

Study Microsoft AZ-700 Dumps & Reliable AZ-700 Test Tips

P.S. Free & New AZ-700 dumps are available on Google Drive shared by PassReview: https://drive.google.com/open?id=16hX-4EZi1PwLpq56nFdZ_7cSVsrT9a3H

Our AZ-700 learning materials provide multiple functions and considerate services to help the learners have no inconveniences to use our product. We guarantee to the clients if only they buy our AZ-700 study materials and learn patiently for some time they will be sure to pass the AZ-700 test with few failure odds. The pass rate of our AZ-700 exam questions is high as 98% to 100%, which is unique in the market. And the data also proved and tested the high-quality of our AZ-700 practice guide.

Successful candidates who pass the AZ-700 exam will earn the Microsoft Certified: Azure Networking Solutions certification, which validates their ability to design and implement Azure networking solutions. Designing and Implementing Microsoft Azure Networking Solutions certification demonstrates proficiency in deploying and managing network infrastructures, designing and implementing virtual network solutions, securing network traffic, configuring DNS and Load Balancing, and optimizing network performance. Moreover, this certification provides IT professionals with a competitive edge in the job market, and they can apply for roles such as Azure Networking Engineers, Azure Solutions Architects, and Network administrators.

Microsoft AZ-700 is a popular certification exam that is designed for IT professionals who want to validate their skills in designing and implementing Microsoft Azure Networking Solutions. AZ-700 exam is ideal for anyone who wants to demonstrate their knowledge of Microsoft Azure Networking technologies and solutions. Passing AZ-700 exam demonstrates that you have the skills and knowledge required to design and implement secure, scalable, and highly available networking solutions in Microsoft Azure.

Reliable AZ-700 Test Tips | Vce AZ-700 Exam

Do you feel aimless and helpless when the AZ-700 exam is coming soon? If your answer is absolutely yes, then we would like to suggest you to try our AZ-700 training materials, which are high quality and efficiency test tools. Your success is 100% ensured to pass the AZ-700 Exam and acquire the dreaming certification which will enable you to reach for more opportunities to higher incomes or better enterprises.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q75-Q80):

NEW QUESTION # 75

You have an Azure subscription that contains a virtual network named VNet1. VNet1 contains the following subnets:

- AzureFirewallSubnet
- GatewaySubnet
- Subnet1
- Subnet2
- Subnet3

Subnet2 has a delegation to the Microsoft.Web/serverfarms service.

The subscription contains the resources shown in the following table.

You need to implement an Azure application gateway named AG1 that will be integrated with an Azure Web Application Firewall (WAF). AG1 will be used to publish VMSS1.

To which subnet should you connect AG1?

- A. GatewaySubnet
- **B. Subnet3**
- C. AzureFirewallSubnet
- D. Subnet1
- E. Subnet2

Answer: B

Explanation:

An application gateway is a dedicated deployment in your virtual network. Within your virtual network, a dedicated subnet is required for the application gateway. You can have multiple instances of a given application gateway deployment in a subnet. You can also deploy other application gateways in the subnet. But you can't deploy any other resource in the application gateway subnet.

NEW QUESTION # 76

You have an Azure virtual network named Vnet1 that connects to an on-premises network.

You have an Azure Storage account named storageaccount1 that contains blob storage.

You need to configure a private endpoint for the blob storage. The solution must meet the following requirements:

Ensure that all on-premises users can access storageaccount1 through the private endpoint.

Prevent access to storageaccount1 from being interrupted.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

- 1 - Configure a private endpoint on storageaccount1 and disable public access to the account
- 2 - Deploy a virtual machine to a subnet in Vnet1
- 3 - Install the DNS server role and configure the forwarding of blob.core.windows.net to 168.63.129.16
- 4 - Configure on-premises DNS servers to forward biob.core.windows.net to the virtual machine

Reference:

<https://docs.microsoft.com/en-us/azure/storage/common/storage-private-endpoints>

NEW QUESTION # 77

You need to configure the default route in Vnet2 and Vnet3. The solution must meet the virtual networking requirements. What should you use to configure the default route?

