HCLSoftware Certified Administrator- HWA 10.2 Sample Questions (Q598-Q603):

NEW QUESTION # 598

Scenario: Variable tables are used to parameterize scripts across environments in HCL Workload Automation 10.2. What ensures resolution at runtime?

- A. Prompt at submission
- B. Agent local parameters
- C. Scope assignment to job or job stream
- D. Security permissions
- E. Global default table

Answer: C

Explanation:

Assigning variable tables at job, job stream, or folder level ensures variables are resolved when the object is added to the plan or at runtime, enabling environmentspecific customization without script modifications.

NEW QUESTION # 599

Configuring authentication HCL HWA 10.2 LDAP with nested groups fails role assignment: "User not member of TWSAdmins". Active Directory shows user in nested OU but Liberty basicRegistry ignores hierarchy. Required Liberty configDropins/overrides/auth_LDAP_config.xml setting?

- A. `<ldapRegistry id="corpLDAP" ldapType="MicrosoftActiveDirectory" groupFilter="(&(member=%dn)(objectClass=group))"`
- B. LDAP nested groups unsupported, flatten hierarchy in AD
- C. `auth_AD_config.xml: searchScope="subtree" groupMemberAttribute="member:uniqueName"`
- D. `<activedFilters nestedGroups="recursive"/>`

Answer: A

Explanation:

Active Directory recursive group membership requires specific LDAP filter. configDropins/overrides/auth_AD_config.xml: `<ldapRegistry id="adRegistry" ...groupFilter="(&(member=%dn)(objectClass=group))" userFilter="(&(sAMAccountName=%u)(objectClass=person))" baseDN="DC=corp,DC=com"/>` recursively resolves nested groups. Liberty assigns TWSAdmins role correctly.

NEW QUESTION # 600

Which global option interacts with job stream carry forward to determine which job states are included in carried instances?

- A. enCarryJobs
- B. includedStates
- C. stagemanStates
- D. carryStates
- E. forwardJobStates

Answer: D

Explanation:

The carryStates global option specifies comma-separated job states (e.g., HOLD, PEND, EXEC) to include when carrying forward job streams. It works with enCarryForward to control which incomplete jobs appear in the new plan's carried instances.

NEW QUESTION # 601

Which global option enables automatic activation of new security domains in the security file when created via Dynamic Workload Console?

- A. autoActivateDomains
- **B. enRoleBasedSecurityFileCreation**
- C. enDomainAutoAdd
- D. enAutoSecFileUpdate
- E. securityDomainGlobal

Answer: B

Explanation:

Setting enRoleBasedSecurityFileCreation to yes automatically activates newly created security domains in the centralized security file, streamlining role-based access control management when domains are defined through the console.

NEW QUESTION # 602

Configuring authentication HCL HWA 10.2 with custom JAAS module fails password complexity enforcement. Liberty auth_basicRegistry accepts 8-char passwords but policy requires 15+ chars. Required custom login module?

- A. basicRegistry password policy configured in server.xml
- **B. Implement javax.security.auth.spi.LoginModule validatePassword() returning Status.SUCCESS only for compliant passwords**
- C. securityUtility encode enforces complexity automatically
- D. LDAP handles password complexity validation

Answer: B

Explanation:

Custom JAAS LoginModule enforces enterprise password policy. \$WLP/usr/shared/resources/security/customAuth.jar implements validatePassword() checking length, composition, history. server.xml: <jaasLoginModule loginModuleRef="customPolicyModule" /> rejects weak passwords during authentication.
