Salesforce Certified Marketing Cloud Engagement Developer Sample Questions (Q133-Q138):

NEW QUESTION # 133

A marketer from Cloud Kicks wants to make sure no email from their welcome journey gets sent to their competitor at Rainbow Run.

Which two best practices should the developer use when setting up the Send Email Activity in the welcome journey?

Choose 2 answers

- A. Create an Exclusion Script with the Rainbow Run domain for use In the activity
- B. Create a Suppression List with all possible email addresses from Rainbow Run
- C. Create a Filter Activity In the journey that removes the Rainbow Run domain
- D. Create a data extension with the Rainbow Run domain for use with a Domain Exclusion

Answer: A,B

Explanation:

To ensure that emails are not sent to a competitor, the best practices are:

* Suppression List: Create a Suppression List that includes all possible email addresses from Rainbow Run. This list will prevent these email addresses from receiving emails.

* Exclusion Script: Create an Exclusion Script that checks the domain of the email address and excludes addresses from Rainbow Run.

NEW QUESTION # 134

Northern Trail Outfitters (NTO) wants to determine the best identifier for subscribers across all channels.

What should be recommended

- A. Mobile ID
- B. Email Address
- C. Subscriber ID
- D. Contact Key

Answer: D

Explanation:

To determine the best identifier for subscribers across all channels, Contact Key (A) should be recommended.

The Contact Key is a unique identifier that can be used consistently across all channels, ensuring a unified view of the subscriber's interactions and data.

NEW QUESTION # 135

A developer wants to write a query to compile data originating from an HTML form so it can be exported in CSV format. However, the source data extension may contain line breaks within the Comments field, which makes it difficult to read and sort the resulting CSV.

Which SQL functions could be used to change each line break to a single space?

- A. REPLACE and CHAR
- B. FORMAT and SPACE
- C. LTRIM and RTRIM
- D. REPLICATE and NCHAR

Answer: A

Explanation:

To remove line breaks within the Comments field and replace them with a single space, you can use the REPLACE function in combination with the CHAR function. The CHAR(13) and CHAR(10) functions represent carriage return and line feed characters, respectively.

* REPLACE Function: This function is used to replace occurrences of a specified string with another string.

* CHAR Function: This function returns the character based on the ASCII code provided.

* Example:

```
SELECT REPLACE(REPLACE(Comments, CHAR(13), ' '), CHAR(10), ' ') AS Comments FROM YourDataExtension
```

Salesforce SQL Reference

NEW QUESTION # 136

A developer wants to configure an automation to import files placed on the SFTP shared by a customer's data vendor. The automation will start when a file matching a specific naming pattern is encountered in the Import folder. The first step of the automation is a File Import Activity referencing a substitution string for the matching file. Which substitution string represents the name of the file?

- A. %%FILENAME_FROM_IMPORT%%
- B. %%TRIGGER_FILENAME%%
- C. %%FILENAME_FROM_TRIGGER%%
- D. %%FILENAME%%

Answer: B

Explanation:

When configuring an automation to import files placed on the SFTP, and starting the automation based on a file matching a specific naming pattern, the substitution string that represents the name of the file is %%TRIGGER_FILENAME%%. This substitution string is used to reference the filename of the triggering file in the File Import Activity.

NEW QUESTION # 137

A company needs to retrieve a large number of rows from a DE via the API. Which two solutions would optimize the performance? Choose2

- A. Use a SimpleFilterPart to retrieve small sets of relevant data.
- B. Use the REST API instead of the SOAP API
- C. Use the ContinueRequest feature
- D. Use AMPscript API functions on a CloudPage

Answer: A,C

Explanation:

To optimize the performance when retrieving a large number of rows from a Data Extension via the API:

* Use a SimpleFilterPart to retrieve small sets of relevant data (A) - This approach helps in fetching only the necessary data by applying filters, thus reducing the amount of data transferred and processed.

* Use the ContinueRequest feature (C) - This feature in the SOAP API allows for pagination of results, making it possible to handle large sets of data in manageable chunks.
