Get Updated Salesforce AP-202 Exam Questions (2026)

Before you can become a professional expert in Salesforce technology, you need to pass AP-202 exam test. It means you should get the AP-202 certification. The AP-202 actual exam is challenging and passing is definitely requires a lot of hard work and effort. TestValid will provide the latest and valid AP-202 test study material to you. It just needs to be taken 20-30 hours for preparation, then you can attend the actual test with confident. Besides, in case of failure, we will give you full refund. While, 100% pass is the guarantee we promise to our customers.

Salesforce B2B Commerce for Developers Accredited Professional Sample

Questions (Q127-Q132):

NEW QUESTION # 127
Which two statement are true for Mass Order (2 answers)

- A. Mass Order is mobile ready with the ccrz templates.
- B. The variation product is leveraged for SKUs.
- C. Mass Order pricing is done via a batch job.
- D. Mass order works with thedefault wishlists

Answer: B,C

Explanation:
Mass Order pricing is done via a batch job, which means that the prices are not calculated in real time, but rather at a scheduled time. Mass order works with the variation product, which is a product that has multiple SKUs with different attributes, such as size or color. Mass order does not work with the default wishlists, which are used to store products that the customer wants to buy later. Mass order is not mobile ready with the ccrz templates, which are the default templates for the storefront pages. Salesforce B2B Commerce Developer Guide: Mass Order,B2B Commerce Developer Guide: Variation Products

NEW QUESTION # 128
Which two different types of services do Salesforce B2B

- A. Hook services which are extension points for subscribers to tie into.
- B. Commerce APIs leverage? (2 answers) A) Logic services which are responsible for implementing business logic associated with entities.
- C. Data services which are responsible for querying and transforming data from entities
- D. Global services which are responsible for querying and transforming data from entities

Answer: B,C

Explanation:
Two different types of services that Salesforce B2B Commerce APIs leverage are:
Logic services which are responsible for implementing business logic associated with entities. These services are defined in the logic classes, such as ccrz.ccLogicCart, ccrz.ccLogicOrder, or ccrz.ccLogicProduct. These classes provide methods for validating inputs, performing calculations, applying rules, or updating data for each entity.
Data services which are responsible for querying and transforming data from entities. These services are defined in the service classes, such as ccrz.ccServiceCart, ccrz.ccServiceOrder, or ccrz.ccServiceProduct. These classes provide methods for creating, reading, updating, and deleting data for each entity. Salesforce B2B Commerce and D2C Commerce Developer Guide,Service Classes,Logic Classes

NEW QUESTION # 129
The ccrz.cc_hk_UserInterface apex class, HTMLHead Include Begin and HTML Head Include End Cloudcraze Page Include sections allow additional content to be added to the HTML <head> tag. What are two reasons that is it preferred to use the ccrz.cc_hk_UserInterface extension over the Cloudcraze Page Include sections? (2 answers)

- A. Salesforce apex:include is wrapped in <span> tags.
- B. Salesforce apex:include is wrapped in tags.
- C. HTML does not support <div> tags inside the <head>
- D. HTML does not support <span> tags inside the <head>

Answer: A,D

Explanation:
The ccrz.cc_hk_UserInterface apex class is preferred over the HTMLHead Include Begin and HTML Head Include End Cloudcraze Page Include sections because Salesforce apex:include is wrapped in <span> tags, which are not valid inside the HTML <head> tag. This can cause rendering issues or unexpected behavior in some browsers. The ccrz.cc_hk_UserInterface extension allows adding content to the HTML <head> tag without using apex:include.

NEW QUESTION # 130

In which two ways can events fired from Lightning web components be handled?

- **A. Attaching handlers to DOM elements**
- **B. Programmatically adding event listeners**
- C. Adding callbacks to components
- D. Listening for all possible events at the document root

Answer: A,B

Explanation:

Two ways that events fired from Lightning web components can be handled are programmatically adding event listeners and attaching handlers to DOM elements. Programmatically adding event listeners is a way of handling events by using JavaScript code to register functions that are invoked when an event occurs. The developer can use methods such as addEventListener or @wire to add event listeners to components or services that fire events. Attaching handlers to DOM elements is a way of handling events by using HTML attributes to bind functions that are invoked when an event occurs. The developer can use attributes such as onclick or onchange to attach handlers to DOM elements that fire events. Adding callbacks to components is not a valid way of handling events fired from Lightning web components, as it is not related to event handling, but rather to asynchronous programming. Listening for all possible events at the document root is not a valid way either, as it is not efficient or recommended for event handling, as it can cause performance issues or conflicts with other event listeners. Salesforce [Lightning Web Components Developer Guide: Handle Events], [Lightning Web Components Developer Guide: Communicate with Events]

NEW QUESTION # 131

Numerous flags when set, have a direct impact on the result set provided by the Global API's. Which conversion flag allows for sObjects to be returned from the Global API's when provided as a Boolean parameter with a value of true?

- A. ccrz.ccAPISizing.SKIPTRZ
- B. ccrz.ccAPISizing.SOBJECT
- C. ccrz.ccAPI.SZ_SKIPTRZ
- **D. ccrz.ccAPI.SZ_SOBJECT**

Answer: D

Explanation:

The conversion flag that allows for sObjects to be returned from the Global API's when provided as a Boolean parameter with a value of true is ccrz.ccAPI.SZ_SOBJECT. This flag indicates that the API should return the raw sObjects instead of the transformed objects that are usually returned by the API. For example,ccrz.ccServiceProduct.getProducts(ccrz.ccAPI.SZ_SOBJECT,true)will return the Product2 sObjects instead of the ccrz__E_Product__c objects.
