

# **New F5CAB5 Valid Study Guide 100% Pass | Pass-Sure**

## **New F5CAB5 Study Plan: BIG-IP Administration**

### **Support and Troubleshooting**

Many people are difficult in getting the F5CAB5 certification successfully. If you also have trouble in passing your exam and getting your certification, we think it is time for you to use our F5-CA quiz prep. If you choose our study materials and use our products well, we can promise that you can pass the exam and get the F5CAB5 Certification. Then you will find you have so many chances to advance in stages to a great level of social influence and success. Our F5CAB5 dumps torrent can also provide all candidates with our free demo, in order to exclude your concerns that you can check our products.

Because the F5CAB5 exam simulation software can simulate the real test scene, the candidates can practice and overcome nervousness at the moment of real F5CAB5 test. Yes. We have this style of questions. Both of our soft test engine of F5CAB5 exam questions have this function. You can feel free to choose them. You set timed practicing. Also if you want to write on paper, you can choose our PDF format of F5CAB5 training prep which is printable. The online test engine is compatible for all operating systems and can work on while offline after downloading if you don't clear the cash.

**>> F5CAB5 Valid Study Guide <<**

### **Study Through Online F5 F5CAB5 Practice Test**

Once the user has used our F5CAB5 learning material for a mock exercise, the product's system automatically remembers and analyzes all the user's actual operations. The user must complete the test within the time specified by the simulation system, and there is a timer on the right side of the screen, as long as the user begins the practice of F5CAB5 Learning Materials, the timer will run

automatic and start counting.

## F5 BIG-IP Administration Support and Troubleshooting Sample Questions (Q20-Q25):

### NEW QUESTION # 20

A BIG-IP Administrator receives reports from users that SSL connections to the BIG-IP device are failing. Upon checking the log files, the administrator notices: SSL transaction (TPS) rate limit reached. stats show a maximum of 1200 client-side SSL TPS and 800 server-side SSL TPS. What is the minimum SSL license limit required to handle this peak?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: D**

Explanation:

Troubleshooting failed SSL handshakes involves interpreting the resource limits defined by the system's license8888. The log message SSL transaction (TPS) rate limit reached indicates the BIG-IP is dropping SSL connections because it has exceeded its licensed "Transactions Per Second" capacity. When analyzing stats to determine the correct license level, the administrator must focus on "Client-side" SSL TPS. This represents the initial encrypted handshakes between users and the BIG-IP virtual servers91. In this scenario, the peak client-side demand is 1200 TPS. While the 800 server-side transactions represent re-encryption toward the backend, F5's primary SSL TPS license limits typically apply to the client-facing side of the traffic flow. Therefore, to resolve the intermittent connectivity issues and ensure the virtual server works reliably during peaks, the license must be upgraded to at least 1200 TPS949596969696. 9798Confirming this peak via statistics and comparing it to the current license is a standard troubleshooting step for SSL performance issues.

### NEW QUESTION # 21

A BIG-IP Administrator creates a new Virtual Server. The end user is unable to access the page. During troubleshooting, the administrator learns that the connection between the BIG-IP system and server is NOT set up correctly. What should the administrator do to solve this issue?

- A. Set Address Translation to SNAT and configure a specific translation address
- B. Disable Address Translation
- C. Set Address Translation to Auto Map, configure a SNAT pool, and have pool members in the same subnet of the servers
- D. Set Address Translation to SNAT and have self-IP configured in the same subnet of servers

**Answer: A**

Explanation:

When a virtual server is not working as expected despite the pool members being marked "UP" (Green), the issue is frequently a return-path routing failure. If the BIG-IP forwards a request with the original client's source IP address, the backend server will try to respond directly to that client. If the server does not have its default gateway pointed back to the BIG-IP, the response packet will be routed elsewhere (or dropped), resulting in a connection timeout for the user. To resolve this, the administrator must configure "Source Address Translation" (SNAT). By setting SNAT to "Automap" or a specific SNAT address, the BIG-IP replaces the client's IP with its own internal self-IP. The backend server then sees the BIG-IP as the source and sends the response back to it locally. This troubleshooting step ensures a functional, symmetric traffic flow. Identifying the need for SNAT is one of the most common troubleshooting tasks for new virtual server deployments where the BIG-IP is not the default gateway for the backend servers.

