

Analytics-DA-201 Test Labs | Reliable Analytics-DA-201 Dumps Pdf

How Ask AI works

Three steps from question to artifact — no dashboards to configure, no filters to set.

01

You ask in natural language

Type a question or request the way you'd say it to a colleague. No special syntax, no query language.

02

AI reads your test data

TestRelic AI's AI maps your prompt to your live test runs, failure logs, coverage metrics, and historical trends.

03

You get a usable artifact

The output isn't just text — it's a rendered dashboard, a structured plan, a shareable report, or a deck slide. Ready to act on.

What you can generate

Every artifact is rendered live from your actual test data — not templates.

Live Dashboards

Ask for a test health dashboard and get a fully-populated view — pass rates, MTTR, flaky test trends — instantly rendered from your real data.

Test Plans

Describe a feature or module and get a structured regression plan with prioritized test cases, coverage gaps, and edge-case suggestions.

QA Reports

Generate weekly or sprint-level QA summaries with failure trends, metric comparisons, and PO-escape tracking — ready to share in seconds.

Stakeholder Slides

Turn test metrics into a polished sprint review deck. Charts, coverage tables, and action items — formatted for leadership, not just engineers.

Test Path Mapping

Describe a user journey and get a visual map of critical test paths, priorities, timing, and coverage gaps across your checkout or auth flows.

Plain English Queries

Ask anything: "Which tests broke after last deploy?" or "What's the flakiest suite this week?" — no SQL, no filters, just answers.

Built for every role on the team

Ask AI speaks the language of QA leads, developers, managers, and PMs alike.

QA Lead

Prompt

"Generate a sprint review deck with test coverage metrics"

🔗 4-slide deck: Test Health, Coverage by Module, Flaky Trends, Action Items

Engineering Manager

Prompt

"What broke after yesterday's deployment?"

🔗 Regression report: 5 failing tests, root cause, affected modules

Developer

Prompt

"Map critical user paths through checkout to confirmation"

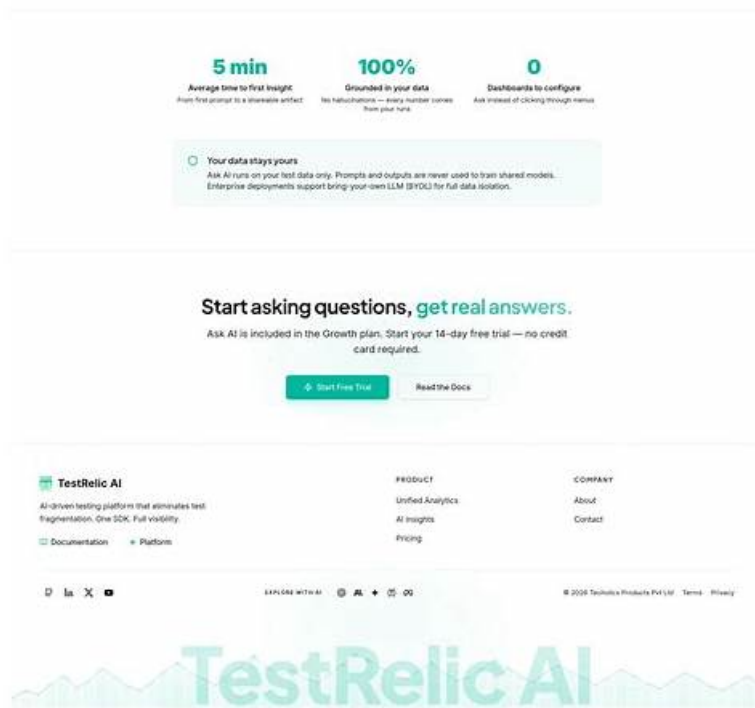

🔗 Visual test path map with P0/P1 priorities and timing data

Product Manager

Prompt

"Build a weekly QA summary report with failure trends"

🔗 Shareable weekly summary with 7-day trend charts and KPIs

To help candidate breeze through their exam easily, VCEngine develop Salesforce Analytics-DA-201 Exam Questions based on real exam syllabus for your ease. While preparing for the Analytics-DA-201 exam candidates suffer a lot in the search for the preparation material. If you prepare with Salesforce Analytics-DA-201 Exam study material you do not need to prepare anything else. Our experts have prepared Salesforce Analytics-DA-201 dumps questions that cancel out your chances of exam failure.

