

Valid 1z0-071 Valid Real Test for Real Exam

2026 Latest SurePassExams 1z0-071 PDF Dumps and 1z0-071 Exam Engine Free Share: https://drive.google.com/open?id=1kJF1Z7_M2XKdg2w0BR9jz1StjYlfxVGM

Never have we made our customers disappointed about our 1z0-071 study guide. So we have enjoyed good reputation in the market for about ten years. In the future, we will stay integrity and research more useful 1z0-071 learning materials for our customers. Please continue supporting our 1z0-071 Exam Questions and we will make a better job with your warm encouragements and suggestions. So if you have any opinions about our 1z0-071 learning quiz, just leave them for us.

Candidate of 1z0-071 Certification Exam may have the following strengths

If the candidate is employable in the IT sector, then they have a good chance of qualifying for this exam. The candidate can access a variety of study materials to help them gain an understanding of the topics they need to learn. **Oracle 1z0-071 Dumps** are also available. You can also get help from these exam dumps in the form of practice exams. The exam material that is provided by Oracle (a test engine site) provides a wide range of topics that will be covered on the exam. Candidates do not need any prerequisites for this certification; it is open to almost anyone who would like to take it. The candidate has spent time studying various technologies and trends that are essentials in their industry, which can also help them prepare for this exam.

100% Pass 2026 1z0-071: Oracle Database SQL –Professional Valid Real Test

We believe that the greatest value of 1z0-071 study materials lies in whether it can help candidates pass the examination, other problems are secondary. And at this point, our 1z0-071 study materials do very well. We can proudly tell you that the passing rate of our 1z0-071 Study Materials is close to 100 %. That is to say, almost all the students who choose our products can finally pass the exam. We are not exaggerating because this conclusion comes from previous statistics.

Oracle Database SQL Sample Questions (Q100-Q105):

NEW QUESTION # 100

Which two statements are true about a full outer join?

- A. It includes rows that are returned by a Cartesian product.
- B. It returns only unmatched rows from both tables being joined.
- C. The Oracle join operator (+) must be used on both sides of the join condition in the WHERE clause.
- D. It returns matched and unmatched rows from both tables being joined.
- E. It includes rows that are returned by an inner join.

Answer: D,E

NEW QUESTION # 101

Which three are true about multiple INSERT statements?

- A. They can insert each computed row into more than one table.
- B. They can be performed on external tables using SQL*Loader.
- C. They can be performed on relational tables.
- D. They can be performed on views.
- E. They can be performed on remote tables.
- F. They can be performed only by using a subquery.

Answer: C,D,E

Explanation:

Multiple INSERT statements allow data insertion into one or more tables based on different conditions or datasets:

* Option A: False. Multiple INSERT operations can be performed using direct values, subqueries, or even default values, not exclusively through subqueries.

* Option B: True. They can indeed be performed on relational tables, which is the standard use case in most relational databases.

* Option C: True. INSERT operations can be performed on updatable views, assuming the view is not complex (involving joins, GROUP BY clauses, etc.).

* Option D: True. Oracle allows INSERT operations on remote tables via database links, enabling distributed database interactions.

* Option E: False. Direct INSERT statements cannot be performed on external tables. External tables are typically used for read operations, with data loading handled through utilities like SQL*Loader or external data processing tools.

* Option F: False. Each INSERT statement inserts data into one table. While a single SQL command block can contain multiple INSERT statements, each one is directed at a single table.

NEW QUESTION # 102

Which two statements are true about the results of using the INTERSECT operator in compound queries?

- A. Reversing the order of the intersected tables can sometimes affect the output.
- B. INTERSECT ignores NULLs
- C. INTERSECT returns rows common to both sides of the compound query.
- D. Column names in each SELECT in the compound query can be different.
- E. The number of columns in each SELECT in the compound query can be different.

Answer: C,D

Explanation:

In Oracle Database 12c, the INTERSECT operator is used in compound queries to return only the rows that are common to both SELECT statements involved in the query. Here's a breakdown of why the correct answer is C:

* A: Incorrect. The order of the tables in an INTERSECT operation does not affect the output because INTERSECT returns only the common elements between the two queries. The operation is symmetric.

* B: Incorrect. While the column names themselves can differ between the two SELECT statements, the data types and the number of columns must match for INTERSECT to function correctly.

* C: Correct. INTERSECT returns the intersection of the results of the two queries, which includes only rows that are found in both result sets.

* D: Incorrect. The number of columns and their data types in each SELECT statement of the INTERSECT must be the same to avoid errors and to correctly perform the comparison.

* E: Incorrect. INTERSECT does not ignore NULLs; rows with NULL values in corresponding columns must exactly match (both sides having NULLs in the same column) to be included in the output.

NEW QUESTION # 103

View the Exhibit and examine the structure of the CUSTOMERS table.

