, Bytes: 84
```

You are validating bidirectional traffic flows through your IPsec tunnel. The 4546 session represents traffic being sourced from the remote end of the IPsec tunnel. The 4547 session represents traffic that is sourced from the local network destined to the remote network.

Which statement is correct regarding the output shown in the exhibit?

- A. The session information indicates that the IPsec tunnel has not been established
- B. The local gateway address for the IPsec tunnel is 10.20.20.2
- C. The remote gateway address for the IPsec tunnel is 10.20.20.2
- D. NAT is being used to change the source address of outgoing packets

Answer: C

NEW QUESTION # 125

NEW QUESTION # 126

Exhibit.

```
user@srx# show system security-profil
p-1 {
    policy {
        maximum 100;
        reserved 50;
    }
    zone {
        maximum 100;
        reserved 50;
    }
    nat-nopat-address {
        maximum 115;
        reserved 100;
    }

    nat-static-rule {
        maximum 125;
        reserved 100;
    }
}

[edit]
user@srx# show tenants
c-1 {
    security-profile {
```

Referring to the exhibit, which two statements are true? (Choose two.)

- A. The c-1 TSYS can use security flow resources up to the system maximum.
- B. The c-1 TSYS cannot use any security flow resources.
- C. The c-1 TSYS has no reservation for the security flow resource.
- D. The c-1 TSYS has a reservation for the security flow resource.

Answer: A,D

Explanation:
The system security profile named sp-1 has designated resources for policies and zones with a maximum of 100 and a reservation of 50 each. For NAT with no port address translation (nat-nopat- address), there is a maximum of 115 and a reservation of 100, and for static NAT rules (nat-static-rule), there is a maximum of 125 with 100 reserved.
When considering tenant systems, the profile applied (sp-1) will dictate the resources available to the tenant system named c-1.
The c-1 TSYS has a reservation for the security flow resource. - This would be true if the 'security flow resource' refers to policies and zones since there are reservations made in the profile sp-1.
The c-1 TSYS can use security flow resources up to the system maximum. - This is generally true for any tenant system unless there are explicit limits set that are lower than the system maximum.

NEW QUESTION # 127
You want to create a connection for communication between tenant systems without using physical revenue ports on the SRX Series device.
What are two ways to accomplish this task? (Choose two.)

- A. Use an external router.
- B. Use a secure wire.

- C. Use a point-to-point logical tunnel.
- D. Use an interconnect VPLS switch.

Answer: C,D