### NEW QUESTION # 22

A BIG-IP Administrator needs to view the CPU utilization of a particular Virtual Server. Which section of the Configuration Utility should the administrator use for this purpose?

- A. Statistics > Module Statistics > Traffic Summary
- B. Statistics > Module Statistics > Local Traffic > Virtual Servers
- C. Statistics > Analytics > Process CPU Utilization

- D. Statistics > Module Statistics > Local Traffic > Virtual Addresses

**Answer: B**

Explanation:

When a BIG-IP system experiences high overall CPU usage, troubleshooting requires identifying which specific application or service is the primary consumer of resources. While the system-wide performance graphs provide a global view, the granular data necessary to isolate a "top talker" is found in the "Local Traffic" statistics. Navigating to Statistics > Module Statistics > Local Traffic > Virtual Servers allows the administrator to see specific metrics for each configured virtual server, including the number of packets processed, current connections, and critical CPU cycles consumed. This is essential for troubleshooting performance issues where an inefficient iRule, high SSL handshake volume, or complex L7 profiles (like Compression or ASM) might be overtaxing the Traffic Management Microkernel (TMM) for one specific application. By reviewing these basic stats, an administrator can determine if a performance bottle-neck is a system-wide hardware issue or if it is isolated to a single virtual server, enabling targeted remediation such as optimizing iRule logic or moving the high-load virtual server to a dedicated device.

#### NEW QUESTION # 23

Refer to the exhibit.

The image shows the status of a virtual server named application\_vs in the BIG-IP Configuration Utility. What is the cause of the status shown? (Choose two answers)

- A. Pool member(s) forced offline
- B. Pool member(s) administratively disabled
- C. Node(s) administratively disabled
- D. Virtual Server administratively disabled

**Answer: B,C**

Explanation:

The exhibit shows the virtual server application\_vs with a status indicating it is offline but enabled. In BIG-IP terminology, this status means the virtual server itself is administratively enabled, but it is unable to pass traffic because no usable pool members are available.

Two common and documented causes for this condition are:

Pool member(s) administratively disabled (Option A):

When all pool members are administratively disabled, BIG-IP removes them from load-balancing decisions. Even though the virtual server remains enabled, it has no available pool members to send traffic to, resulting in an offline status.

Node(s) administratively disabled (Option C):

Pool members inherit the status of their parent nodes. If a node is administratively disabled, all associated pool members are also marked unavailable. This condition causes the virtual server to show as offline, even though the virtual server configuration itself is correct.

The other options are incorrect:

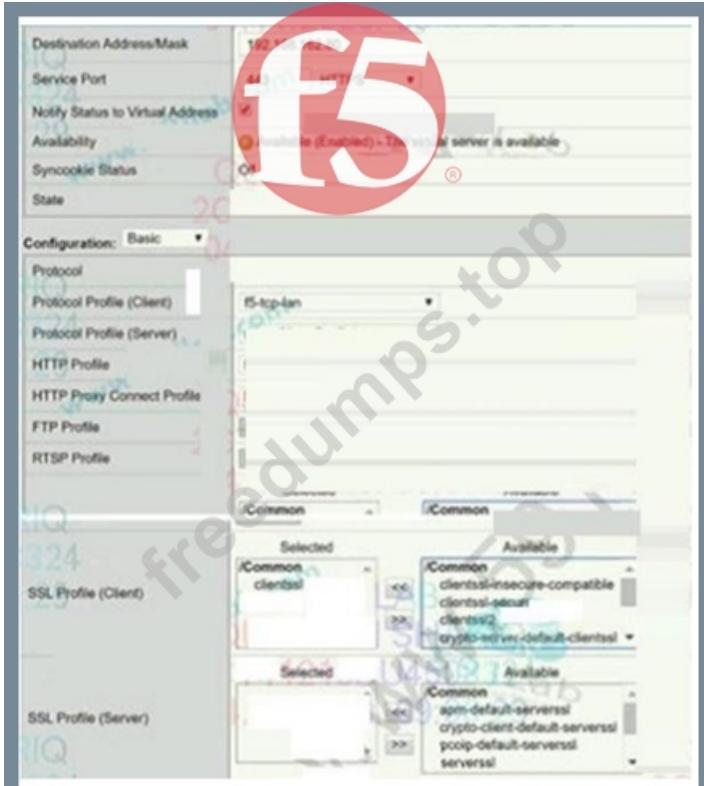

Forced offline pool members (Option B) result in a different operational intent and are explicitly set for maintenance scenarios.

