ACD201 Sample Questions Pdf | Cost Effective ACD201 Dumps

This is a gainful opportunity to choose ACD201 actual exam from our company. They are saleable offerings from our responsible company who dedicated in this line over ten years which helps customers with desirable outcomes with the help of our ACD201 Study Guide. Up to now, there are three versions of ACD201 exam materials for your reference. They are PDF, software and app versions. And we have free demos for you to download before you decide to purchase.

Appian Senior Developer Sample Questions (Q13-Q18):

NEW QUESTION # 13

You're refining a story regarding a highly regulated form, where information needs to be sent to a regulatory body at the end of each month to ensure that the business complies with laws and legislation. The story only concerns the creation of the form.

You need to create a form that captures information to comply with the regulatory requirements.

Which two questions should you ask the business? (Choose two.)

- A. What is the maximum length of each field?
- B. How often is the information sent to the regulatory body?
- C. Is the information sent to the regulatory body via an integration?
- D. What information does the regulatory body require?

Answer: A,D

Explanation:

Knowing what information the regulatory body requires ensures the form captures all necessary data for compliance.

Understanding the maximum length of each field guarantees that the data collected will meet validation and regulatory constraints.

NEW QUESTION # 14

You're designing a report to show the total number of cases per month grouped by region. A synced record exists for the data source.

Which design pattern is most appropriate in this case?

- A. Configure a!columnChartField() using a!columnChartConfig() with the case creation date as the primaryGrouping and the region as the secondaryGrouping.
- B. Configure a!pieChartField() using a!pieChartConfig() with the case creation date as the primaryGrouping and the region as the secondaryGrouping.
- C. Use a!queryRecordType() with a!aggregationFields() to group the case creation date by region into a local variable. Pass the local variable value into the data input of a!columnChartField()

Answer: C

Explanation:

Using a!queryRecordType() with a!aggregationFields() to group by case creation date and region, storing the result in a local variable and passing it to the data input of a!columnChartField() ensures efficient aggregation and flexible chart display for your report.

NEW QUESTION # 15

You're developing a record view for a case management system that enables users to upload files to a specific location within an external records application.

Your requirements are:

In this record view, there should be a record action that allows the user to upload a file to the interface and configure the metadata (name, author, file size) before submitting.

If the file is larger than 250MB, the user will be notified that the file will be uploaded overnight.

Once the file has been successfully uploaded, the file will appear on the record view and the user can interact with the file.

Which two pieces of user-facing information must be captured from this business process so that you can develop this record view? (Choose two.)

- A. The email of the system administrator so that an email can be sent to them if the integration fails.
- B. The location of where the file will be uploaded to in the external records application.
- C. The time of file upload if the file is less than 250MB.
- D. How the user wishes to interact with these files in the record view - as a grid or a series of card layouts.

Answer: B,D

Explanation:

You need to know the target location in the external records application to properly upload the file.

Understanding how users want to interact with files (grid or card layout) is essential for designing the record view interface.

NEW QUESTION # 16

You're developing a functionality to manage transactions for an insurance company. Each transaction can have multiple items where respective item type and item amount can be entered. The amount entered can be either negative or positive, and is a decimal data type with a precision of 8 and a scale of 2.

A maximum of 10 items can be entered for a transaction. Once all the items are entered, you need to calculate and show the sum of all items' total amounts at the transaction level.

What is the best way to calculate and display the sum of all item amounts?

- A. `text(sum(r!items.amount),"00.00")`
- B. `round(sum(r!items.amount),2)`
- C. `fixed(sum(r!items.amount),2,false())`

Answer: C

Explanation:

`fixed(sum(r!items.amount),2,false())` is the best option because it returns the sum as a text value formatted to exactly two decimal places, which is ideal for currency or financial amounts. This ensures the total displays correctly as a string, maintaining precision and formatting for both positive and negative values.

NEW QUESTION # 17

You're performing System Integration Testing on a client's application that integrates with an external system.

In this instance, you're testing the application's interactions with external integrations to ensure that data is being handled correctly between the two systems. However, this step has been done manually and is time-consuming.

What should you do to make this process more efficient?

- A. Utilize Appian-Locust to develop and execute performance tests on the systems integrations by scripting a scenario where multiple users are interacting with the external systems simultaneously.
- B. Utilize the Postman API Platform to test the integrations with the external system and Appian's web APIs through a defined set of test cases.
- C. Utilize FitNesse for Appian to perform automated functional testing on the workflows that include integrated systems through a defined set of test cases.

Answer: C

Explanation:

FitNesse for Appian is designed for automated functional testing of Appian workflows, including those that call external integrations. By building repeatable FitNesse test scripts that drive the end-to-end process, you can automatically verify that data is correctly sent

to - and returned from - the external system each time, greatly reducing the manual effort of system-integration testing.

NEW QUESTION # 18
