NEW QUESTION # 60

An administrator has a requirement to add user authentication to the ZTNA access for remote or off-fabric users. Which FortiGate feature is required in addition to ZTNA?

- A. FortiGate certificates
- B. FortiGate endpoint control
- C. FortiGate FSSO
- **D. C. FortiGate explicit proxy**

Answer: D

Explanation:

For adding user authentication to the ZTNA access for remote or off-fabric users, the following FortiGate feature is required in addition to ZTNA:

* FortiGate explicit proxy allows FortiGate to intercept web traffic for authentication purposes.

* ZTNA integrates with various FortiGate features to provide secure access and ensure that users are authenticated before accessing resources.

* By using an explicit proxy, FortiGate can handle web traffic and enforce authentication policies for remote users who are not directly on the corporate network (off-fabric).

Thus, the correct feature to use for this requirement is the FortiGate explicit proxy.
