

# Dumps IBM C1000-189 Cost | Valid C1000-189 Exam Sample

P.S. Free 2026 IBM C1000-189 dumps are available on Google Drive shared by TorrentValid: [https://drive.google.com/open?id=1DZa1Z4wL5mweWxOuyloTxT9TjRY\\_EDHs](https://drive.google.com/open?id=1DZa1Z4wL5mweWxOuyloTxT9TjRY_EDHs)

Our website gives detailed guidance to our customers for preparation of C1000-189 actual test and take them towards the direction of achievement. Each of our IBM exam preparation materials is designed by IT professionals in order to improve your particular skills. Our C1000-189 Practice Questions will boost the confidence of candidates for appearing in the real exam.

## IBM C1000-189 Exam Syllabus Topics:

| Topic   | Details   |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"><li>• Integration: This section of the exam measures the skills of Integration Engineers and assesses their proficiency in connecting Instana with external monitoring and automation tools. Candidates must demonstrate knowledge of integrating agent-based systems such as Omegamon, ITM, and ITCAM, as well as external platforms like Prometheus and Grafana. The section also includes configuring alert channels, automation actions, and utilizing the Instana REST API to support customized workflows and data visibility.</li></ul>  |
| Topic 2 | <ul style="list-style-type: none"><li>• Installation: This section of the exam measures the skills of System Implementation Specialists and focuses on installing and deploying Instana across different environments. It includes installing the Instana backend, deploying and configuring agents, and migrating existing Instana setups. Candidates will also demonstrate their ability to implement Synthetic Monitoring and manage Points of Presence (PoPs) effectively for end-to-end performance validation.</li></ul>  |
| Topic 3 | <ul style="list-style-type: none"><li>• Configuration: This section of the exam measures the skills of DevOps Administrators and evaluates their ability to configure and optimize Instana operational settings. It involves setting up business process monitoring, configuring both cloud and serverless agents, and defining agent proxy parameters. Candidates will learn to implement various technologies and sensors, manage OpenTelemetry integrations, set up smart alerts, create service naming rules, and define custom SLIs and payloads for alert channels. Managing licenses and ensuring proper configuration of alerts and notifications are also key components of this domain.</li></ul> |
| Topic 4 | <ul style="list-style-type: none"><li>• Operations: This section of the exam measures the skills of Application Monitoring Specialists and covers daily operational tasks for managing Instana environments. It includes configuring website and application monitoring, handling synthetic monitoring, and creating incidents, issues, and alerts. Candidates will analyze infrastructure performance, set maintenance windows, and design custom dashboards. They are also expected to interpret golden signals, evaluate alerts, use analytics, and perform backup or restore operations to maintain optimal system performance.</li></ul>   |

|         |  |
|---------|--|
| Topic 5 | <ul style="list-style-type: none"><li>• <b>Security and Compliance:</b> This section of the exam measures the skills of IT Security Analysts and focuses on the data protection and compliance aspects of Instana deployment. Candidates must describe and implement data retention policies, plan for regulatory compliance, secure APIs, manage user access, and interpret audit logs. The goal is to ensure secure system configurations that align with organizational and regulatory standards.</li></ul> |
|---------|--|

## Free PDF 2026 IBM C1000-189: Useful Dumps IBM Instana Observability v1.0.277 Administrator - Professional Cost

As is known to us, there are best sale and after-sale service of the C1000-189 certification training dumps all over the world in our company. Our company has employed a lot of excellent experts and professors in the field in the past years, in order to design the best and most suitable C1000-189 latest questions for all customers. More importantly, it is evident to all that the C1000-189 Training Materials from our company have a high quality, and we can make sure that the quality of our products will be higher than other study materials in the market. If you want to pass the C1000-189 exam and get the related certification in the shortest time, choosing the C1000-189 training materials from our company will be in the best interests of all people.

### IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q41-Q46):

#### NEW QUESTION # 41

Which protocol does an agent use to send the data to the backend?

- A. NFS
- **B. HTTPS**
- C. FTP
- D. SSH

**Answer: B**

Explanation:

IBM Instana agents use HTTPS, the industry standard secure protocol, to transmit telemetry data to Instana's backend servers or clusters. Instana documentation says: "All agent-to-backend traffic is encrypted and transmitted via HTTPS, meeting data confidentiality and compliance requirements." The use of HTTPS prevents unauthorized data interception by using strong TLS encryption on every packet exchanged between agent and backend, regardless of whether the deployment is on-premises or SaaS. FTP, SSH, and NFS are protocols for file transfer, system access, or storage mounting but are never used for telemetry transmission in Instana's architecture. Secure HTTP is essential for privacy by design, is policy-enforced, and supports audit-friendly observability in all supported Instana versions per IBM standards.

#### NEW QUESTION # 42

What is the purpose of creating a custom service rule in Instana?

