302題庫 & 302考試

302 擬真試題含蓋真實的考試指南，保證考生順利通過 302 考試。考生需要在一定的時間內完成所有的 F5 302 考試測驗題，該考試隸屬于F5 認證助理認證體系。考生可以先到考試中心去打聽這科考試的有關的情況。了解考試的流程，考試的注意事項。預約一個合適的時間去報名參加 302 考試即可。

最新的 F5 Certification 302 免費考試真題 (Q343-Q348):

問題 #343
How many SOA Record exist in the Zone ?

- A. 4 SOA Should be for each DNS Zone
- B. 2 SOA Should be for each DNS Zone
- C. One SOA Should be for each DNS Zone
- D. None

答案：C

解題說明：
In DNS, the Start of Authority (SOA) record is a mandatory record in every DNS zone. It contains important information about the zone, such as the primary name server, the email address of the administrator responsible for the zone, the serial number for versioning, and other parameters. Therefore, there should be one SOA record for each DNS zone.

F5 GTM concept

問題 #344

According to which Structure the F5 will Operate to apply the Configuration change in the Synchronization Group ?

- A. "commit_id" Structure that is linked to an NCP Transaction
- B. "commit_id" Structure that is linked to an MCP Transaction

答案：B

解題說明：
The "commit_id" structure is linked to an MCP (Management Control Plane) Transaction in F5. When a configuration change is made in the Synchronization Group, the F5 device will operate according to this structure to apply the change. The MCP Transaction ensures that the configuration change is properly synchronized across the devices in the group.

iQuery - Synchronization Issues

問題 #345
What is the meaning of Recursive Query ?

- A. This type of Query allows the DNS server to direct the client system to other DNS Server that will help resolving the Query
- B. The DNS Receiver will continue to query other servers until getting the resolution or even an error message indicating that the FQDN Doesn't exist Correct selection
- C. The DNS Server will Query other DNS Servers to resolve the Query

答案：B

解題說明：
Recursive Query in DNS refers to the process where the DNS server will continue to query other servers on behalf of the client until it gets a resolution or an error message indicating that the Fully Qualified Domain Name (FQDN) doesn't exist. This means that the DNS server will not just provide a referral to another server but will actively seek the answer for the client.
In a Recursive Query, the DNS server itself will query other DNS servers to resolve the query on behalf of the client. This means that the DNS server takes full responsibility for finding the answer to the query and does not rely on the client to perform additional queries.

DNS Data flow

問題 #346
What is the GTM Servers Configuration Object ?

- A. The servers that host the virtual servers that are pointing to the back end resources or application servers
- B. The virtual servers that are pointing to the back end resources or application servers
- C. They are the physical systems which are hosting the Virtual servers
- D. They are virtual systems

答案：A,C

解題說明：
GTM Servers Configuration Object refers to the physical systems that host the Virtual servers. These physical systems are responsible for hosting the virtual servers that direct traffic to the backend resources or application servers.
GTM Servers Configuration Object includes the servers that host the virtual servers that point to the backend resources or application servers. These servers play a crucial role in directing traffic and managing the load balancing of the application.

問題 #347
What will happen if you cannot provide to the F5 Technical support a remote access to the system suffering from the issue ?

- A. The Technical support will work Directly with the Admin by phone or email
- B. The Admin must provide the UCS Archive of the Current configuration

- C. That will require file transfers , replication and additional testing

答案：**A,B,C**

解題說明：
The Technical support will not support the case
there is no need file transfers , replication and additional testing
If remote access cannot be provided, the F5 Technical support team will resort to working directly with the Admin through phone or email to troubleshoot and resolve the issue. This allows for communication and collaboration between the support team and the Admin without the need for remote access.
In the absence of remote access, file transfers, replication, and additional testing may be required to diagnose and address the issue. This process may involve transferring files, replicating the issue in a controlled environment, and conducting further testing to identify the root cause.
If remote access is not possible, the Admin may be asked to provide the UCS Archive of the current configuration. This archive contains the configuration details of the system suffering from the issue, which can help the support team analyze and troubleshoot the problem without direct access to the system.