Using the CUSTOMERS table, you must generate a report that displays a credit limit increase of 15% for all customers.

Customers with no credit limit should have "Not Available" displayed.

Which SQL statement would produce the required result?

- A. `SELECT TO_CHAR(NVL(cust_credit_limit*.15, 'Not Available')) "NEW CREDIT" FROM customers`
- B. `SELECT NVL (cust_credit_limit*.15, 'Not Available') "NEW CREDIT" FROM customers`
- C. `SELECT NVL (TO_CHAR(cust_credit_limit*.15), 'Not Available') "NEW CREDIT" FROM customers`
- D. `SELECT NVL (cust_credit_limit, 'Not Available')*.15 "NEW CREDIT" FROM customers`

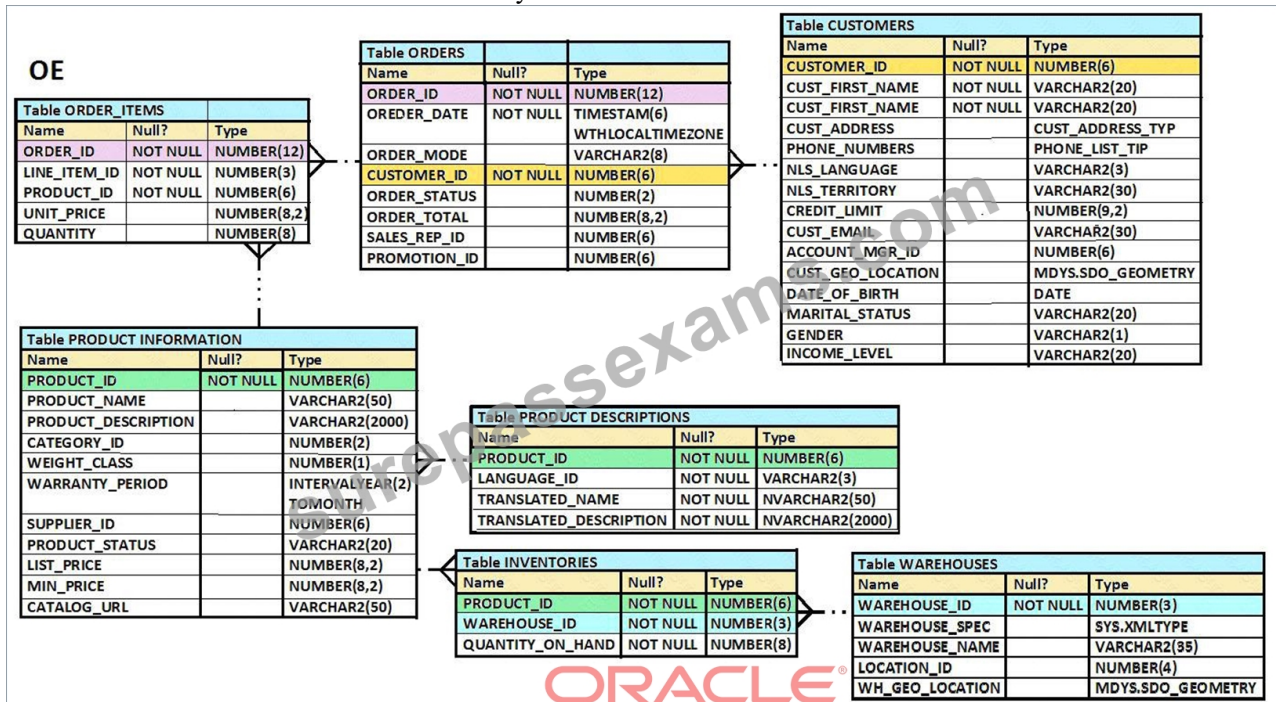

Answer: B

NEW QUESTION # 104

View the Exhibit and examine the structure of ORDERS and ORDER_ITEMS tables.

ORDER_ID is the primary key in the ORDERS table and the foreign key of the ORDER_ITEMS table, whose constraint is defined with the ON DELETE CASCADE option.

Which DELETE statement would execute successfully?

- A. DELETE orders o, order_items i WHERE o.order_id = i.order_id;
- B. DELETE order_id FROM orders WHERE order_total < 1000;
- C. DELETE orders WHERE order_total < 1000;
- D. DELETE FROM orders WHERE (SELECT order_id FROM order_items);

Answer: C

NEW QUESTION # 105

.....

SurePassExams is the website that provides all candidates with IT certification exam dumps and can help all candidates pass their exam with ease. SurePassExams IT expert edits all-time exam materials together on the basis of flexibly using the experiences of forefathers, thereby writing the best Oracle 1z0-071 Certification Training dumps. The exam dumps include all questions that can appear in the real exam. So it can guarantee you must pass your exam at the first time.