- A. To set a global service name for all calls
- **B. To map services using existing meta-information of the infrastructure component**
- C. To create a manual service configuration
- D. To apply the service.name tag of the infrastructure component

**Answer: B**

Explanation:

IBM Instana Observability enables users to create custom service rules to precisely associate telemetry with logical services using meta-information already present in infrastructure components. The documentation specifies: "Custom service rules enable mapping of discovered entities to meaningful service constructs, using labels, tags, or annotations present on infrastructure components." This supports the grouping and visualization of traffic/metrics for actual business workflows rather than default technical boundaries. By analyzing meta-data, such as Kubernetes labels, docker tags, or VM metadata, Instana automatically maps relevant requests and

traces to the defined service names, improving observability and simplifying troubleshooting. Global service naming (A) and manual configuration (C) do not leverage infrastructure metadata and are not scalable in dynamic environments. Option D relies only on a `service.name` tag, missing broader meta-information mapping capabilities. The verified documentation supports answer B as the sole comprehensive approach for dynamic service discovery within Instana.

#### NEW QUESTION # 43

Which HTTP header is automatically collected?

- A. `x-client-id`
- B. `Instana-probe`
- C. `Instana-id`
- D. `X-Instana-Service`

**Answer: D**

Explanation:

Instana traces and analyzes every request. Services and endpoints are automatically discovered, and relationships between services, endpoints, and your infrastructure are autocorrelated and stored in our Dynamic Graph.

Based on the data that is collected from tracers and sensors, KPIs are calculated for calls, latency, and erroneous calls. KPIs help you discover the health of every individual service and then the health of your entire infrastructure.

Services are a part of application monitoring and provide a logical view of your system. Services are derived from infrastructure entities such as hosts, containers, and processes. Incoming calls are correlated to infrastructure entities and enriched with infrastructure data; for example, the Kubernetes pod label or SpringBoot application name. After this infrastructure-linking processing step, a service mapping step maps the enriched calls to generate a service name per call based on a set of rules. Instana comes with an extensive set of predefined rules to generate the best possible service name for you automatically. To fine-tune the service mapping, you can create your own custom rules, see [customize service mapping](#).

#### NEW QUESTION # 44

Which language is primarily used for writing Synthetic monitoring API scripts in Instana?

- A. Python
- B. Go
- C. Java
- D. `JavaScript`

**Answer: D**

Explanation:

Instana's Synthetic Monitoring module allows administrators to script user journeys and API checks to validate service performance and uptime. According to official IBM documentation, "Synthetic monitoring API scripts use JavaScript as the scripting language for configuring user flows and custom API tests." Instana has designed its synthetic user interface to interpret JavaScript natively which provides powerful, flexible constructs for simulating user interactions, custom API payloads, test logic, and error handling. This ensures broad compatibility with real browser environments and highly customizable synthetic scenarios. Java, Python, and Go are not supported for browser-based or synthetic API scripting in Instana's synthetic monitors. JavaScript is chosen for its ubiquity and ease of integration with DOM-like and API interaction patterns, supporting the most common web-based automation needs as described in the documentation.

#### NEW QUESTION # 45

Which environment requires an air-gapped Instana installation?

- A. `An environment with restricted or no access to any external network or internet`
- B. An environment that allows unrestricted data transfer internally
- C. An environment with high-speed internet connectivity
- D. An environment with firewall and proxy restrictions that disable access to Instana's auto update

**Answer: A**

Explanation:

According to the IBM Instana Observability documentation, an air-gapped installation is required when your environment is disconnected from the internet or has no access to external networks. The documentation states: "Air-gapped and restricted environments require deploying Instana without any connection to public repositories or backend services, assuring full isolation for compliance and regulatory requirements." The air-gapped setup ensures sensitive data or system configurations are never exposed outside the organization's internal trusted boundaries, making it mandatory for government, defense, or tightly regulated industries. Standard installation processes, including auto-update features and remote license verification, are replaced in air-gapped deployments with manual artifact and key management, as file transfers and package updates must be handled strictly within the controlled environment. The option described in B (high-speed internet) or D (unrestricted internal transfer) does not trigger air-gapping, while option A may require proxy or firewall configuration but is not entirely air-gapped unless full external access is blocked.

## NEW QUESTION # 46

.....

The TorrentValid is one of the leading brands that have been helping IBM C1000-189 Certification aspirants for many years. Hundreds of IBM Instana Observability v1.0.277 Administrator - Professional exam applicants have achieved the IBM Instana Observability v1.0.277 Administrator - Professional in Procurement and Supply IBM certification. All these successful IBM test candidates have prepared with real and updated IBM Instana Observability v1.0.277 Administrator - Professional in Procurement and Supply IBM Questions of TorrentValid. If you also want to become IBM Instana Observability v1.0.277 Administrator - Professional in Procurement and Supply IBM certified, you should also prepare with our IBM Instana Observability v1.0.277 Administrator - Professional actual exam questions.