- A. route filters
- B. a user-defined route assigned to GatewaySubnet in Vnet2 and Vnet3
- C. a user-defined route assigned to GatewaySubnet in Vnet1
- **D. BGP route exchange**

Answer: D

Explanation:

VNet 1 will get the default from BGP and propagate it to VNET 2 and 3

Topic 3, Proseware. Inc

Overview

Existing Environment

Proseware. Inc. is a financial services company that has a main office in New York City and a branch office in San Francisco.

Hybrid Environment

Proseware has an on-premises Active Directory Domain Services (AD DS) forest named corp.proseware.com that syncs with a Microsoft Entra tenant named proseware.com.

Proseware has an Azure subscription that is linked to proseware.com.

Proseware has an internal certification authority (CA).

Network infrastructure

The offices contain the resources shown in the following table.

NYCNet connects to Azure by using an ExpressRoute circuit.

SFONet connects to Azure by using a Site-to-Site (S2S) VPN.

The Azure subscription contains the virtual networks and subnets shown in the following table.

□ The subscription contains four virtual machines named VM1, VM2, VM3, and VM4. VM1 and VM2 host an app named App1. VM3 and VM4 host a web app named App2 that is accessed by using a FQDN of app2.proseware.com. Users access app2.proseware.com by using HTTP or HTTPS.

VM1, VM2, and VM4 are connected to SpokeVNet

The subscription contains Application Gateway resources shown in the following table.

□ The subscription contains an Azure Front Door Standard profile named FD1. FD1 contains a single origin group that targets APPGW1 by using the default endpoint name.

HubVNet connects to NYCNet by using an ExpressRoute gateway named ERGW1.

The subscription contains an Azure Private DNS zone named DNSZone1 in the East US region. DNSZone1 hosts a namespace of azure.proseware.com and is linked to HubVNet. The subscription contains a Standard Azure load balancer named LBS1 in the East US region. LBS1 contains a backend pool that hosts VM1 and VM2.

Planned Changes

Proseware plans to implement the following changes:

* Deploy an Azure Private DNS Resolver named PRDNS1 to HubVNet and link PRDNS1 to SpokeVNet.

* Create a DNS forwarding ruleset named DNSRS1 and associate DNSRS1 with PRDNS1

* Deploy Azure Virtual Network Manager and implement the following rules:

o Allow inbound connections on TCP port 3389 from the on-premises networks to SU8NET-JUMPHOSTS. o Block inbound connections on TCP port 80 from the internet to SpokeVNet.

* Ensure that Azure Virtual Network Manager rules take precedence over conflicting NSG rules.

* Deploy two network virtual appliances (NVAs) named NVA1 and NVA2 to HubVNet.

* Deploy a gateway load balancer named LBGW1 to HubVNet.

* Configure LBGW1 to inspect traffic on TCP ports 443, 1433, and 1434 from LBS1 by using NVA1 and NVA2.

* Ensure that all the traffic to App2 is processed by using FD1.

Connectivity Requirements

Proseware identifies the following connectivity requirements:

* Minimize the complexity of the Azure Virtual Network Manager deployment.

* Route traffic between NYCNet and SFONet via the ExpressRoute circuit and the S2S VPN

* Ensure that remote users on Windows 11 devices can connect to HubVNet by using a Point-to-Site (P2S) VPN and their proseware.com credentials.

Security Requirements

Proseware identifies the following general requirements:

* Minimize the IP address space required to deploy platform-managed resources to the virtual networks.

* From SpokeVNet, resolve name resolution requests for the azure.proseware.com namespace and the corp.proseware.com namespace by using PRDNS1.

* Whenever possible, minimize administrative effort.

NEW QUESTION # 78

You have an Azure subscription that contains the route tables and routes shown in the following table.

The subscription contains the subnets shown in the following table.

The subscription contains the virtual machines shown in the following table.

There is a Site-to-Site VPN connection to each local network gateway.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

A screenshot of a computer Description automatically generated with medium confidence

NEW QUESTION # 79

You have the network topology shown in the Topology exhibit. (Click the Topology tab.)

You have the Azure firewall shown in the Firewall1 exhibit. (Click the Firewall tab.)

You have the route table shown in the RouteTable1 exhibit. (Click the RouteTable1 tab.)

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 80