It is all due to the top features of Salesforce Certified Tableau Data Analyst Analytics-DA-201 exam dumps. These features are three Salesforce Certified Tableau Data Analyst exam questions formats, free exam dumps download facility, three months updated Salesforce Analytics-DA-201 exam dumps download facility, affordable price and 100 exams passing money back guarantee. All these Salesforce Certified Tableau Data Analyst dumps features are designed to assist you in Salesforce Certified Tableau Data Analyst Analytics-DA-201 Exam Preparation and enable you to pass the exam with flying colors.

Reliable Analytics-DA-201 Dumps Pdf, Exam Analytics-DA-201 Cram Review

The Salesforce Analytics-DA-201 pdf format of the VCEngine product is easy-to-use. It contains actual Salesforce Certified Tableau Data Analyst (Analytics-DA-201) exam questions. You can easily download and use Analytics-DA-201 pdf on laptops, tablets, and smartphones. VCEngine regularly updates Salesforce Analytics-DA-201 Exam Questions' pdf version so that you always have the latest material. Furthermore, the Salesforce Analytics-DA-201 pdf can be printed enabling paper study.

Salesforce Certified Tableau Data Analyst Sample Questions (Q63-Q68):

NEW QUESTION # 63

You have a dashboard that contains confidential information about patients health. The data needs to always be up to date for a team of healthcare workers How should you share me dashboard with the healthcare workers?

- A. Publish the dashboard to Tableau Server
- B. Print the dashboard to PDF
- C. Export the dashboard as a .twbx
- D. Publish the dashboard to Tableau Public

Answer: A

Explanation:

To share a dashboard that contains confidential information about patients health and needs to always be up to date for a team of healthcare workers, you should publish it to Tableau Server. This will allow you to control who can access and interact with your dashboard, as well as schedule automatic refreshes of your data source or extract. Publishing to Tableau Public would expose your data to anyone on the internet, printing to PDF would not update your data, and exporting as a .twbx would require sending a large file that might not be compatible with other versions of Tableau. References: https://help.tableau.com/current/pro/desktop/en-us/publish_workbooks_share.htm https://help.tableau.com/current/pro/desktop/en-us/publish_workbooks_tableauserver.htm

When sharing sensitive and confidential information that needs to be kept up-to-date, such as patient health data for a team of healthcare workers, the best practice is to publish the dashboard to Tableau Server. Tableau Server is designed for secure, controlled access and can be configured to ensure that data is refreshed as needed. Publishing to Tableau Public is not secure for confidential data, printing to PDF or exporting as a .twbx does not allow for live data updates.

NEW QUESTION # 64

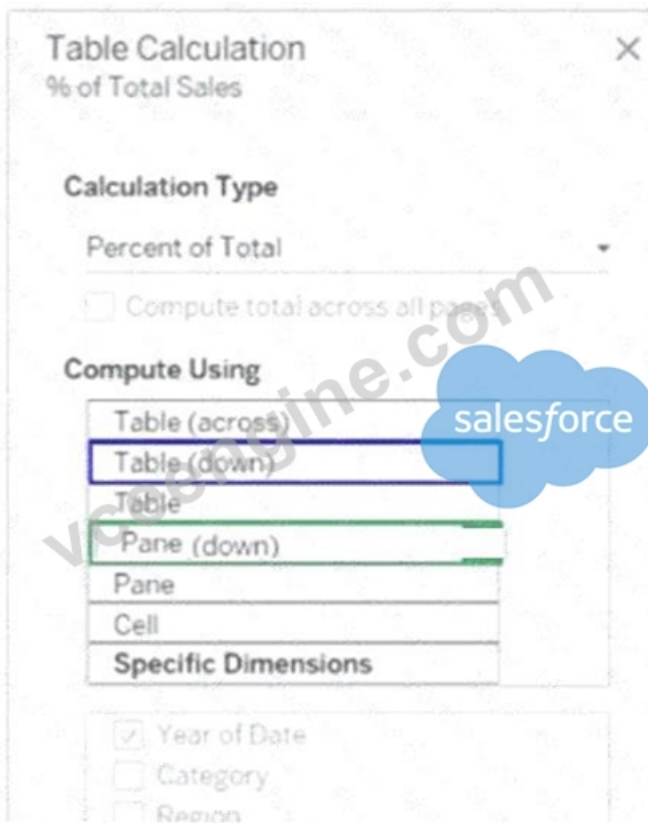

You have a data source that contains the following columns.

