.

Option A (Advise on the selection of tools that can be used across the organization's value streams): Correct, as suppliers have industry knowledge and can recommend tools (e.g., CI/CD platforms) that enhance deployment efficiency across multiple value streams, aligning with ITIL 4's focus on value-driven tool selection.

Option B (Define the practice success factors for deployment management): Incorrect, as defining success factors is an internal responsibility of the organization, based on its goals and context, not a supplier's role.

Option C (Create deployment models based on those of other organizations): Incorrect, as deployment models should be tailored to the organization's unique needs, not copied from others, per ITIL 4's context-specific approach.

Option D (Develop value streams for the organization utilizing deployment management where appropriate): Incorrect, as developing value streams is an internal strategic activity, while suppliers typically provide support through tools or expertise, not by designing value streams.

17. Frage

.....

Weil es nicht leicht ist, die Peoplecert ITIL-4-Practitioner-Deployment-Management Zertifizierungsprüfung zu bestehen. So stellen geeignete Prüfungsmaterialien eine Garantie für den Erfolg dar. ZertPruefung wird Ihnen so schnell wie möglich die Peoplecert ITIL-4-Practitioner-Deployment-Management Prüfungsmaterialien und Fragen und Antworten bieten, so dass Sie sich gut auf die Peoplecert ITIL-4-Practitioner-Deployment-Management Zertifizierungsprüfung vorbereiten und die Prüfung 100% bestehen können. Mit ZertPruefung können Sie nicht nur einmalig ITIL-4-Practitioner-Deployment-Management Prüfung erfolgreich ablegen, sondern auch viel Zeit und Energie ersparen.
