Exam 400-007 Outline - 400-007 Training Online

IT certification exam cost is really large cost for most candidates in the whole world. Passing exam at first attempt will be everyone's goal. Now our Cisco 400-007 valid exam cram review can help you achieve your goal. Recent years we are engaging in providing 100% pass-rate 400-007 Valid Exam Cram review for buyers from all over the world, and help thousands of candidates go through exam every year. If you have doubt in your test, let us help you pass exam for sure.

Cisco 400-007 Exam is a comprehensive test that covers a wide range of topics related to network design. Candidates are expected to have a deep understanding of network protocols, routing and switching technologies, security, network management, and network optimization. In addition, candidates should have experience in designing networks for large organizations and should be able to demonstrate their ability to create effective and efficient network architectures.

Cisco Certified Design Expert (CCDE) Written Exam Sample Questions (Q168-Q173):

NEW QUESTION # 168

When designing a WAN that will be carrying real-time traffic, what are two important reasons to consider serialization delay? (Choose two)

- A. Serialization delays are invariable because they depend only on the line rate of the interface
- **B. Serialization delay depends not only on the line rate of the interface but also on the size of the packet**
- C. Serialization delay is the time required to transmit the packet on the physical media.
- **D. Serialization delays are variable because they depend on the line rate of the interface and on the type of the packet being serialized.**
- E. Serialization delays are variable because they depend only on the size of the packet being serialized

Answer: B,D

NEW QUESTION # 169

A customer has a functional requirement that states HR systems within a data center should be segmented from other systems that reside in the same data center and same VLAN. The systems run legacy applications by using hard-coded IP addresses with all HR systems dedicated to .129 to .254 of the 10.20.20.0/24 prefix. Which segmentation method is optimal for the customer?

- A. routed firewalls
- **B. VACLs on data center switches**
- C. ACLs on data center switches
- D. data center perimeter firewalling

Answer: B

NEW QUESTION # 170

Drag and Drop Question

The CIA triad is foundational to information security, and one can be certain that one or more of the principles within the CIA triad has been violated when data is leaked or a system is attacked.

Drag and drop the countermeasures on the left to the appropriate principle section on the right in any order.

Answer:

Explanation:

NEW QUESTION # 171

Refer to the exhibit. As part of a redesign project, you must predict multicast behavior.

What happens to the multicast traffic received on the shared tree (*,G), if it is received on the LHR interface indicated*?

- A. It is dropped due to an unsuccessful RPF check against the multicast source
- B. It is switched give that no RPF check is performed
- **C. It is switched due to a successful RPF check against the routing table**
- D. It is dropped due to an unsuccessful RPF check against the multicast receiver.

Answer: C

NEW QUESTION # 172

Your network operations team is deploying Access Control Lists (ACLs) across your Internet gateways.

They wish to place an ACL inbound on the Internet gateway interface facing the core network (the "trusted" interface).

Which IP address would the ACL need for traffic sourced from the inside interface, to match the source address of the traffic?

- A. outside local
- B. outside global
- **C. inside local**
- D. inside global

Answer: C

NEW QUESTION # 173