Name	Data type
Order Date	Date
Region	String
State	String
City	String
Sales	Number (decimal)
Profit	Number (decimal)

You have the following view that shows the percentage of total sales by category:

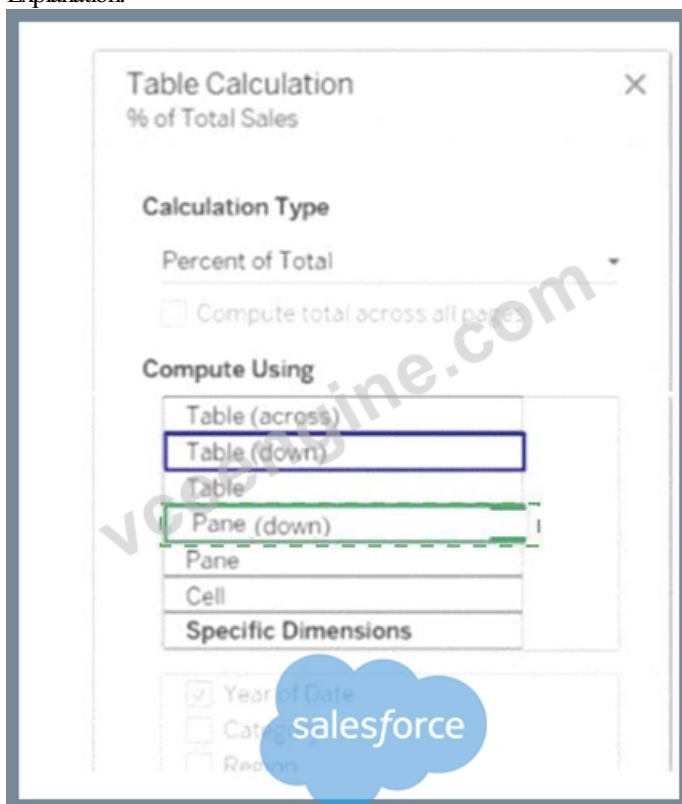

Region	Category	2019	2020	2021	2022
Central	Furniture	20.09%	21.73%	31.00%	27.18%
	Office Supplies	22.15%	15.24%	27.42%	35.19%
	Technology	19.91%	24.54%	29.85%	25.70%
East	Furniture	22.68%	26.84%	22.27%	29.22%
	Office Supplies	17.50%	20.76%	30.07%	31.67%
	Technology	17.16%	22.59%	27.36%	32.89%
South	Furniture	22.99%	20.55%	23.80%	32.66%
	Office Supplies	20.68%	24.87%	22.81%	31.65%
	Technology	34.23%	10.76%	24.89%	30.13%
West	Furniture	19.83%	22.57%	29.22%	28.39%
	Office Supplies	23.93%	17.14%	21.59%	37.34%
	Technology	17.84%	17.90%	26.18%	28.00%

You want to change the calculation to show the percentage of total sales within the categories of every region annually. Which Compute Using option should you use? (Click the appropriate Option in the Answer Area.)

