2026 AP-202 Exam Exercise 100% Pass | Pass-Sure New Study AP-202 Questions: B2B Commerce for Developers Accredited Professional

Free demos of PracticeTorrent AP-202 exam questions are available which you can download easily. Just choose the right PracticeTorrent AP-202 exam questions format and download the AP-202 exam product demo free of cost. Check the top features of AP-202 Exam Questions and if you feel that the PracticeTorrent B2B Commerce for Developers Accredited Professional (AP-202) certification exam practice material can work with you then take your buying decision and download it accordingly. Best of luck!!!

Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q108-Q113):

NEW QUESTION # 108

A developer attempts to export data from an org by launching Data Loader, selecting a standard entity, clicking the "Select All Fields" button and clicking the Finish button. The developer finds that the CustomField_c field they added to the entity has no values under the header in the CSV file output. What is the root cause?

- A. The user does not have rights to the custom field
- B. The field is not populated
- C. The developer does not have access to the object's metadata
- D. The developer does not have the correct JDK that is recommended by Salesforce and this is known to cause issues with exporting custom attributes

Answer: A

Explanation:

The root cause of why the CustomField_c field they added to the entity has no values under the header in the CSV file output is that the user does not have rights to the custom field. A user's access to a field is determined by their profile and permission sets, which define their field-level security settings. Field-level security settings control whether a user can see, edit, or delete the value for

a particular field on an object. If a user does not have access to a field, they will not be able to view or modify its value in any interface, including Data Loader. Data Loader is a tool that allows users to import or export data between Salesforce and CSV files. When using Data Loader to export data from an org, Data Loader will only include fields that are accessible to the user based on their field-level security settings. If a user does not have access to a field, Data Loader will not include that field in the CSV file, neither as a column header nor as a value. The developer does not have the correct JDK that is recommended by Salesforce and this is known to cause issues with exporting custom attributes is not the root cause of why CustomField__c has no values under the header in the CSV file output, as it is not related to field access or Data Loader functionality. The developer does not have access to the object's metadata is not the root cause either, as it is not related to field access or Data Loader functionality. The object's metadata defines its structure and properties, such as fields, relationships, and layouts. The field is not populated is not the root cause either, as it contradicts the fact that CustomField__c has no column header in the CSV file output. If the field was not populated but accessible to the user, Data Loader would still include CustomField__c as a column header in the CSV file, but leave its values blank. NEW QUESTION # 109

Which technique is used by Lightning Web Components to provide areas of swappable, customizable content?

- A. `<slot>` elements
- B. CSS classes
- C. MutationObservers
- D. JQuery templates

Answer: A

Explanation:

Lightning Web Components (LWC) use `<slot>` elements to define areas within the component's template where content can be inserted dynamically. This feature, part of the Web Components standard, allows for the creation of customizable and reusable components. Salesforce developer documentation on LWC outlines the use of slots to build flexible component interfaces, enabling developers to design components that can adapt to various content structures and layouts.

NEW QUESTION # 110

What two things happen with the Cart during tax implementation?

- A. New entries are written to the Cart
- B. Previous entries are copied to another object
- C. Previous entries are deleted from the Cart
- D. New entries are written to the Order Summary

Answer: A,C

Explanation:

Two things that happen with the cart during tax implementation are that new entries are written to the cart and previous entries are deleted from the cart. A tax implementation is an integration that calculates and applies tax rates and amounts to a cart or an order based on various factors, such as product type, price, quantity, location, and tax rules. A tax implementation can use either an external tax service provider or custom Apex code to perform the tax calculation. When a tax implementation is invoked for a cart, it writes new entries to the cart with a type of Charge and a charge type of Tax. These entries represent the tax amounts and adjustments that are applied to the cart. Before writing new entries to the cart, the tax implementation deletes any existing entries with a type of Charge and a charge type of Tax from the cart. This ensures that the tax calculation is accurate and up-to-date based on the current state of the cart and avoids any conflicts or inconsistencies with previous tax entries. Previous entries are not copied to another object or modified with the new tax calculation, as these are not valid actions for handling existing tax entries. NEW QUESTION # 111

How can the display of CC Menu Items be customized for different users?

- A. `cc_hk_Category` extension to post-process any cached menu items
- B. `cc_hk_Menu` extension to post-process any cached menu items

- C. cc_hk_Category extension to pre-process which category items are cached as menu items
- D. cc_hk_Menu extension to pre-process which menu items are cached

Answer: B

Explanation:

The display of CC Menu Items can be customized for different users by using the cc_hk_Menu extension to post-process any cached menu items. This extension allows modifying the menu items based on the user context, such as the user role, account, or cart. For example, the extension can hide or show certain menu items based on the user's permissions or preferences.

NEW QUESTION # 112

Northern Tail Outfitters (NTO) is converting an existing aura component into a Lightning Web Component. The aura component has the following source code:

□ What is the equivalent of this code in a Lightning Web Component?

- A.
- B.
- C.
- D.

Answer: C

Explanation:

The equivalent of this code in a Lightning web component is option B. Option B uses the @api decorator to expose firstName as a public property of the Lightning web component and communicate it with other components or services. The @api decorator is a decorator that marks a property or method as public, which means that it can be accessed by other components or services that use or consume this component. The @api decorator also makes the property reactive, which means that it can track changes and update the component accordingly. In option B, firstName is exposed as a public property using the @api decorator and passed to the child element using an attribute. Option A is incorrect because it uses an invalid syntax for exposing firstName as a public property. The @api decorator should be used before the property declaration, not after it. Option C is incorrect because it uses an invalid syntax for exposing firstName as a public property. The @api decorator should be used with parentheses, not without them. Option D is incorrect because it uses an invalid syntax for exposing firstName as a public property. The @api decorator should be used with camel case, not with hyphens. Salesforce Lightning Web Components Developer Guide: Communicate with Properties, Lightning Web Components Developer Guide: Decorators

NEW QUESTION # 113

.....

Have you ever used PracticeTorrent Salesforce AP-202 Dumps? The braindump is latest updated certification training material, which includes all questions in the real exam that can 100% guarantee to pass your exam. These real questions and answers can lead to some really great things. If you fail the exam, we will give you FULL REFUND. PracticeTorrent practice test materials are used with no problem. Using PracticeTorrent exam dumps, you will achieve success.

New Study AP-202 Questions: <https://www.practicetorrent.com/AP-202-practice-exam-torrent.html>

You know, although you can study the knowledge about Salesforce Developer AP-202 exam test from the books or some resources on hand, and may success pass with hard efforts, Many people have successfully realized economic freedom after getting the AP-202 certificate and changing a high salary job, Important Notes: You can immediately download AP-202 PDF from "My Account" under the "My Downloadable Product" section after you place your order, Salesforce AP-202 Exam Exercise You need compellent certification to highlight yourself.

If a child acquires one gene, the child is also a carrier, AP-202 Some critics argue that free software undermines the service that proprietary commercial software vendors depend on.
