We provide you with two kinds of consulting channels if you are confused about some questions on our CloudSec-Pro study materials. You can email us or contact our online customer service. We will reply you as soon as possible. You are free to ask questions about CloudSec-Pro training prep at any time since that we are working 24/7 online. Our staff is really very patient and friendly. They are waiting to give you the most professional suggestions on our CloudSec-Pro exam questions.

Palo Alto Networks CloudSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Security Operations Center (SOC) Fundamentals: This domain covers the foundational components of a SOC, including team roles, tools, and technologies used in day-to-day security operations. It also addresses how AI • ML and threat intelligence support incident response, categorization, and prioritization.
Topic 2	<ul style="list-style-type: none"> • Cloud Posture Security: This domain examines the tools and practices used to assess and manage cloud security posture, spanning CSPM, KSPM, AI-SPM, and DSPM. It also covers agentless scanning, identity security, vulnerability management, unified compliance, and the role of Posture Security Management Modules.
Topic 3	<ul style="list-style-type: none"> • Cloud Runtime Security: This domain addresses the protection of cloud workloads during active operation, covering cloud workload protection, detection and response, web application and API security, and vulnerability management. It also includes the processes involved in deploying and managing security agents.
Topic 4	<ul style="list-style-type: none"> • Application Security: This domain covers security practices integrated throughout the software development lifecycle, including application security posture management, CI • CD pipeline security, software composition analysis, IaC security, and secrets scanning. It also explores real-world application security use cases and scan management.
Topic 5	<ul style="list-style-type: none"> • Cortex Fundamentals: This domain focuses on the core features of the Cortex Cloud platform, including indicator types, log management, asset inventory, compliance, and data protection. It also covers how to create reports and dashboards and how data sources are ingested into the platform.

100% Pass Quiz Palo Alto Networks - CloudSec-Pro Updated Reliable Test

Tips

Getting the Palo Alto Networks Cloud Security Professional (CloudSec-Pro) certification exam is necessary in order to get a job in your desired tech company. Success in the Palo Alto Networks Cloud Security Professional certification exam gives you an edge over the others because you will have certified skills. The Palo Alto Networks Cloud Security Professional (CloudSec-Pro) certification exam badge will make a good impression on the interviewer. Most of the people planning to attempt the Palo Alto Networks Cloud Security Professional (CloudSec-Pro) exam are confused that how will they prepare and pass Palo Alto Networks Cloud Security Professional (CloudSec-Pro) exam with good grades.

Palo Alto Networks Cloud Security Professional Sample Questions (Q92-Q97):

NEW QUESTION # 92

A customer wants to turn on Auto Remediation.

Which policy type has the built-in CLI command for remediation?

- A. Network
- **B. Config**
- C. Audit Event
- D. Anomaly

Answer: B

Explanation:

Reference: <https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/prisma-cloud-policies/create-a-policy.html>

In Prisma Cloud, Config policies have built-in CLI commands for auto-remediation. These policies help in identifying misconfigurations within cloud environments and can automatically execute remediation commands to correct the configurations without manual intervention. This feature is part of Prisma Cloud's comprehensive approach to maintaining cloud security posture by ensuring that cloud resources are configured in accordance with best practices and compliance standards.

NEW QUESTION # 93

The attempted bytes count displays?

- **A. traffic that is either denied by the security group or firewall rules or traffic that was reset by a host or virtual machine that received the packet and responded with a RST packet.**
- B. traffic denied by the security group or traffic that was reset by a host or virtual machine that received the packet and responded with a RST packet.
- C. traffic that is either denied by the security group or firewall rules.
- D. traffic that is either denied by the firewall rules or traffic that was reset by a host or virtual machine that received the packet and responded with a RST packet.

Answer: A

Explanation:

The attempted bytes count in Prisma Cloud's context refers to the amount of traffic that is either denied by security group or firewall rules, or the traffic that was reset by a host or virtual machine (VM) that received the packet and responded with a RST (Reset) packet (A). This metric is crucial for understanding the nature of blocked or interrupted traffic within the cloud environment, helping administrators identify potential security threats or misconfigurations that may be preventing legitimate traffic. It encompasses both the traffic actively blocked by security controls and the traffic that the receiving entity deemed invalid or unwanted, thus providing a comprehensive view of the network's defensive posture.

NEW QUESTION # 94

Which two information types cannot be seen in the data security dashboard? (Choose two).

- A. Top Publicly Exposed Objects By Data Profile
- B. Total objects
- **C. Bucket owner**
- D. Object Data Profile by Region

- E. Object content

Answer: C,E

Explanation:

The data security dashboard in Prisma Cloud provides a comprehensive overview of the security posture related to cloud data storage. However, certain information types, such as the identity of the bucket owner and the actual content within an object, are not typically displayed on such dashboards. This is because the dashboard focuses more on aggregated data profiles, exposure levels, and compliance-related information rather than individual ownership details or the specific content of objects, which may require separate detailed analysis or are managed through different security mechanisms.

NEW QUESTION # 95

What is required for Prisma Cloud to successfully execute auto-remediation commands?

- A. Prisma Cloud requires no access to the cloud platform
- B. Read access to the cloud platform
- C. Write access to the cloud platform
- D. Access to the cloud platform only for Azure

Answer: C

Explanation:

For Prisma Cloud to execute auto-remediation commands, it requires write access to the cloud platform. This is because auto-remediation involves making changes to configurations or settings within the cloud environment to rectify security issues. Thus, the correct answer is B: Write access to the cloud platform.

NEW QUESTION # 96

Which statement about build and run policies is true?

- A. Run policies monitor network activities in the environment and check for potential issues during runtime.
- B. Build policies enable you to check for security misconfigurations in the IaC templates.
- C. The four main types of policies are: Audit Events, Build, Network, and Run.
- D. Every type of policy has auto-remediation enabled by default.

Answer: B

Explanation:

A true statement about build and run policies is A. Build policies enable you to check for security misconfigurations in the IaC templates. This capability is crucial for identifying potential security issues early in the development process, allowing for proactive mitigation before deployment, thereby enhancing the overall security posture of the applications and infrastructure being developed.

NEW QUESTION # 97

.....

We also provide you with customizable desktop Central Finance in Palo Alto Networks Cloud Security Professional (CloudSec-Pro) practice test software and web-based Palo Alto Networks CloudSec-Pro practice exam. You can adjust timings and Palo Alto Networks Cloud Security Professional (CloudSec-Pro) questions number of our CloudSec-Pro practice exams according to your training needs. These Palo Alto Networks CloudSec-Pro Practice Tests simulate the real CloudSec-Pro exam pattern, track your progress, and help you overcome mistakes. Our CloudSec-Pro desktop software is compatible with Windows.
