

Latest Esri EAEP2201 Dumps Pdf | EAEP2201 Free Exam

2026 Latest ITCertMagic EAEP2201 PDF Dumps and EAEP2201 Exam Engine Free Share: <https://drive.google.com/open?id=10pMZDeVc5mN8bazWASS7WKbKR1iGjIij>

It is known to us that our EAEP2201 study materials are enjoying a good reputation all over the world. Our study materials have been approved by thousands of candidates. You may have some doubts about our product or you may suspect the pass rate of it, but we will tell you clearly, it is totally unnecessary. If you still do not trust us, you can choose to download demo of our EAEP2201 Test Torrent. Now I will introduce you our Enterprise Administration Professional 2201 exam tool in detail, I hope you will like our product.

The EAEP2201 Certification Exam is a challenging exam that requires extensive preparation and experience in GIS administration. Candidates who pass EAEP2201 exam can demonstrate their expertise in managing and administering enterprise GIS systems, which can lead to better job opportunities and higher salaries in the GIS industry.

Esri EAEP2201 (Enterprise Administration Professional 2201) Certification Exam is a professional certification that is designed to validate the knowledge and skills of individuals who are responsible for the administration of Esri's ArcGIS Enterprise software. Enterprise Administration Professional 2201 certification exam tests the knowledge and skills required to manage an ArcGIS Enterprise deployment, including the installation, configuration, and maintenance of the software.

Esri EAEP2201 Free Exam | EAEP2201 Test Discount

Most of the materials on the market do not have a free trial function. Even some of the physical books are sealed up and cannot be read before purchase. As a result, many students have bought materials that are not suitable for them and have wasted a lot of money. Especially for those students who are headaches when reading a book, EAEP2201 study tool is their gospel. Because doing exercises will make it easier for one person to concentrate, and at the same time, in the process of conducting a mock examination to test yourself, seeing the improvement of yourself will makes you feel very fulfilled and have a stronger interest in learning. EAEP2201 Guide Torrent makes your learning process not boring at all.

Esri EAEP2201 exam is a professional certification exam offered by Esri for individuals who specialize in Enterprise Administration. EAEP2201 exam tests how well candidates are equipped to administer and manage various Esri enterprise level software solutions. As technology continues to revolutionize how businesses collect, manage and use data, it becomes crucial for IT professionals to demonstrate a deep understanding of Esri's Enterprise technology. The EAEP2201 Exam is designed to certify that individuals possess the necessary skills and knowledge to manage and administer the Esri Software solutions in the Enterprise space.

Esri Enterprise Administration Professional 2201 Sample Questions (Q41-Q46):

NEW QUESTION # 41

A GIS administrator receives reports from users about a map service that is slow to draw. The service has the following characteristics:

- * Numerous detailed features
- * Complex symbology
- * Scale-dependent rendering
- * Infrequently updated
- * Query capability enabled
- * Uses shared instances

Which action should the administrator perform?

- **A. Configure the map service to use cached tiles**
- B. Use dedicated instances instead of shared instances
- C. Eliminate scale-dependent rendering

Answer: A

Explanation:

For map services that are infrequently updated and contain numerous detailed features with complex symbology, configuring the service to use cached tiles is the most effective way to improve drawing performance. Cached map services pre-render map images at various scales and store them, allowing for faster display to users. This approach is particularly beneficial when the data does not change frequently, as it reduces the server's processing load during user interactions.

Eliminating scale-dependent rendering (Option B) may lead to performance degradation, as it could result in rendering all features at all scales, increasing the amount of data processed and displayed unnecessarily.

Switching to dedicated instances (Option C) can improve performance in some scenarios, but it also increases resource usage on the server. Given that the service is infrequently updated and the primary concern is drawing performance, caching is the more efficient and scalable solution.

Reference Source: ArcGIS Enterprise documentation on optimizing map services for performance.

NEW QUESTION # 42

Users are reporting service timeouts and performance issues. The administrator notices that only the minimum number of instances are running during performance spikes. They want to monitor usage trends before adjusting instance settings.

Which action should the administrator perform?

- **A. Create a report of server statistics in ArcGIS Server Manager**
- B. Enable Windows Performance Monitor
- C. Change the log level to Debug in ArcGIS Server Manager
- D. Monitor Task Manager on each ArcGIS Server machine

Answer: A

Explanation:

To monitor usage patterns, including the number of requests and instances in use, ArcGIS Server provides statistics reports in Server Manager. These reports show peak and average service usage, helping administrators decide how to scale service instance counts.

From ArcGIS Server documentation:

"Use the ArcGIS Server Manager statistics reporting tool to monitor service usage trends over time. This data helps inform adjustments to instance counts."

