

Newest JN0-650 Valid Exam Topics, JN0-650 PDF Dumps Files

BONUS!!! Download part of Itcertmaster JN0-650 dumps for free: <https://drive.google.com/open?id=1bnP6PAzcmV0rnW7FmSWtNJHd6aCilYw>

Choosing our JN0-650 exam quiz will be a wise decision that you make, because this decision may have a great impact in your future development. Having the JN0-650 certificate may be something you have always dreamed of, because it can prove that you have certain strength. Our JN0-650 Exam Questions can provide you with services with pretty quality and help you obtain a certificate. The quality of our JN0-650 learning materials can withstand the test of practice.

According to the survey, the average pass rate of our candidates has reached 99%. High passing rate must be the key factor for choosing, which is also one of the advantages of our JN0-650 real study dumps. In order to get more chances, more and more people tend to add shining points, for example a certification to their resumes. What you need to do first is to choose a right JN0-650 Exam Material, which will save your time and money in the preparation of the JN0-650 exam. Our JN0-650 latest questions is one of the most wonderful reviewing Enterprise Routing and Switching, Professional (JNCIP-ENT) study training dumps in our industry, so choose us, and together we will make a brighter future.

JN0-650 PDF Dumps Files | Latest JN0-650 Test Question

There are thousands of customers have passed their exam successfully and get the related certification. After that, all of their Enterprise Routing and Switching, Professional (JNCIP-ENT) exam torrents were purchase on our website. In addition to the industry trends, the JN0-650 Test Guide is written by lots of past materials' rigorous analyses. The language of our study materials are easy to be understood, only with strict study, we write the latest and the specialized study materials. We want to provide you with the best service and hope you can be satisfied.

Juniper JN0-650 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> IP Telephony Features: This section focuses on features supporting VoIP deployments including Power over Ethernet, LLDP LLDP-MED protocols, and voice VLAN implementation.
Topic 2	<ul style="list-style-type: none"> Class of Service (CoS): This domain covers QoS mechanisms in Junos including CoS processing, header fields, forwarding classes, classification, policers, schedulers, drop profiles, shaping, and rewrite rules.

Topic 3	<ul style="list-style-type: none"> • Ethernet Switching and Spanning Tree: This section covers advanced Layer 2 switching including filter-based VLANs, private VLANs, MVRP, Layer 2 tunneling via Q-in-Q and L2PT, plus MSTP and VSTP protocols.
Topic 4	<ul style="list-style-type: none"> • Layer 2 Authentication and Access Control: This domain examines network access control mechanisms including 802.1x, MAC RADIUS, captive portal, server fail fallback, guest VLANs, and multi-method authentication considerations.
Topic 5	<ul style="list-style-type: none"> • Interior Gateway Protocols (IGPs): This domain covers internal routing protocols operating within a single autonomous system, including OSPFv2, OSPFv3, and routing policy implementation, along with configuration, troubleshooting, and monitoring skills.

Juniper Enterprise Routing and Switching, Professional (JNCIP-ENT) Sample Questions (Q72-Q77):

NEW QUESTION # 72

Which two statements are true about 802.1Z dynamic filters based on RADIUS attributes? (Choose two.)

- A. Filters can be defined on the authentication server and deployed using vendor-specific attributes.
- B. Filters can be defined on an automation framework and deployed when triggered by an authentication syslog message.
- C. Filters can be defined on the network management system and deployed using vendor-specific attributes.
- D. Filters can be defined on the switch and deployed upon authentication.

Answer: A,D

NEW QUESTION # 73

Your enterprise network uses routing instances to support multitenancy. Your Junos devices use BGP to peer to multiple BGP devices. You must ensure that load balancing is achieved within the routing instance.

Which two statements would accomplish this task? (Choose two.)

- A. Configure the multipath option at the [edit protocols bgp group] hierarchy.
- B. Configure the multipath option at the [edit routing-instances routing-options] hierarchy.
- C. Configure the multipath option at the [edit protocols bgp group neighbor] hierarchy.
- D. Configure a load-balance per-packet policy and apply it at the [edit routing-options forwarding-table] hierarchy.

Answer: A,B

NEW QUESTION # 74

You have configured CoS on a Junos device. A packet is classified as best effort by a behavior aggregate (BA) classifier, and as expedited forwarding by a multifield (MF) classifier.

Which statement is true in this scenario?

- A. The packet will be placed into the queue which is least congested.
- B. The packet will be placed in a queue associated with the MF classifier.
- C. The packet will be placed into the queue that has the most bandwidth assigned to it.
- D. The packet will be placed in a queue associated with the BA classifier.

Answer: B

NEW QUESTION # 75

Which statement is true regarding virtual links in OSPF?

- A. Virtual links have a metric of 0.
- B. Virtual links connect VRF routing instances to an OSPF domain.
- C. Virtual links connect a router to Area 0 when a physical link to Area 0 is not available.

- D. Virtual links are used to carry external LSAs across a stub area.

Answer: C

NEW QUESTION # 76

Which two EVPN types advertise an ESI without advertising a MAC address? (Choose two.)

- A. Type 4
- B. Type 2
- C. Type 3
- D. Type 1

Answer: A,D

Explanation:

In an EVPN-VXLAN environment, different BGP route types serve distinct purposes in building the control plane. The Ethernet Segment Identifier (ESI) is a unique 10-byte identifier used to represent a multi-homed segment.

* Type 1: Ethernet Auto-Discovery (A-D) Route (Option A): This route type is essential for multi-homing scenarios. It carries the ESI to support features like fast convergence and aliasing. By advertising an A-D route per Ethernet Segment, a PE tells other routers that it is connected to that specific ESI. It does not carry individual host MAC addresses; instead, it provides a "mass withdraw" mechanism to quickly update paths if the entire segment goes down.

* Type 4: Ethernet Segment Route (Option D): This route is used exclusively for Designated Forwarder (DF) election. It advertises the existence of an ESI and the ES-Import Route Target to all other PE routers. This allows PE routers connected to the same multi-homed segment to discover each other automatically and elect a DF to handle BUM traffic. Like Type 1, it focuses on the segment identity and does not include MAC addresses.

* Type 2: MAC/IP Advertisement Route (Option B): This is the primary route used for host reachability. It must include a MAC address (and optionally an IP). While it also includes the ESI to indicate which segment the host is behind, its primary function is MAC advertisement.

* Type 3: Inclusive Multicast Ethernet Tag Route (Option C): This route is used for VTEP discovery and building the replication list for BUM traffic. It identifies the VTEP's IP and the VNI, but it does not carry the ESI or MAC addresses.

NEW QUESTION # 77

.....

Our JN0-650 study dumps are suitable for you whichever level you are in right now. Whether you are in entry-level position or experienced exam candidates who have tried the exam before, this is the perfect chance to give a shot. High quality and high accuracy JN0-650 real materials like ours can give you confidence and reliable backup to get the certificate smoothly because our experts have extracted the most frequent-tested points for your reference, because they are proficient in this exam who are dedicated in this area over ten years. If you make up your mind of our JN0-650 Exam Questions after browsing the free demos, we will staunchly support your review and give you a comfortable and efficient purchase experience this time.
