## ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q145-Q150):

### NEW QUESTION # 145

Which of the following BEST enables an IT privacy practitioner to ensure appropriate protection for personal data collected that is required to provide necessary services?

- A. Encrypting the data throughout its life cycle
- B. Anonymizing privacy data during collection and recording
- C. Understanding the data flows within the organization
- D. Implementing strong access controls on a need-to-know basis

**Answer: C**

Explanation:

Reference:

The best way for an IT privacy practitioner to ensure appropriate protection for personal data collected that is required to provide necessary services is to understand the data flows within the organization. Data flows are the paths or processes through which personal data moves within or outside the organization, from the point of collection to the point of disposal. Understanding the data flows helps to identify and analyze the privacy risks and impacts of data processing activities, such as data collection, storage, processing, sharing, and disposal. Understanding the data flows also helps to determine and apply the appropriate measures to protect personal data, such as data minimization, consent, access, rectification, erasure, portability, security, breach notification, etc. Understanding the data flows also helps to comply with the applicable privacy regulations and standards that govern data processing activities. Reference: : CDPSE Review Manual (Digital Version), page 97

### NEW QUESTION # 146

Which of the following MUST be available to facilitate a robust data breach management response?

- A. Lessons learned from prior data breach responses
- B. An inventory of previously impacted individuals
- C. Best practices to obfuscate data for processing and storage
- D. An inventory of affected individuals and systems

**Answer: D**

### NEW QUESTION # 147

It is MOST important to consider privacy by design principles during which phase of the software development life cycle (SDLC)?

- A. Requirements definition

- B. Implementation
- C. Testing
- D. Application design

**Answer: A**

Explanation:

Explanation

Requirements definition is a phase of the software development life cycle (SDLC) that involves gathering, analyzing and documenting the functional and non-functional requirements of the software system or application, such as features, performance, security and usability. It is most important to consider privacy by design principles during this phase, as it would help to ensure that privacy is embedded and integrated into the software system or application from the outset, rather than as an afterthought or an add-on.

Considering privacy by design principles during requirements definition would also help to avoid costly rework or delays later in the SDLC, as well as to enhance customer trust and satisfaction, and comply with privacy laws and regulations. The other options are not as important as requirements definition in considering privacy by design principles. Application design is a phase of the SDLC that involves creating and specifying the architecture, components, interfaces and data models of the software system or application, based on the requirements defined in the previous phase. Implementation is a phase of the SDLC that involves coding, testing and debugging the software system or application, based on the design specifications created in the previous phase. Testing is a phase of the SDLC that involves verifying and validating that the software system or application meets the requirements and expectations of the users and stakeholders, as well as identifying and fixing any defects or errors<sup>1</sup>, p. 88-89 References: 1: CDPSE Review Manual (Digital Version)

#### NEW QUESTION # 148

An organization is developing a wellness smartwatch application and is considering what information should be collected from the application users. Which of the following is the MOST legitimate information to collect for business reasons in this situation?

- A. Height, weight, and activities
- B. Education and profession
- C. Race, age, and gender
- **D. Sleep schedule and calorie intake**

**Answer: D**

#### NEW QUESTION # 149

What is the PRIMARY means by which an organization communicates customer rights as it relates to the use of their personal information?

- A. Mailing rights documentation to customers
- B. Publishing a privacy notice
- **C. Gaining consent when information is collected**
- D. Distributing a privacy rights policy

**Answer: C**

#### NEW QUESTION # 150
