The training courses cover all the topics that appear in the certification exam, and professionals can gain hands-on experience in configuring and managing MikroTik routers and networking products.

The MTCNA Certification is recognized globally and is highly valued by employers. It is a great way for network professionals to enhance their career prospects and increase their earning potential. MikroTik Certified Network Associate Exam certification is also a stepping stone to more advanced MikroTik certifications, such as the MikroTik Certified Routing Engineer (MTCRE) and the MikroTik Certified Wireless Engineer (MTWE).

MikroTik Certified Network Associate Exam Sample Questions (Q193-Q198):

NEW QUESTION # 193
Using wireless connect-list it's possible to prioritize connection to one Access Point over another Access Point by changing the order of the entries.

- A. True

- B. False

Answer: A

Explanation:
The connect-list in RouterOS is used to define rules for wireless client behavior when connecting to available Access Points. You can define multiple entries in the connect-list, and RouterOS processes them in top-down order. This allows prioritization of APs based on criteria such as SSID, signal strength, and MAC address.
MTCNA Course Material - Wireless Client Settings:
"The connect-list determines the order in which the wireless client will try to associate with Access Points.
Entries are processed from top to bottom, allowing prioritized connection attempts." Rene Meneses MTCNA Study Guide - Wireless & Connect-List Section:
"By placing the most preferred AP at the top of the connect-list, you ensure it is attempted first. Reordering entries is used to manage roaming behavior and priority." MikroTik Wiki - Wireless Client & Connect List:
"The client will attempt to connect to the first matching entry in the connect list. This means the connect list can be used to define AP priorities." Therefore, the statement is true.

NEW QUESTION # 194
Which of the following Routes statuses are possible?

- A. S = Static
- B. A = Active
- C. D = Drop
- D. C = Connected

Answer: A,B,D

NEW QUESTION # 195
During a scan, in order to see all the available wireless frequencies that are supported by the card, the following option must be selected in the wireless card's "Frequency Mode":

- A. superchannel
- B. manual txpower
- C. regulatory domain

Answer: A

Explanation:
In MikroTik RouterOS, enabling the "superchannel" frequency mode allows access to all frequencies supported by the wireless chip, including those that may be outside of country-specific regulatory limits. This mode is typically used in lab testing or in regions where regulations permit.
* A. superchannel ##Correct. Enables full frequency range
* B. regulatory domain # Restricts visible frequencies to region's law
* C. manual txpower # Controls power output, not frequency scanning
MTCNA Course Material - Wireless Configuration Options:
"To unlock all available wireless frequencies for scanning or connection, enable the 'superchannel' frequency mode." Rene Meneses Study Guide - Wireless Advanced Config:
"Superchannel mode shows all channels supported by the hardware. Use with caution - may violate regulations." Terry Combs Notes - Wireless Modes:
"Want to see hidden or extended frequencies? Use superchannel mode. Not legal in every region."

NEW QUESTION # 196
What wireless card can we use to achieve 100 Mbps actual wireless throughput?

- A. 802.11 b/g
- B. 802.11 a
- C. 802.11 a/n
- D. 802.11 a/b/g

- E. 802.11 a/b/g/n

Answer: A

NEW QUESTION # 197
Where is a hub specified in the OSI model?

- A. Physical layer
- B. Application layer
- C. Data Link layer
