FreeDumps also presents desktop-based Microsoft AZ-120 practice test software which is usable without any internet connection after installation and only required license verification. Microsoft AZ-120 practice test software is very helpful for all those who desire to practice in an actual Planning and Administering Microsoft Azure for SAP Workloads (AZ-120) exam-like environment. Planning and Administering Microsoft Azure for SAP Workloads (AZ-120) practice test is customizable so that you can change the timings of each session. FreeDumps desktop Microsoft AZ-120 practice test questions software is only compatible with windows and easy to use for everyone.

To pass the Microsoft AZ-120 exam, candidates must demonstrate their ability to manage SAP workloads on Azure effectively. They must have a deep understanding of the Azure infrastructure and how it supports SAP applications, as well as the ability to deploy and configure Azure virtual machines and storage solutions. Candidates must also be familiar with Azure networking and security features, including virtual networks, firewalls, and access controls. Additionally, they must be able to monitor and troubleshoot SAP workloads on Azure, using tools like Azure Monitor and Azure Log Analytics. Overall, the Microsoft AZ-120 Exam is an excellent opportunity for professionals who want to expand their knowledge and skills in managing SAP workloads on the Azure platform.

Real Microsoft Exam Questions And Answers From AZ-120

We have authoritative production team made up by thousands of experts helping you get hang of our Planning and Administering Microsoft Azure for SAP Workloads study question and enjoy the high quality study experience. We will update the content of AZ-120 test guide from time to time according to recent changes of examination outline and current policies, so that every examiner can be well-focused and complete the exam focus in the shortest time. Besides, our AZ-120 Exam Questions can help you optimize your learning method by simplifying obscure concepts so that you can master better. One more to mention, with our AZ-120 test guide, there is no doubt that you can cut down your preparing time in 20-30 hours of practice before you take the exam.

Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q161-Q166):

NEW QUESTION # 161

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

In a Hybrid-IT scenario, Active Directory from on-premises can be extended to serve as the authentication mechanism through an Azure deployed domain controller (as well as potentially using the integrated DNS).

It is important to distinguish between traditional Active Directory Servers and Microsoft Azure Active Directory that provides only a subset of the traditional on-premises AD offering. This subset include Identity and Access Management, but does not have the full AD schema or services that many 3rd party application take advantage of. While Azure Active Directory IS a requirement to establish authentication for the Azure virtual machines in use, and it can synchronize users with customers' on-premises AD, the two are explicitly different and customers will likely continue to require full Active Directory servers deployed in Microsoft Azure.

NEW QUESTION # 163

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 164

You have an SAP environment on Azure.

You use Azure Site Recovery to protect an SAP production landscape.

You need to validate whether you can recover the landscape in the event of a failure. The solution must minimize the impact on the landscape.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

Step 1: Create a virtual network...

We recommend that for test failover, you choose a network that's isolated from the production recovery site network specific in the Compute and Network settings for each VM. By default, when you create an Azure virtual network, it is isolated from other networks. The test network should mimic your production network:

The test network should have same number of subnets as your production network. Subnets should have the same names.

The test network should use the same IP address range.

Step 2: Add a public IP address...

Because Site Recovery does not replicate the cloud witness, we recommend that you deploy the cloud witness in the disaster recovery region.

Step 3: Shut down production virtual machines

Make sure that the primary VM is shut down when you run the test failover. Otherwise there will be two VMs with the same identity, running in the same network at the same time. This can lead to unexpected consequences.

Step 4: Select Test failover from the Recovery Plans blade

NEW QUESTION # 165

Your on-premises network contains an Active Directory domain.

You are deploying a new SAP environment on Azure.

You need to configure SAP Single Sign-On to ensure that users can authenticate to SAP GUI and SAP WebGUI.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

NEW QUESTION # 166

.....

With our AZ-120 practice test software, you can simply assess yourself by going through the AZ-120 practice tests. We highly recommend going through the AZ-120 answers multiple times so you can assess your preparation for the AZ-120 exam. Make sure that you are preparing yourself for the AZ-120 test with our practice test software as it will help you get a clear idea of the real AZ-120 exam scenario. By passing the exams multiple times on practice test software, you will be able to pass the real AZ-120 test in the first attempt.
