

2026 Training CloudSec-Pro Pdf | Trustable 100% Free Latest CloudSec-Pro Test Sample

2026 Latest TestkingPass CloudSec-Pro PDF Dumps and CloudSec-Pro Exam Engine Free Share: <https://drive.google.com/open?id=1THq261TE-VIc3CGp9kunf8V3ERQqmXRi>

We believe that getting the newest information about the exam will help all customers pass the CloudSec-Pro exam easily. If you purchase our study materials, you will have the opportunity to get the newest information about the CloudSec-Pro exam. More importantly, the updating system of our company is free for all customers. If you decide to buy and use the CloudSec-Pro Training Materials from our company, it will be very easy for you to pass the exam without doubt. We sincerely hope that you can achieve your dream in the near future by the CloudSec-Pro latest questions of our company.

If you want to pass the exam smoothly buying our Palo Alto Networks Cloud Security Professional guide dump is your ideal choice. They can help you learn efficiently, save your time and energy and let you master the useful information. Our passing rate of CloudSec-Pro study tool is very high and you needn't worry that you have spent money and energy on them but you gain nothing. We provide the great service after you purchase our CloudSec-Pro cram training materials and you can contact our customer service at any time during one day. It is a pity if you don't buy our CloudSec-Pro study tool to prepare for the test Palo Alto Networks certification.

Latest CloudSec-Pro Test Sample, Reliable CloudSec-Pro Test Duration

The Palo Alto Networks CloudSec-Pro certification exam is a valuable asset for beginners and seasonal professionals. If you want to improve your career prospects then CloudSec-Pro certification is a step in the right direction. Whether you're just starting your career or looking to advance your career, the Palo Alto Networks CloudSec-Pro Certification Exam is the right choice.

Palo Alto Networks CloudSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Security Operations Center (SOC) Fundamentals: This domain covers the foundational components of a SOC, including team roles, tools, and technologies used in day-to-day security operations. It also addresses how AI• ML and threat intelligence support incident response, categorization, and prioritization.
Topic 2	<ul style="list-style-type: none">• Application Security: This domain covers security practices integrated throughout the software development lifecycle, including application security posture management, CI• CD pipeline security, software composition analysis, IaC security, and secrets scanning. It also explores real-world application security use cases and scan management.

Topic 3	<ul style="list-style-type: none"> • Cloud Runtime Security: This domain addresses the protection of cloud workloads during active operation, covering cloud workload protection, detection and response, web application and API security, and vulnerability management. It also includes the processes involved in deploying and managing security agents.
Topic 4	<ul style="list-style-type: none"> • Cloud Posture Security: This domain examines the tools and practices used to assess and manage cloud security posture, spanning CSPM, KSPM, AI-SPM, and DSPM. It also covers agentless scanning, identity security, vulnerability management, unified compliance, and the role of Posture Security Management Modules.
Topic 5	<ul style="list-style-type: none"> • Cortex Fundamentals: This domain focuses on the core features of the Cortex Cloud platform, including indicator types, log management, asset inventory, compliance, and data protection. It also covers how to create reports and dashboards and how data sources are ingested into the platform.

Palo Alto Networks Cloud Security Professional Sample Questions (Q173-Q178):

NEW QUESTION # 173

Which IAM Azure RQL query would correctly generate an output to view users who have sufficient permissions to create security groups within Azure AD and create applications?

- A. `config from cloud.resource where api.name = 'azure-active-directory-authorization-policy' AND json.rule = defaultUserRolePermissions.allowedToCreateSecurityGroups is true and defaultUserRolePermissions.allowedToCreateApps is true`
- B. `config from cloud.resource where api.name = 'azure-active-directory-authorization-policy' AND json.rule = defaultUserRolePermissions exists`
- C. `config where api.name = 'azure-active-directory-authorization-policy' AND json.rule = defaultUserRolePermissions.allowedToCreateSecurityGroups is true and defaultUserRolePermissions.allowedToCreateApps is true`
- D. `config from network where api.name = 'azure-active-directory-authorization-policy' AND json.rule = defaultUserRolePermissions.allowedToCreateSecurityGroups is false and defaultUserRolePermissions.allowedToCreateApps is true`

Answer: A

Explanation:

The correct RQL query to view users who have sufficient permissions to create security groups within Azure AD and create applications is option D. This query is specifically designed to assess policies within Azure Active Directory (Azure AD) by checking the authorization policy settings related to user default role permissions. The query targets the `azure-active-directory-authorization-policy` API to fetch configurations (`config from cloud.resource`) and then filters those configurations based on the JSON rules that dictate whether users are allowed to create security groups (`defaultUserRolePermissions.allowedToCreateSecurityGroups is true`) and applications (`defaultUserRolePermissions.allowedToCreateApps is true`). This query provides a comprehensive check by ensuring both conditions are met, which is necessary for users to have the combined capabilities of creating security groups and applications within Azure AD.

