

Palo Alto Networks New CloudSec-Pro Test Duration | Free Download CloudSec-Pro Reliable Test Braindumps: Palo Alto Networks Cloud Security Professional

P.S. Free & New CloudSec-Pro dumps are available on Google Drive shared by Real4test: https://drive.google.com/open?id=1e6D8Pyg0saVkOmlZyMVu_inVp_4k9vz3

With the rapid development of society, people pay more and more attention to knowledge and skills. So every year a large number of people take CloudSec-Pro tests to prove their abilities. But even the best people fail sometimes. In addition to the lack of effort, may also not make the right choice. A good choice can make one work twice the result with half the effort, and our CloudSec-Pro Study Materials will be your right choice.

Palo Alto Networks CloudSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Cortex Fundamentals: This domain focuses on the core features of the Cortex Cloud platform, including indicator types, log management, asset inventory, compliance, and data protection. It also covers how to create reports and dashboards and how data sources are ingested into the platform.
Topic 2	<ul style="list-style-type: none">• Cloud Posture Security: This domain examines the tools and practices used to assess and manage cloud security posture, spanning CSPM, KSPM, AI-SPM, and DSPM. It also covers agentless scanning, identity security, vulnerability management, unified compliance, and the role of Posture Security Management Modules.
Topic 3	<ul style="list-style-type: none">• Security Operations Center (SOC) Fundamentals: This domain covers the foundational components of a SOC, including team roles, tools, and technologies used in day-to-day security operations. It also addresses how AI• ML and threat intelligence support incident response, categorization, and prioritization.
Topic 4	<ul style="list-style-type: none">• Cloud Runtime Security: This domain addresses the protection of cloud workloads during active operation, covering cloud workload protection, detection and response, web application and API security, and vulnerability management. It also includes the processes involved in deploying and managing security agents.
Topic 5	<ul style="list-style-type: none">• Application Security: This domain covers security practices integrated throughout the software development lifecycle, including application security posture management, CI• CD pipeline security, software composition analysis, IaC security, and secrets scanning. It also explores real-world application security use cases and scan management.

Free PDF Quiz CloudSec-Pro - Updated New Palo Alto Networks Cloud Security Professional Test Duration

Some people want to study on the computer, but some people prefer to study by their mobile phone. Whether you are which kind of people, we can meet your requirements. Because our CloudSec-Pro study torrent can support almost any electronic device, including iPod, mobile phone, and computer and so on. If you choose to buy our Palo Alto Networks Cloud Security Professional guide torrent, you will have the opportunity to use our study materials by any electronic equipment when you are at home or other places. We believe that our CloudSec-Pro Test Torrent can help you improve yourself and make progress beyond your imagination. If you buy our CloudSec-Pro study torrent, we can make sure that our study materials will not be let you down.

Palo Alto Networks Cloud Security Professional Sample Questions (Q85-Q90):

NEW QUESTION # 85

A user from an organization is unable to log in to Prisma Cloud Console after having logged in the previous day. Which area on the Console will provide input on this issue?

- A. SSO
- **B. Audit Logs**
- C. Users & Groups
- D. Access Control

Answer: B

Explanation:

In the event a user is unable to log in to the Prisma Cloud Console, Audit Logs serve as a critical area for investigating the issue. Audit Logs provide a detailed record of activities, including login attempts, within the Prisma Cloud environment. By examining the Audit Logs, administrators can identify failed login attempts, understand the reasons behind login failures (e.g., incorrect credentials, account lockouts, or access policy changes), and take appropriate actions to resolve the login issues, ensuring users can access the console as expected.

NEW QUESTION # 86

Console is running in a Kubernetes cluster, and Defenders need to be deployed on nodes within this cluster. How should the Defenders in Kubernetes be deployed using the default Console service name?

