Exam CIS-Discovery Tests & High CIS-Discovery Quality

If you want to improve yourself and make progress, if you are not satisfied with your present job, if you are still staying up for the CIS-Discovery exam day and night, please use our CIS-Discovery study materials. For with the high pass rate as 98% to 100%, we are confident to claim that our high quality and high efficiency of our CIS-Discovery Exam Torrent is unparalleled in the market. We provide the latest and exact CIS-Discovery exam quiz to our customers and you will be grateful if you choose our exam torrent and gain what you are expecting in the shortest time.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q87-Q92):

NEW QUESTION # 87

Where can you change the port number to protocol mapping for various protocols (WMI, SSH) for discovery. For Eg. if a company does SSH on a port other than the default port 22, where would you make a change in servicenow.

Response:

- A. Discovery Definition -> Port Probes
- **B. Discovery Definition -> IP Services**
- C. Discovery Definition -> Functionality Definitions
- D. Discovery Definition -> Probes

Answer: B

NEW QUESTION # 88

In a pattern operation, to correctly call the value of the execDir variable from tabular process variable, we should use _____.

Response:

- A. process(execDir)
- **B. \$process.execDir**
- C. \$process_execDir
- D. "process_execDir"

Answer: B

NEW QUESTION # 89

Which of the following executes the osquery commands on agents to gather attribute details from a CI?

- **A. Agent Collector**
- B. Agent listener
- C. Policies
- D. ACC for Discovery
- E. Check Definitions

Answer: A

Explanation:

Agent Collector is the component that executes the osquery commands on agents to gather attribute details from a CI. Agent Collector is a feature of the Agent Client Collector (ACC) for Discovery, which is an integration that enables ServiceNow Discovery to use osquery to collect data from Linux and Windows devices that have the Elastic Agent installed¹. Agent Collector allows you to define osquery queries and assign them to policies that target specific devices or groups of devices². Agent Collector then runs the queries on the agents and sends the results back to the instance, where they are processed by the Agent Listener and stored in the CMDB³.

for Discovery architecture - ServiceNow

NEW QUESTION # 90

The deletion strategy is set to 'Mark as absent' for related Disk CIs discovered via the Linux Server pattern. If a related Disk CI is discovered during the Linux Server discovery and then the same related Disk CI is not found the next time the Linux Server is discovered, the following will happen:

- A. The Linux Server CI Operational Status (operational_status) is set to Non-Operational.
- **B. The Disk Status CI (install_status) is set to Absent.**
- C. The Disk CI Operational Status (operational_status) is set to Non-Operational.
- D. The Linux Server CI Status (install_status) is set to Absent.

Answer: B

Explanation:

The deletion strategy 'Mark as absent' means that when a related CI that was previously discovered by a pattern is no longer found, the install_status attribute of that CI is set to Absent. This indicates that the CI is missing or removed from the network. The main CI (in this case, the Linux Server CI) is not affected by the deletion strategy of the related CI (in this case, the Disk CI)12.

NEW QUESTION # 91

When installing a MID Server on a Windows platform, which right must be associated when creating a Service Account?

- A. Domain Admin
- **B. Log on as service**
- C. Local Admin
- D. MID Server User Role

Answer: B

Explanation:

The Service Account for the MID Server must have the Log on as service right on the Windows platform.

This right allows the MID Server to run as a Windows service and communicate with the ServiceNow instance. The Service Account does not need to have local or domain admin rights, as these are not required for the MID Server functionality. The MID Server User Role is a role on the ServiceNow instance, not on the Windows platform, and it is used to control the access and permissions of the MID Server on the instance.

:

Correcting MID Server Windows service account user and permissions

What is a ServiceNow MID Server and how does it work?

Configure Windows MID Server service credentials

NEW QUESTION # 92

.....

So it requires no special plugins. The web-based Certified Implementation Specialist - Discovery (CIS-Discovery) practice exam software is genuine, authentic, and real so feel free to start your practice instantly with Certified Implementation Specialist - Discovery (CIS-Discovery) practice test.
