CompTIA SK0-005 Pdf Demo Download - SK0-005 Exam Sample Online

You can instantly download CompTIA Server+ Certification Exam SK0-005 PDF questions file, desktop practice test software, and web-based CompTIA SK0-005 practice test software. You can test the features of all these three CompTIA SK0-005 Practice Questions formats before buying because Itbraindumps offers a free demo download facility. You will also be given free CompTIA SK0-005 exam questions updates.

CompTIA Server+ Certification Exam Sample Questions (Q93-Q98):

NEW QUESTION # 93

A junior administrator reported that the website used for anti-malware updates is not working. The senior administrator then discovered all requests to the anti-malware site are being redirected to a malicious site.

Which of the following tools should the senior administrator check first to identify the potential cause of the issue?

- A. File integrity monitor
- B. Data loss prevention
- C. Sniffer
- D. Port scanner

Answer: C

Explanation:

A sniffer (also known as a packet analyzer) is a tool that captures and inspects data packets traveling across the network. In this case, using a sniffer would help identify suspicious or malicious redirection of traffic, possibly caused by a man-in-the-middle attack, DNS hijacking, or malware.

* Sniffer (Answer D): This tool will allow the senior administrator to inspect the network traffic and identify if and how requests to the anti-malware website are being intercepted or redirected.

* Data loss prevention (Option A): DLP tools focus on preventing data leakage rather than analyzing traffic redirection.

* File integrity monitor (Option B): This checks for unauthorized changes to files, which may not directly address network traffic redirection.

* Port scanner (Option C): A port scanner would only identify open ports on devices, which is unrelated to the redirection issue.

CompTIA Server+ Reference: This topic is addressed under SK0-005 Objective 4.2: Explain server roles and their purposes.

NEW QUESTION # 94

A technician is setting up a repurposed server. The minimum requirements are 2TB while ensuring the highest performance and providing support for one drive failure. The technician has the following six drives available:

* 500GB, 10,000rpm

* 600GB, 10,000rpm

* 500GB, 7,200rpm

* 500GB, 10,000rpm

* 600GB, 15,000rpm

* 600GB, 10,000rpm

Which of the following drive selections should the technician utilize to best accomplish this goal?

- A. 1, 2, 4, and 6
- B. 1, 2, 3, 4, and 6
- C. 1, 2, 3, 5, and 6
- D. 1, 2, 4, 5, and 6

Answer: D

Explanation:

The goal is to achieve 2TB total storage, high performance, and support for one drive failure. Using RAID 5 or RAID 10 can provide redundancy while maximizing performance.

* 1, 2, 4, 5, and 6 (Answer C): This selection includes the highest-capacity and highest-performance drives (600GB and 500GB at high RPM speeds). Using these drives will provide the necessary capacity (500GB + 600GB + 500GB + 600GB + 600GB = 2.8TB) and performance with one drive redundancy (RAID 5 or 10).

* Other options (A, B, D): These combinations either lack the necessary capacity or mix slower drives (7,200rpm), reducing overall performance.

CompTIA Server+ Reference: This topic is covered under SK0-005 Objective 1.5: Explain storage technologies and RAID configurations.

NEW QUESTION # 95

Two developers are working together on a project, and they have built out a set of snared servers that both developers can access over the internet. Which of the following cloud models is this an example of?

- A. Community
- B. Private
- C. Hybrid
- D. Public

Answer: D

Explanation:

A public cloud is a cloud model that provides shared resources and services over the internet to multiple users or organizations. The cloud provider owns and manages the infrastructure and charges users based on their usage or subscription. A public cloud can offer scalability, flexibility, and cost-efficiency for users who need access to various applications and data without investing in their own hardware or software. Verified Reference: [Public cloud], [Cloud model]

NEW QUESTION # 96

A server administrator is testing a disaster recovery plan. The test involves creating a downtime scenario and taking the necessary steps. Which of the following testing methods is the administrator MOST likely performing?

- A. Live failover
- B. Tabletop
- C. Simulated
- D. Backup recovery

Answer: A

Explanation:

The live failover testing method is the most likely one that the server administrator is performing when creating a downtime scenario and taking the necessary steps. A live failover test involves switching from the primary system to the secondary system (or backup site) in a real environment, without any simulation or preparation. A live failover test can evaluate the effectiveness and readiness of the disaster recovery plan, but it also carries a high risk of data loss, corruption, or disruption. Reference:

NEW QUESTION # 97

While deploying a new four-node web server cluster, a systems administrator has been instructed to use a technology that will make the website highly available without incurring any additional hardware costs. Which of the following clustering options is the BEST solution?

- A. Active-passive
- B. Active-active
- C. All-nodes
- D. Round robin

Answer: D

NEW QUESTION # 98

.....

They work together and put all their efforts to ensure the top standard of CompTIA SK0-005 exam practice test questions. The SK0-005 exam practice test questions are being offered in three different formats. These CompTIA SK0-005 Exam Questions formats are PDF dumps files, desktop practice test software, and web-based practice test software.
