## 一生懸命にPSPO-I練習問題 & 合格スムーズPSPO-I受験準備 | 便利なPSPO-Iトレーニング

この不安の時代には、誰もが大きなプレッシャーを感じているようです。あなたがより良いなら、あなたはよりリラックスした生活を送るでしょう。PSPO-Iガイド資料を使用すると、作業の効率を高めることができます。他のことにもっと時間をかけることができます。教材を使用すると、最短時間でPSPO-I試験に合格できます。あなたは他の人よりも高い出発点に立っています。なぜPSPO-Iの練習問題が選択に値するのですか？PSPO-I試験問題のデモを無料でダウンロードして、PSPO-I学習教材の利点をご理解いただければ幸いです。

## Scrum Professional Scrum Product Owner I 認定 PSPO-I 試験問題 (Q140-Q145):

### 質問 # 140

What are two effective ways for a Scrum Team to ensure security concerns are satisfied? (choose the best two answers)

- A. Have the Scrum Team create Product Backlog items for each concern.
- B. Delegate the work to the security department.
- C. Add a Sprint to specifically resolve all security concerns.
- D. Postpone the work until a specialist can perform a security audit and create a list of security-related Product Backlog items.
- E. Add security concerns to the Definition of Done.

正解: A、E

解説:

These are the best answers because they ensure that security concerns are addressed in a transparent and consistent way. By adding security criteria to the Definition of Done, the Scrum Team can make sure that every Increment meets a high standard of quality and security. By creating Product Backlog items for specific security concerns, the Scrum Team can prioritize and plan them in collaboration with the Product Owner and stakeholders. Reference: Scrum Guide, page 14: "The Definition of Done is a formal description of the state of the Increment when it meets the quality measures required for the product." Scrum Guide, page 15: "The Product Backlog is an emergent, ordered list of what is needed to improve the product."

#### 質問 # 141

Which of the following is a typical output of a Sprint?

- A. An new Product Increment (working piece of software).
- B. Technical concepts.
- C. The plan for the next Sprint.

正解: A

#### 質問 # 142

All Scrum artifacts must be transparent to ensure sufficient accuracy of inspection. Which two measures ensure that the Product Backlog is transparent?

(choose the best two answers)

- A. The Product Backlog is managed using a web-based tool.
- B. The Product Backlog only has work for the next 2 Sprints.
- C. Each Product Backlog item has a MoSCoW priority.
- D. The Product Backlog is available to all stakeholders.
- E. The Product Backlog is ordered.

正解: D、E

解説:

Transparency is one of the three pillars of Scrum, along with inspection and adaptation. Transparency means that all aspects of the Scrum process and the product are visible and understandable to everyone who needs to work on or with them. Transparency enables effective inspection and adaptation, which are essential for delivering valuable products and improving the Scrum Team's performance.

All Scrum artifacts must be transparent to ensure sufficient accuracy of inspection. Scrum artifacts include the Product Backlog, the Sprint Backlog, and the Increment. The Product Backlog is an ordered list of everything that is known to be needed in the product. It is the single source of truth for the Scrum Team and the stakeholders. It contains all the requirements, features, functions, enhancements, fixes, and anything else that can deliver value to the customers and users of the product.

Two measures that ensure that the Product Backlog is transparent are:

The Product Backlog is ordered: The Product Owner orders the items in the Product Backlog based on factors such as value, risk, priority, dependency, feedback, or market conditions. The order of the Product Backlog items provides a clear and consistent indication of what is most important and urgent for the product. The order of the Product Backlog items also helps the Scrum Team and the stakeholders to plan and forecast effectively.

The Product Backlog is available to all stakeholders: The Product Owner makes the Product Backlog visible and accessible to everyone who has a stake in the product, such as customers, users, sponsors, managers, or other teams. The availability of the Product Backlog enables transparency, collaboration, feedback, and alignment among all parties involved in the product development.

The other options are not valid or relevant measures to ensure that the Product Backlog is transparent. They are either too restrictive, arbitrary, or unrelated to the Product Backlog's transparency. They are:

Each Product Backlog item has a MoSCoW priority: MoSCoW is a technique for prioritizing requirements based on their importance: Must have, Should have, Could have, or Won't have. While this technique can be useful for some products or contexts, it is not a mandatory or universal way to order the Product Backlog items. The Product Owner may use other factors or methods to order the Product Backlog items based on their value and relevance for the product.

The Product Backlog only has work for the next 2 Sprints: This is a too limiting and unrealistic measure for the Product Backlog. The Product Backlog should contain all the work that is known to be needed in the product, not just for the next 2 Sprints. The Product Backlog is a living artifact that evolves as the product and the market change. The Product Owner should continuously refine and update the Product Backlog to reflect the current and future needs and expectations of the customers and users.

The Product Backlog is managed using a web-based tool: This is an irrelevant measure for the Product Backlog's transparency. The

Product Owner can use any tool or format to manage the Product Backlog, as long as it is clear, concise, and valuable. The tool or format does not affect the transparency of the Product Backlog itself. What matters more is how the Product Owner communicates and collaborates with the Scrum Team and the stakeholders using the Product Backlog.

#### 質問 # 143

The Developers have some trouble to understand a Sprint Backlog item - what should they do?

- A. Collaborate with the Product Owner immediately to receive a better understanding.
- B. Ask the Scrum Master to explain it to them.
- C. Don't touch the item until the Sprint Review to discuss it with the Product Owner again.

正解: A

#### 質問 # 144

Who can cancel a Sprint?

(choose the best answer)

- A. The Product Owner.
- B. The Scrum Master
- C. The Stakeholders.
- D. The Scrum Team

正解: A

解説:

The Product Owner is the sole person responsible for managing the Product Backlog and ensuring that the value of the work the Scrum Team performs is understood by everyone involved. The Product Owner is the only person who can cancel the Sprint, although he or she may do so under influence from the stakeholders, the Development Team, or the Scrum Master<sup>1</sup>. A Sprint can be cancelled before the Sprint time-box is over.

Only the Product Owner has the authority to cancel the Sprint, although he or she may do so under influence from the stakeholders, the Development Team, or the Scrum Master. A Sprint would be cancelled if the Sprint Goal becomes obsolete. This might occur if the company changes direction or if market or technology conditions change. In general, a Sprint should be cancelled if it no longer makes sense given the circumstances. But, due to the short duration of Sprints, cancellation rarely makes sense<sup>1</sup>. References:
