"Generative AI creates new data or content, such as images, music, or text. It is commonly used in image editing, graphic design, and media production." - CompTIA ITF+ Guide Other AI types:

- A. Anti-malware
- B. Certificate
- **C. Firewall**
- D. Database

Answer: C

Explanation:

A firewall can block traffic between workstations if it's not properly configured. If a user cannot connect from one device to another on the network, it is likely that the firewall settings are preventing this communication.

"Firewalls control the incoming and outgoing network traffic based on predetermined security rules. If improperly configured, they may block legitimate access between devices." - CompTIA ITF+ Study Guide Other options:

B . Database - Not related to connectivity

C . Anti-malware - Protects from malicious software, not network configuration D . Certificate - Used for secure communication, but not basic connectivity Correct answer: A

*USB lock restricts port access but doesn't prevent theft.

NEW QUESTION # 102

Given the following table:

ID	Month	Day	Year	Name
1	October	6	1969	James
2	May	13	1970	Jane

Which of the following fields best represents a primary key?

- A. Name
- B. Year
- **C. ID**
- D. Month
- E. Day

Answer: C

Explanation:

A primary key is a unique identifier for each record in a database table. It must be unique and not null across all rows. In this table, the field ID is the only column that uniquely identifies each row and does not repeat.

"A primary key is a field (or a set of fields) that uniquely identifies a record in a table. It ensures that each record can be uniquely retrieved." - CompTIA ITF+ Official Study Guide Analysis of other options:

Month, Day, Year, and Name can have duplicate values across multiple records and therefore do not serve as unique identifiers.

Correct answer: A

The ID field contains unique values for each record and is typically used as a primary key in a database. A primary key uniquely identifies each row in a table.
