問題 #73

Match each HPE Synergy logical component with the definition.

Component	Definition
Enclosure group	Acts as a recipe for creating a group that represents the available networks, uplink sets, and interconnect settings for a set of physical interconnects in a set of enclosures.
Logical enclosure	A single administrative entity that consists of the configuration for a set of interconnects in a single enclosure or a frame link topology.
Logical interconnect	A logical resource that defines a consistent configuration for an enclosure or a set of enclosures making up a logical enclosure.
Logical interconnect group	Contains the configuration intended for a set of physical enclosures.

問題 #74

Click the drop-down menu that will allow you to define the location of the master modules within the logical interconnect group.

Create Logical Interconnect Group General ?

General

Name LIG-ETH

Logical Interconnect Group

Using the selectors below, describe the logical interconnect group to be created and then click "Select interconnects" to see the bay and interconnect choices.

Interconnect type Virtual Connect SE 100Gb F32 Module for Synergy

Enclosure count 3

Interconnect bay set 3

Redundancy Redundant

Downlink speed 25 Gb/s

Select interconnects

答案:

Redundancy: Redundant

Downlink speed: 25 Gb/s

Select interconnects

Explanation:

Click the drop-down menu next to "Interconnect bay set".

To define the location of the master modules within the logical interconnect group, you need to select the appropriate interconnect bay set. The drop-down menu next to "Interconnect bay set" allows you to specify which bays the interconnect modules will be placed in, thereby determining the location of the master modules.

問題 #75

Which statement about HPE OneView milestone releases is true?

- A. A milestone release is a release which must be installed on HPE Composer to support current version of the Service Pack for Synergy
- B. A milestone release is a release with an enhanced update architecture that is a prerequisite prior to updating to a subsequent release.
- C. A milestone release is a release that is published when HPE releases new hardware components to immediately support new systems
- D. A milestone release is available for selected partners that give access to HPE OneView features which are not officially announced.

答案: B

解題說明:

A milestone release in HPE OneView refers to a version that includes significant architectural enhancements and updates. It serves as a prerequisite for subsequent updates, ensuring that the system is prepared for the next set of features and improvements. This type of release is essential for maintaining compatibility and stability as new hardware components and features are introduced.

問題 #76

Put the steps of the HPE infobright flow in the correct order.

答案：

解題說明：

Explanation:

(observing, learning, predicting, recommending, acting)

* Observing: The first step involves collecting and monitoring data from the infrastructure. HPE InfoSight continuously gathers telemetry data from various components, including storage, compute, and networking devices.

* Learning: In this step, the collected data is analyzed to identify patterns and trends. Machine learning algorithms process the data to understand the normal behavior of the system and detect anomalies.

* Predicting: Based on the learned patterns, HPE InfoSight can predict potential issues before they occur. This predictive analysis helps in identifying areas that might cause problems in the future.

* Recommending: After predicting potential issues, HPE InfoSight provides actionable recommendations to prevent or resolve these issues. These recommendations are based on best practices and the vast amount of data analyzed by InfoSight.

* Acting: Finally, the recommendations are implemented to optimize the performance and reliability of the infrastructure. This step may involve configuring settings, applying updates, or other actions to maintain the health of the system.

問題 #77

You are troubleshooting an HPE OneView server profile that presents a critical state.

The server profile was configured with a Link Aggregation Group.

What should you check to fix the issue?

- A. If the logical enclosure is built on at least three HPE Synergy frames
- B. if both FlexNICs are connected to different networks
- C. if the logical enclosure is configured with redundant master modules
- D. if both FlexNICs are configured with the same speed

答案： D

解題說明：

When troubleshooting a server profile in HPE OneView that is in a critical state due to a Link Aggregation Group (LAG), it is important to check if both FlexNICs are configured with the same speed. Inconsistent speeds can cause issues with link aggregation, leading to network instability and performance degradation.