* Option A gives only raw system metrics, not service-specific insights.

* Option B (Debug logs) causes overhead and isn't appropriate for monitoring trends.

Reference: ArcGIS Server - Monitoring and Reporting Service Usage Statistics

NEW QUESTION # 43

A GIS contractor is developing and testing an upcoming workflow for a client. The contractor is publishing fictional hydrant locations as a service to be consumed in a custom application. The contractor wants to consume as few resources as possible for the client's ArcGIS Server because they do not have a testing environment.

Which type of service should the contractor publish?

- **A. Hosted feature service**
- B. Non-hosted feature service
- C. Scene service
- D. Non-hosted map service

Answer: A

Explanation:

The contractor should publish a hosted feature service. Hosted feature services are managed entirely by the ArcGIS Data Store, not by the ArcGIS Server site directly. This means they consume fewer server resources since they are not managed by a dedicated ArcGIS Server site's memory or CPU at runtime the way traditional services are.

From ArcGIS documentation:

"Hosted feature layers (services) are stored in and powered by the ArcGIS Data Store, relieving ArcGIS Server from managing service processes. This is ideal for testing, lightweight apps, or non-production workflows when minimizing load on the GIS Server is desired."

* Option B (Non-hosted map service) would require server-side management and is more resource-intensive.

* Option C (Scene service) is used for 3D visualization and is not appropriate for 2D hydrant location data.

* Option D (Non-hosted feature service) would also consume more ArcGIS Server resources.

Reference: ArcGIS Enterprise - Understanding hosted layers vs. services on GIS Server

NEW QUESTION # 44

A GIS analyst is running raster analysis in the ArcGIS Enterprise portal Map Viewer. The input data is an image layer, but the output of the raster analysis is a feature layer.

Which ArcGIS Server will host the output feature service?

- A. ArcGIS Raster Analytics Server site
- **B. ArcGIS Hosting Server site**
- C. ArcGIS Image Hosting Server site

Answer: B

Explanation:

In ArcGIS Enterprise, when performing raster analysis that results in feature data (e.g., vector outputs), the ArcGIS Hosting Server is responsible for hosting the resulting feature services. The Raster Analytics Server processes the raster data, and the output is then stored in the ArcGIS Data Store associated with the Hosting Server, which subsequently serves the feature layer.

The Image Hosting Server is primarily used for hosting large imagery datasets and does not handle feature services. The Raster Analytics Server conducts the analysis but does not host the output services.

Reference Source: ArcGIS Enterprise documentation on configuring and deploying raster analytics

NEW QUESTION # 45

A GIS administrator is responsible for maintaining the stability of a large internal ArcGIS Enterprise deployment. After the Domain CA certificate is replaced with a new one and the new PKCS#12 format PFX file is imported into all Portal for ArcGIS, ArcGIS Server, and ArcGIS Data Store deployments, the following issues are identified:

* When connecting directly to the Portal for ArcGIS administration endpoint via port 7443, the new certificate is not recognized and is considered invalid

* When connecting directly to the ArcGIS Server administration endpoint via port 6443, the new certificate is not recognized and is considered invalid

* When connecting to the ArcGIS Data Store endpoint via port 2443, the new certificate is recognized and considered valid What is causing this issue?

- **A. ArcGIS Server and Portal for ArcGIS require that new root and new issuing authority certificates be imported explicitly into the software**
- B. ArcGIS Server and Portal for ArcGIS are not compatible with PKCS#12 certificates
- C. Domain CA certificates are no longer supported by ArcGIS Server and Portal for ArcGIS and should be replaced by self-signed certificates
- D. Domain CA certificates must be imported using a DER encoded binary X.509 (CER) format file for ArcGIS Server and Portal for ArcGIS

Answer: A

Explanation:

When replacing SSL certificates in ArcGIS Enterprise components, ArcGIS Server and Portal for ArcGIS require the root and intermediate (issuing) certificates to be explicitly imported into their trust stores.

Unlike the ArcGIS Data Store, which can often rely on the system-level trust store, ArcGIS Server and Portal maintain their own certificate trust management.

From the official ArcGIS Enterprise documentation:

"When using certificates issued by an internal or external CA, it is essential to also import the corresponding root and intermediate certificates into the Portal for ArcGIS and ArcGIS Server trust stores to ensure the certificate chain is validated properly."

* OptionBis incorrect. Domain CA certificates are supported and recommended over self-signed certificates for internal deployments.

* OptionC refers to an acceptable format but does not address the issue, which is about importing the chain of trust.

* OptionDis incorrect; PKCS#12 (.pfx) certificates are supported but must be paired with the correct chain files.
