SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q20-Q25):

NEW QUESTION # 20

Which capability allows combining SAP and non-SAP data without physical replication?

Please choose the correct answer.

Response:

- A. Data Marketplace
- B. ETL Scheduling
- **C. Remote Tables**
- D. Flat File Upload

Answer: C

NEW QUESTION # 21

How can you create a local table with a custom name in SAP Datasphere? Note: There are 2 correct answers to this question.

- A. By creating a persistent snapshot of a view
- **B. By adding an output of a data flow**
- C. By creating an intelligent lookup
- **D. By importing a CSV file**

Answer: B,D

Explanation:

In SAP Datasphere, there are several ways to create a local table with a custom name, providing flexibility for data management. Two common methods are by importing a CSV file and by adding an output of a data flow. When you import a CSV file, Datasphere allows you to specify a custom name for the new local table that will store the imported data. This is a quick and straightforward way to bring external, flat-file data into Datasphere. Secondly, a data flow in Datasphere allows you to define a sequence of operations (e.g., transformations, aggregations) and write the processed data to a target. When configuring the output of a data flow, you can specify a new local table and provide it with a custom name. This method is ideal for creating structured tables as a result of complex data integration or transformation processes. These options ensure that users can create and name tables according to their specific data modeling and organizational requirements.

NEW QUESTION # 22

Which of the following best describes the Data Flow feature in SAP Business Data Cloud?

Please choose the correct answer.

Response:

- A. A predefined business content library
- B. A tool for visualizing dashboards in SAP Analytics Cloud
- **C. A graphical tool for designing ETL pipelines**
- D. A process for managing user security and compliance

Answer: C

NEW QUESTION # 23

What lets you create 1 or more models that learn from your historical data?

Please choose the correct answer.

Response:

- **A. Smart Predict**
- B. Predictive Forecast
- C. Smart Insights

Answer: A

NEW QUESTION # 24

In an SAP Analytics Cloud planning data model, which dimensions are included by default? Note: There are 2 correct answers to this question.

- **A. Version**
- B. Entity
- C. Organization
- **D. Date**

Answer: A,D

Explanation:

When creating a planning data model in SAP Analytics Cloud (SAC), certain dimensions are included by default to facilitate common planning scenarios. The two key dimensions automatically present are Version and Date. The Version dimension is crucial for distinguishing between different planning scenarios, such as "Actual," "Budget," "Forecast," or "Plan 2025," allowing users to compare and manage various iterations of their planning data. The Date dimension, on the other hand, is essential for time-based planning and analysis, enabling data entry, aggregation, and reporting across different time granularities like years, quarters, months, or days. These default dimensions provide a robust framework for financial and operational planning, serving as foundational elements around which planning activities are structured, and ensuring consistency and comparability across different planning versions and time periods.