In the context of Prisma Cloud and cloud security principles, the RQL (Resource Query Language) is utilized for querying the configuration state of resources within cloud environments to ensure compliance with security policies. The RQL syntax in option D precisely aligns with the requirements for identifying users with specific permissions, leveraging Prisma Cloud's capability to provide visibility and control over cloud resources, as emphasized in various resources like the "Prisma Cloud Visibility and Control Qualification Guide" and the "Guide to Cloud Security Posture Management Tools." These documents highlight the importance of continuous monitoring and validation of cloud resource configurations to maintain a secure and compliant cloud environment, which is effectively achieved through targeted RQL queries like the one in option D.

References:

"Prisma Cloud Visibility and Control Qualification Guide" discusses the importance of visibility and compliance in cloud environments, which is directly applicable to the use of RQL for querying resource configurations.

"Guide to Cloud Security Posture Management Tools" emphasizes the need for comprehensive visibility and governance across cloud environments, further supporting the rationale behind the specific RQL query used to assess user permissions in Azure AD.

NEW QUESTION # 174

An administrator sees that a runtime audit has been generated for a container.

The audit message is:

"/bin/ls launched and is explicitly blocked in the runtime rule. Full command: ls -latr" Which protection in the runtime rule would cause this audit?

- A. File systems
- B. Networking
- C. Processes
- D. Container

Answer: C

Explanation:

The protection in the runtime rule that would cause the audit message indicating "/bin/ls launched and is explicitly blocked in the runtime rule" is related to "Processes". In container security, a runtime rule set to monitor and restrict processes can block specific executables or commands from running within a container. If the rule is triggered, it indicates that a process that is explicitly denied by the policy attempted to execute, which in this case is the 'ls' command.

https://docs.paloaltonetworks.com/prisma/prisma-cloud/22-12/prisma-cloud-compute-edition-admin/runtime_defense/runtime_audits

NEW QUESTION # 175

Which command should be used in the Prisma Cloud twistcli tool to scan the nginx:latest image for vulnerabilities and compliance issues?

- A)
- B)
- C)
- D)

- A. Option D
- B. Option B
- C. Option C
- D. Option A

Answer: A

Explanation:

The correct command to scan the nginx:latest image for vulnerabilities and compliance issues using the Prisma Cloud twistcli tool is shown in Option D. This command uses twistcli images scan with specified parameters for the console address, username, and password, and it outputs the results to a file named scan- results.json. This allows for the scanning results to be saved and reviewed in a structured format, which aids in further analysis and tracking of vulnerabilities and compliance issues.

NEW QUESTION # 176

You have onboarded a public cloud account into Prisma Cloud Enterprise. Configuration Resource ingestion is visible in the Asset Inventory for the onboarded account, but no alerts are being generated for the configuration assets in the account.

Config policies are enabled in the Prisma Cloud Enterprise tenant, with those policies associated to existing alert rules. ROL statements on the investigate matching those policies return config resource results successfully.

Why are no alerts being generated?

- A. The public cloud account is not associated with an alert rule.
- B. The public cloud account is not associated with an alert notification.
- C. The public cloud account does not access to configuration resources.
- D. The public cloud account does not have audit trail ingestion enabled.

Answer: A

Explanation:

In Prisma Cloud Enterprise, for alerts to be generated for configuration assets in an onboarded public cloud account, it is essential that the account is associated with an alert rule that matches the enabled config policies.

If the account is not linked to an alert rule or if the existing alert rules do not match the config policies, no alerts will be generated even though configuration resource ingestion is visible, and RQL statements return config resource results. This requirement emphasizes the need for a well-structured alerting mechanism to ensure that security incidents are promptly identified and addressed.

NEW QUESTION # 177

In which two ways can Prisma Cloud images be retrieved in Prisma Cloud Compute Self-Hosted Edition?
(Choose two.)

- A. Retrieve Prisma Cloud images using URL auth by embedding an access token.
- B. Download Prisma Cloud images from [github.paloaltonetworks.com](https://github.com/paloaltonetworks).
- C. Pull the images from the Prisma Cloud registry without any authentication.
- D. Authenticate with Prisma Cloud registry, and then pull the images from the Prisma Cloud registry.

Answer: A,D

Explanation:

In Prisma Cloud Compute Self-Hosted Edition, images can be retrieved by first authenticating with the Prisma Cloud registry and then pulling the images from the Prisma Cloud registry. This process ensures secure access to Prisma Cloud images, as authentication is required to access the registry. By using authentication, Prisma Cloud ensures that only authorized users can retrieve and deploy Prisma Cloud images, maintaining the security and integrity of the deployment.

NEW QUESTION # 178

.....

Learning at electronic devices does go against touching the actual study. Although our CloudSec-Pro exam dumps have been known as one of the world's leading providers of exam materials, you may be still suspicious of the content. Therefore, we especially provide several demos for future reference and we promise not to charge you of any fee for those downloading. Then you will know whether it is suitable for you to use our CloudSec-Pro Test Questions. There are answers and questions provided to give an explicit explanation. We are sure to be at your service if you have any downloading problems!