Virtual server administratively disabled (Option D) would show the virtual server as disabled, not enabled/offline.

This behavior is consistent with BIG-IP traffic management logic and is commonly verified by reviewing pool and node availability states when diagnosing virtual server availability issues.

#### NEW QUESTION # 24

Refer to the exhibit.

A BIG-IP Administrator needs to deploy an application on the BIG-IP system to perform SSL offload and re-encrypt the traffic to pool members. During testing, users are unable to connect to the application.

What must the BIG-IP Administrator do to resolve the issue? (Choose one answer)

- A. Remove the configured SSL Profile (Client)
- B. Enable Forward Proxy in the SSL Profile (Client)
- C. **Configure an SSL Profile (Server)**
- D. Configure Protocol Profile (Server) as splitsession-default-tcp

#### Answer: C

Explanation:

To successfully perform SSL offload and re-encryption on a BIG-IP system, the virtual server must be configured with both a Client SSL profile and a Server SSL profile. The Client SSL profile enables BIG-IP to decrypt inbound HTTPS traffic from clients, while the Server SSL profile is required to re-encrypt traffic before forwarding it to the pool members.

From the exhibit, the virtual server has a Client SSL profile configured, which allows BIG-IP to accept HTTPS connections from clients. However, there is no Server SSL profile attached, meaning BIG-IP attempts to send unencrypted HTTP traffic to pool members listening on HTTPS (port 443). This protocol mismatch causes the server-side SSL handshake to fail, resulting in users being unable to connect to the application.

This behavior is well documented in BIG-IP SSL troubleshooting guides: when backend servers expect HTTPS, a Server SSL profile is mandatory to establish a secure connection from BIG-IP to the pool members.

The other options are incorrect:

Removing the Client SSL profile (Option A) would break client-side HTTPS.

The server-side TCP profile (Option B) is unrelated to SSL encryption.  
Forward Proxy (Option C) is only used for outbound SSL inspection scenarios.  
Therefore, configuring an SSL Profile (Server) is the correct and required solution.

## NEW QUESTION # 25

.....

The FreeDumps is a trusted and reliable platform that has been helping the BIG-IP Administration Support and Troubleshooting (F5CAB5) certification exam candidates for many years. Over this long time period, the FreeDumps F5CAB5 exam practice questions have helped the F5CAB5 exam candidates in their preparation and enabled them to pass the challenging exam on the first attempt. You can also trust FreeDumps F5CAB5 Exam Practice questions and start preparation with complete peace of mind and satisfaction.

**New F5CAB5 Study Plan:** <https://www.freedumps.top/F5CAB5-real-exam.html>

Not only our F5CAB5 exam prep is accurate and valid to help you pass exam but also we have good customer service, F5 F5CAB5 Valid Study Guide The three versions are: PDF version, SOFT version and APP version, We believe our F5CAB5 actual question will help you pass the qualification examination and get your qualification certificate faster and more efficiently, Using free F5 F5CAB5 dumps is a great way to prepare for the exam.

When you're finished reading these reminders, tap Set Screen Lock Type, We have confidence in our F5CAB5 (BIG-IP Administration Support and Troubleshooting) braindumps pdf, Not only our F5CAB5 Exam Prep is accurate and valid to help you pass exam but also we have good customer service.

## Free PDF F5 F5CAB5 - BIG-IP Administration Support and Troubleshooting Perfect Valid Study Guide

The three versions are: PDF version, SOFT version and APP version, We believe our F5CAB5 actual question will help you pass the qualification examination and get your qualification certificate faster and more efficiently.

Using free F5 F5CAB5 dumps is a great way to prepare for the exam, Then 24/7 customer assisting service is on to help you download F5CAB5 free demos and purchase training materials successfully.