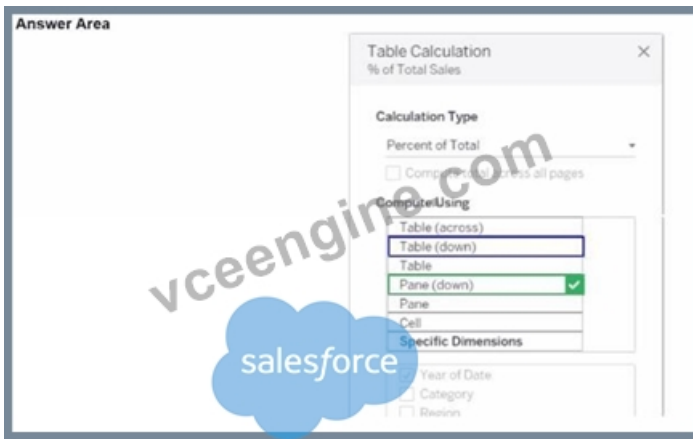

Answer:

Explanation:

Explanation:

NEW QUESTION # 65

You have a dataset that contains sales data. The following is a sample of the data.

You need to return a value of true if a month has sales greater than \$50,000. otherwise the formula must return a value of false.

Which two formulas achieve the goal Choose two

- A. `SUM([Sales]) IN (50000)`
- B. `[Sales] > 50000`
- C. `MAX([Sales], 50000)`
- D. `IIF(SUM([Sales]) > 50000, TRUE, FALSE)`

Answer: B,D

Explanation:

The two formulas that will return a value of true if a month has sales greater than \$50,000, otherwise the formula must return a value of false, are:

B). `IIF(SUM([Sales]) > 50000, TRUE, FALSE)` D). `[Sales] > 50000`

The IIF function is a logical function that returns one value if a condition is true, and another value if the condition is false. In this case, the condition is `SUM([Sales]) > 50000`, which means that the sum of sales for a month is greater than \$50,000. The function will return TRUE if the condition is true, and FALSE if the condition is false.

The comparison operator `>` is a logical operator that returns TRUE if the left operand is greater than the right operand, and FALSE otherwise. In this case, the operands are `[Sales]` and `50000`, which means that the sales for a month are greater than \$50,000. The operator will return TRUE if the sales are greater than \$50,000, and FALSE otherwise.

The other options are not correct for this scenario. The IN function is a logical function that returns TRUE if a value is in a set of values, and FALSE otherwise. In this case, the value is `SUM([Sales])`, which is not in the set of values (50000). The function will always return FALSE. The MAX function is an aggregation function that returns the maximum value in a field or expression. In this case, the field or expression is `[Sales], 50000`, which is not valid syntax. The function will return an error.

NEW QUESTION # 66

Which attributes are required for the field that is used to hide or show an object with Dynamic Zone Visibility?

- A. String, Fixed Level of Detail (LOD), Dependent on the viz
- B. Boolean, Single Value, Independent of the viz
- C. Boolean, Parameter, Single Value
- D. Single Value, Integer, Independent of the viz

Answer: B

NEW QUESTION # 67

You are developing a data source in Tableau Prep.

You have two tables named Orders and Employees.

The Orders table was created in 2019 and contains the following columns.

The Employees table contains all the employee information for the various sales teams in the sales department and contains the following columns

You want to prepare the data so that you can analyze sales trends over time for every sales team.

Which three actions should you perform in order? (Place the three correct options in order. Use the arrows to move Options to Answer Area. Use Answer Area arrows to re-order the options.)

Answer:

Explanation:

Explanation:

There are different ways to prepare the data in Tableau Prep, but one possible answer is:

Answer area:

* Join the tables.

* Aggregate the data by Sales Team.

* Add the following filter to the Employees table: Sale Team - Team Alpha.

To analyze sales trends over time for every sales team, you need to combine the data from the Orders and Employees tables. You can do this by joining the tables on the Rep ID column, which is a common identifier for both tables. This will create a single table with all the columns from both tables. Next, you need to aggregate the data by Sales Team, which is the level of analysis you want. You can do this by grouping the data by the Sales Team column and applying an aggregation function (such as sum, average, count, etc.) to the other columns that you want to measure (such as Total Amount, Rep Tenure, etc.). This will create a summary table with one row for each sales team and the aggregated values for the other columns. Finally, you need to filter the data to focus on a specific sales team, such as Team Alpha. You can do this by adding a filter to the Employees table and selecting only the rows where Sales Team equals Team Alpha. This will remove the rows for other sales teams and keep only the data for Team Alpha.
