## WGU Cloud-Deployment-and-Operations Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Ensuring Scalability, Elasticity, and Backup Readiness: This section of the exam measures skills of Cloud Operations Specialists and covers implementing AWS features that support scalability, elasticity, and backup readiness. It focuses on enabling cloud systems to handle fluctuating workloads while maintaining continuity and ensuring critical data remains recoverable.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Optimizing Cost and Performance Baselines: This section of the exam measures skills of Cloud Operations engineers and covers determining the best balance between cost and performance using AWS services. It involves selecting suitable configurations and resource types to maintain efficient operations while avoiding unnecessary spending.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Cloud Service Deployment and Management: This section of the exam measures skills of Cloud Engineers and covers the technical knowledge required to deploy, manage, and operate cloud services. It focuses on understanding stability, scalability, backup processes, recovery methods, and general deployment practices. Candidates are expected to show they can handle provisioning, monitoring, and connectivity tasks needed to support cloud environments.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Automating Cloud Provisioning and Maintenance: This section of the exam measures skills of Cloud Operations engineers and covers the ability to automate provisioning tasks and ongoing maintenance activities. It emphasizes using automation tools to streamline cloud resource creation and lifecycle management. Students must demonstrate they can apply automation to maintain efficient cloud operations.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Configuring Cloud Network Connectivity: This section of the exam measures skills of Cloud Engineers and covers network connectivity within AWS environments, including setup, troubleshooting, and corrective actions. Candidates must show they can manage cloud networking in a way that ensures reliable communication between systems and services.</li></ul>

Topic 6	<ul style="list-style-type: none"> <li>• <b>Implementing Cloud Security and Compliance:</b> This section of the exam measures skills of Cloud Engineers and covers the use of AWS security tools to protect data and infrastructure. Candidates must demonstrate awareness of compliance needs and the ability to apply protective controls that align with industry and organizational standards.</li> </ul>

## **2026 The Best Reliable Cloud-Deployment-and-Operations Test Cram | Cloud-Deployment-and-Operations 100% Free Valid Exam Dumps**

Many candidates who take the qualifying exams are not aware of our Cloud-Deployment-and-Operations exam questions and are not guided by our systematic guidance, and our users are much superior to them. In similar educational products, the Cloud-Deployment-and-Operations quiz guide is absolutely the most practical. Also, from an economic point of view, our Cloud-Deployment-and-Operations Exam Guide Materials is priced reasonable, so the Cloud-Deployment-and-Operations test material is very responsive to users, user satisfaction is also leading the same products. You can deeply depend on our Cloud-Deployment-and-Operations exam guide materials when you want to get the qualification.

### **WGU Cloud Deployment and Operations Sample Questions (Q36-Q41):**

#### **NEW QUESTION # 36**

(An administrator successfully accesses an EC2 instance via SSH from a local computer then stops it and starts it. Following the restart, the EC2 instance is no longer accessible. Which solution should be used to resolve the issue?)

- A. Add a route to the route table associated with the EC2 instance subnet
- B. Change the IP address used to connect to the EC2 instance
- C. Change the port used to connect to EC2 instance
- **D. Add a rule to the security group associated with the NIC of the EC2 instance**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

After stopping and starting an EC2 instance, the public IP address may change (unless an Elastic IP is attached), but the security group rules remain intact. If the instance is no longer accessible via SSH, it's likely due to an inbound rule (e.g., for port 22) not being correctly configured or applied. Adding or verifying a rule in the security group associated with the network interface (NIC) to allow SSH (port 22) from the administrator's IP resolves this. The WGU Cloud Deployment and Operations Study Guide (Section 3.2, Security Groups) states, "Stopping and starting an EC2 instance may require verifying or adding an inbound SSH rule (port 22) in the security group if connectivity is lost due to IP or rule misconfiguration." Route table or IP changes are not the primary issue here.

#### **NEW QUESTION # 37**

(An administrator needs to create Systems Manager Automation documents to take action based on AWS Config rules. Which two file formats should be used? Choose 2 answers.)

- A. CSV
- **B. YAML**
- C. XML
- **D. JSON**

**Answer: B,D**

Explanation:

Systems Manager Automation documents can be created using JSON or YAML file formats to define workflows and actions based on AWS Config rules. These formats allow administrators to specify the steps and parameters for automation tasks, such as remediation actions triggered by Config rule evaluations. The WGU Cloud Deployment and Operations Study Guide (Section 5.1, Systems Manager Automation) states that both JSON and YAML are supported formats for writing Automation documents,

providing flexibility in scripting automation logic. XML and CSV are not supported formats for this purpose.

#### NEW QUESTION # 38

(What is a patch baseline attached to if it is not defined in Patch Manager?)

- A. Patch process
- B. Baseline data set
- C. Accelerate patch baseline
- **D. Default patch group**

**Answer: D**

Explanation:

If a patch baseline is not explicitly defined in Patch Manager, it is attached to the default patch group. This default group applies a preconfigured baseline with AWS-recommended patches, ensuring basic compliance for instances without custom baselines. The WGU Cloud Deployment and Operations Study Guide (Section 5.2, Patch Manager) states, "If no custom patch baseline is defined, instances are associated with the default patch group, which uses AWS-provided baseline settings for automatic patch approval." Options A, C, and D are not valid attachments for patch baselines.

#### NEW QUESTION # 39

(An administrator needs to set up self-managed permissions for AWS CloudFormation StackSet operations. Which two roles should be created in the administrator account and in the target accounts? Choose 2 answers.)

- A. In the administrator account, create an IAM role named `AWSCloudFormationStackSetExecutionRole`.
- **B. In each target account, create a service role named `AWSCloudFormationStackSetExecutionRole` that trusts the administrator account.**
- **C. In the administrator account, create an IAM role named `AWSCloudFormationStackSetAdministrationRole`.**
- D. In each target account, create a service role named `AWSCloudFormationStackSetAdministrationRole` that trusts the administrator account.

**Answer: B,C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To set up self-managed permissions for CloudFormation StackSet operations, two roles are required: in the administrator account, create an IAM role named `AWSCloudFormationStackSetAdministrationRole` to manage StackSet operations, and in each target account, create a service role named `AWSCloudFormationStackSetExecutionRole` that trusts the administrator account to execute the stacks. The WGU Cloud Deployment and Operations Study Guide (Section 5.4, StackSets) states, "For self-managed permissions, the administrator account requires the `AWSCloudFormationStackSetAdministrationRole`, while each target account needs the `AWSCloudFormationStackSetExecutionRole` with a trust relationship to the administrator account for stack deployment." Roles B and D are incorrectly named or misplaced.

#### NEW QUESTION # 40

(An administrator needs to deploy a NAT gateway in an existing VPC subnet. Which two tasks should this administrator perform during deployment? Choose 2 answers.)

- A. Assign a private IP address to the NAT gateway
- **B. Assign an elastic IP address to the NAT gateway**
- C. Configure the access control list associated with the subnet
- **D. Configure the route table associated with the subnet**

**Answer: B,D**

Explanation:

To deploy a NAT gateway in an existing VPC subnet, the administrator must assign an elastic IP address to the NAT gateway for public internet access and configure the route table associated with the subnet to route traffic through the NAT gateway. The WGU

Cloud Deployment and Operations Study Guide (Section 3.2, NAT Gateway) states, "Deployment of a NAT gateway requires an elastic IP address for outbound internet connectivity and a route table update to direct private subnet traffic to the NAT gateway (e.g., 0.0.0.0/0 via NAT)." Private IP assignment and ACL configuration are not required steps.
