

Reliable HPE7-A01 Exam Pattern & HPE7-A01 Free Test Questions

BONUS!!! Download part of ActualTestsIT HPE7-A01 dumps for free: https://drive.google.com/open?id=1znL_fyTIEhW-sj_kZOSLoIjyWuZU0y6

There is nothing more important than finding the best-quality HPE7-A01 practice questions for your exam preparation that will appear in the HPE7-A01 actual test. To help our candidate solve the difficulty of HPE7-A01 real exam, we prepared the most reliable questions and answers for the exam preparation, which comes in three versions. Our aim is help our candidates realize their ability by practicing our HPE7-A01 Exam Questions and pass exam easily.

HP HPE7-A01 (Aruba Certified Campus Access Professional) Exam is an industry-recognized certification exam for IT professionals who specialize in designing, implementing, and managing Aruba networking solutions. Aruba Certified Campus Access Professional Exam certification exam is designed to validate the skills and knowledge required for professionals to configure, optimize, and troubleshoot Aruba WLANs (Wireless Local Area Networks) in campus environments.

Free PDF Quiz HP - The Best Reliable HPE7-A01 Exam Pattern

The ActualTestsIT wants to help students ace the certification exam preparation. To achieve this goal the ActualTestsIT is offering real, valid, and updated exam questions in three different formats. These HP HPE7-A01 exam questions formats are PDF file, desktop practice test software, and web-based practice test software. All these three HPE7-A01 Exam Practice question formats are easy to use. The HPE7-A01 desktop practice test software and web-based practice test software both are the easy-to-use mock Aruba Certified Campus Access Professional Exam (HPE7-A01) exam. These HPE7-A01 mock exams are designed to simulate the conditions of a real exam.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q86-Q91):

NEW QUESTION # 86

Which statements regarding Aruba NAE agents are true? (Select two)

- A. A single NAE script can be used by multiple NAE agents
- B. A single NAE agent can be used by multiple NAE scripts.
- C. NAE agents will never consume more than 10% of switch processor resources
- D. NAE scripts must be reviewed and signed by Aruba before being used
- E. NAE agents are active at all times

Answer: A,D

Explanation:

NAE agents are software components that run on Aruba CX switches to monitor various aspects of network health and performance. NAE agents use NAE scripts to define what data to collect, how to analyze it, and what actions to take when certain conditions are met. A single NAE script can be used by multiple NAE agents on different switches or even different switch stacks. However, NAE scripts must be reviewed and signed by Aruba before being used on production switches. This is to ensure that the scripts are safe, secure, and compliant with Aruba standards.

NEW QUESTION # 87

Your CX 6300 VSF stack has OSPF adjacency over SVI 10 with LAG 1 to a neighboring device.

The following configuration was created on the switch:

What needs to be done to advertise the newly created networks using OSPF without forming new adjacencies?

- A.
- B.
- C.
- D.

Answer: D

Explanation:

Chosen option shows `ip ospf 1 area 0` to add the interfaces to OSPF, and `ip ospf passive- interface`, which ensures the networks are advertised but do not form new OSPF adjacencies.

This meets the requirement of advertising the new networks without creating additional adjacencies.

NEW QUESTION # 88

Your customer has an Aruba CX 6200F VSF stack with two switches. A third member (JL726A) needs to be added to the VSF configuration. What is the configuration that enables the new devices to join the VSF?

- A.
- B.
- C.
- D.

Answer: D

Explanation:

According to the Aruba Documentation Portal¹, the Aruba CX 6200F VSF stack is a feature that allows you to create a virtual switching framework (VSF) with up to eight members that can be managed as a single logical device. The VSF stack provides benefits such as load balancing, failover, redundancy, and security.

To add a new device to the VSF stack, you need to configure the device with the VSF command `vsf member` and specify the type, link, and secondary-member information. The type of the new device can be one of the following: JL726A, JL726B, JL726C, or JL726D. The link is the interface that connects the new device to the existing VSF members. The secondary-member is an optional parameter that specifies which member will act as a backup in case of a failure.

NEW QUESTION # 89

You are deploying Aruba CX 6300's with the customers requirement to only allow one (1) VoIP phone and one (1) device.

The following local role gets assigned to the phone

port-access role VoIP device-traffic-class voice

What set of commands best fits this requirement?

- A. interface 1/1/1
aaa authentication port-access auth-mode multi-domain
- B. interface 1/1/1
aaa authentication port-access client-limit 1
aaa authentication port-access auth-mode device-mode
- C. interface 1/1/1
aaa authentication port-access client-limit multi-domain 2 aaa authentication port-access auth-mode multi-domain
- D. interface 1/1/1
aaa authentication port-access client-limit 2
aaa authentication port-access auth-mode client-mode

Answer: C

Explanation:

Aruba CX 6300 switches support various features to control the port access for different types of devices, such as client mode, device mode, and multidomain mode. These features can help limit the number of clients that can connect to a port and prevent unauthorized devices from accessing the network.

This is because option C shows how to configure the client limit and the auth-mode for a specific port using the interface command and the aaa authentication port-access command. The client limit specifies the maximum number of clients that can connect to a port. The auth-mode specifies the authentication mode for the port. In this case, option C sets both parameters to multi-domain mode, which allows only one voice device and one data device to be authenticated on a port

NEW QUESTION # 90

You are configuring an SVI on an Aruba CX switch that needs to have the following characteristics:

* VLANID = 25

. IPv4 address 10 105 43 1 with mask 255 255 255.0

* IPv6 address fd00:5708::f02d:4df6 with a 64 bit prefix length

* member of VRF eng

* VRF eng and VLAN 25 have not yet been created

Which command lists will satisfy the requirements with the least number of commands?

- A.
- B.
- C.
- D.

Answer: B

Explanation:

Explanation

This is the correct command list that will satisfy the requirements with the least number of commands. Option C contains four commands that will create VLAN 25, assign it to VRF eng, create an SVI for VLAN 25 with IPv4 and IPv6 addresses, and enable the SVI. The other options are incorrect because they either contain more commands than necessary or do not meet all the requirements. References:
