How can our Network-and-Security-Foundation study questions are so famous and become the leader in the market? Because our Network-and-Security-Foundation learning braindumps comprise the most significant questions and answers that have every possibility to be the part of the real exam. As you study with our Network-and-Security-Foundation Practice Guide, you will find the feeling that you are doing the real exam. Especially if you choose the Software version of our Network-and-Security-Foundation training engine, which can simulate the real exam.

WGU Network-and-Security-Foundation Practice tests are formatted like real tests. The FreePdfDump platform provides an exceptional level of support for individuals preparing for and taking the WGU Network-and-Security-Foundation exam. Their dedicated support team is available to assist candidates with any issues or concerns related to WGU Network-and-Security-Foundation Test Preparation. Additionally, the platform offers a money-back guarantee for those who do not pass the Network-and-Security-Foundation test on their first attempt.

Exam Network-and-Security-Foundation Syllabus | Valid Network-and-Security-Foundation Test Dumps

Everybody knows that WGU is an influential company with high-end products and best-quality service. It will be a long and tough way to pass Network-and-Security-Foundation exam test, especially for people who have no time to prepare the Network-and-Security-Foundation Questions and answers. So choosing right Network-and-Security-Foundation dumps torrent is very necessary and important for people who want to pass test at first attempt.

WGU Network-and-Security-Foundation Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which layer of the OSI model includes HTTP?

- A. Transport
- B. Application
- C. Session
- D. Network

Answer: B

Explanation:

The Application layer (Layer 7 of the OSI model) includes Hypertext Transfer Protocol (HTTP), which is used for web communication. This layer provides network services directly to applications and users.

- * Network layer deals with IP addressing and packet routing.
- * Session layer manages connections but does not include HTTP.
- * Transport layer ensures reliable data transmission but does not handle application protocols.

NEW QUESTION # 23

Which CIA triad component is a driver for enabling role-based access controls?

- A. Availability
- **B. Confidentiality**
- C. Integrity
- D. Consistency

Answer: B

Explanation:

Confidentiality ensures that sensitive information is only accessible to authorized individuals. Role-Based Access Control (RBAC) enforces confidentiality by restricting access based on a user's role within an organization, ensuring that only authorized users can view or modify certain data.

- * Integrity ensures data is not altered improperly.
- * Availability ensures access to resources but does not manage permissions.
- * Consistency is not a CIA triad component.

NEW QUESTION # 24

A company has a legacy network in which all devices receive all messages transmitted by a central wire. Which network topology is described?

- A. Star
- **B. Bus**
- C. Ring
- D. Point-to-point

Answer: B

Explanation:

A Bus topology is a network setup in which all devices share a single communication channel (central wire), and data is transmitted along this cable. Each device listens for data but only processes packets addressed to it.

This topology was widely used in older Ethernet networks.

- * Star topology uses a central switch or hub, not a shared wire.
- * Point-to-point topology involves a direct link between two devices, not multiple devices sharing a medium.
- * Ring topology connects each device to two adjacent devices in a circular path, not a single shared bus.

NEW QUESTION # 25

An organization is updating its information security policies in order to comply with the Personal Information Protection and Electronic Documents Act (PIPEDA).

What should this organization expect to be required under this legislation?

- **A. Securely dispose of personally identifiable information**
- B. Disclose the software used to protect personal data
- C. Compensate individuals for revenue from the sale of their information
- D. Notify individuals each time their personal information is viewed

Answer: A

Explanation:

PIPEDA requires businesses in Canada to protect personal information through security measures and proper disposal practices. This includes secure deletion of personal data when no longer needed to prevent unauthorized access.

- * Compensating individuals for data sales is not a legal requirement.
- * Notifying individuals of each data access is unnecessary unless required by a breach.
- * Disclosing security software is not mandated by PIPEDA.

NEW QUESTION # 26

An organization has experienced a series of data breaches and needs to ensure that data remains protected even if intercepted. Which security measure should be implemented?

- A. Patch management
- B. Two-factor authentication (2FA)
- C. Role-based access control (RBAC)
- **D. Data encryption**

Answer: D

Explanation:

Data encryption protects sensitive information by encoding it into an unreadable format, ensuring that even if attackers intercept the data, they cannot decipher it without the proper decryption key. This is crucial for protecting stored and transmitted data.

* RBAC controls user access but does not secure data in transit.

* 2FA strengthens authentication but does not secure stored or transmitted data.

* Patch management fixes software vulnerabilities but does not directly protect intercepted data.

NEW QUESTION # 27

.....

Do you feel that you are always nervous in your actual Network-and-Security-Foundation exam and difficult to adapt yourself to the real exam? If your answer is yes, I think you can try to use the software version of our Network-and-Security-Foundation exam quiz. I believe the software version of our Network-and-Security-Foundation training guide will be the best choice for you, because the software version can simulate a real test environment, you can feel the atmosphere of the Network-and-Security-Foundation exam in advance by the software version.