- A. From the deployment page in Console, choose "twistlock-console" for Console identifier and run the "curl | bash" script on the master Kubernetes node.
- B. From the deployment page, configure the cloud credential in Console and allow cloud discovery to auto-protect the Kubernetes nodes.
- **C. From the deployment page in Console, choose "twistlock-console" for Console identifier, generate DaemonSet file, and apply DaemonSet to the twistlock namespace.**
- D. From the deployment page in Console, choose "pod name" for Console identifier, generate DaemonSet file, and apply the DaemonSet to twistlock namespace.

Answer: C

Explanation:

In Kubernetes environments, deploying Defenders to protect nodes involves leveraging DaemonSets, which ensure that every node in the cluster runs a copy of a specific pod. When the Console is running within a Kubernetes cluster, it's essential to correctly reference the Console service to ensure seamless communication between Defenders and the Console. Option A is the most straightforward and Kubernetes-native method for deploying Defenders. By choosing "twistlock-console" as the Console identifier on the deployment page within the Console, users can generate a DaemonSet configuration file tailored for the Twistlock namespace.

This approach ensures that the Defenders are correctly configured to communicate with the Console, providing comprehensive security coverage across the Kubernetes nodes. This method aligns with best practices for deploying security agents in Kubernetes and is supported by Prisma Cloud (formerly Twistlock) documentation, which provides step-by-step instructions for deploying

Defenders using DaemonSets.

NEW QUESTION # 87

How does assigning an account group to an administrative user on Prisma Cloud help restrict access to resources?

- A. It does not restrict access to any resources within the cloud account.
- **B. It restricts access only to the resources and data that pertains to the cloud account(s) within an account group.**
- C. It restricts access only to certain types of resources within the cloud account.
- D. It restricts access to all resources and data within the cloud account.

Answer: B

Explanation:

In Prisma Cloud, assigning an administrative user to an account group is a way to implement the principle of least privilege by restricting the user's access to a specific subset of resources and data. Account groups are logical collections of cloud accounts, and by associating an administrative user with a particular account group, their access is limited to only those resources and data associated with the cloud accounts within that group. This mechanism ensures that users have access only to the information and resources necessary for their role or tasks, enhancing security by minimizing the potential for unauthorized access or actions within the cloud environment.

NEW QUESTION # 88

The Prisma Cloud administrator has configured a new policy.

Which steps should be used to assign this policy to a compliance standard?

- A. Create the Compliance Standard from Compliance tab, and then select Add to Policy.
- B. Custom policies cannot be added to existing standards.
- **C. Edit the policy, go to step 3 (Compliance Standards), click + at the bottom, select the compliance standard, fill in the other boxes, and then click Confirm.**
- D. Open the Compliance Standards section of the policy, and then save.

Answer: C

Explanation:

To assign a new policy to a compliance standard in Prisma Cloud, the administrator needs to edit the policy and navigate to the step where compliance standards are managed. By clicking the '+' button, the administrator can add the policy to a specific compliance standard, provide necessary details, and confirm the assignment. This integrates the custom policy into the chosen compliance standard, ensuring that compliance checks include the newly defined policy criteria.

NEW QUESTION # 89

You are tasked with configuring a Prisma Cloud build policy for Terraform. What type of query is necessary to complete this policy?

- A. CloudFormation
- B. Terraform
- **C. JSON**
- D. YAML

Answer: C

Explanation:

"you can also create configuration policies to scan your Infrastructure as Code (IaC) templates that are used to deploy cloud resources. The policies used for scanning IaC templates use a JSON query instead of RQL."

<https://docs.paloaltonetworks.com/prisma/prisma-cloud/prisma-cloud-admin/prisma-cloud-policies/create-a-policy>

NEW QUESTION # 90

.....

For the purposes of covering all the current events into our CloudSec-Pro study guide, our company will continuously update our training materials. And after payment, you will automatically become the VIP of our company, therefore you will get the privilege to enjoy free renewal of our CloudSec-Pro practice test during the whole year. No matter when we have compiled a new version of our CloudSec-Pro Training Materials our operation system will automatically send the latest version of the CloudSec-Pro preparation materials for the exam to your email, all you need to do is just check your email then download it.
