EMC Dell PowerProtect Data Manager Deploy 2023 Exam Sample Questions (Q100-Q105):

NEW QUESTION # 100

A PowerProtect Data Manager administrator must restore a single mailbox item from the Microsoft Exchange backup. Which step should be performed first?

Response:

- A. Mount Microsoft Exchange backup to an auxiliary host.
- B. Restore Recovery Database to a standby server.
- C. Restore Microsoft Exchange backup in a temporary location.
- **D. Mount Microsoft Exchange mailbox database backup.**

Answer: D

NEW QUESTION # 101

When integrating PowerProtect Data Manager with MS-SQL, what is a key consideration?

- A. SQL version
- B. Server location
- C. Number of users
- **D. Database size**

Answer: D

NEW QUESTION # 102

What is a key factor in ensuring effective backup of VMs with PowerProtect Data Manager?

- **A. VM ' s snapshot capability**
- B. VM ' s hardware version
- C. VM ' s guest operating system

- D. VM ' s network settings

Answer: A

Explanation:

PowerProtect Data Manager ' s virtual machine protection is built upon a foundation of snapshot-based technology using the VMware vStorage APIs for Data Protection (VADP).

* Snapshot Reliance: To perform an image-level backup, PPDM (via the VM Direct Engine) requests that VMware vCenter create a snapshot of the target VM. This freezes the virtual disks, allowing PPDM to read the data while the VM remains operational.

* VADP Integration: If a VM ' s snapshot capability is compromised—for instance, due to existing broken snapshot chains, independent disks, or RDM (Raw Device Mapping) disks in physical mode—the backup will fail.

* CBT (Changed Block Tracking): Effective backups also rely on VMware ' s CBT to identify only the blocks that have changed since the last backup. This is facilitated through the snapshot mechanism.

Without the ability to successfully create and manage snapshots, PPDM cannot perform a consistent image-level protection of the virtual asset.

NEW QUESTION # 103

A PowerProtect Data Manager was deployed. Which option is displayed on the welcome screen when the PowerProtect Data Manager UI is accessed for the first time?

- A. Restore Backup
- **B. Restore from Disaster Recovery Backup**
- C. Change Password
- **D. Configure**

Answer: B,D

Explanation:

After the PowerProtect Data Manager OVA is deployed and the virtual machine is powered on, the administrator accesses the UI via a web browser using the assigned IP address or FQDN.

Upon this first access, the system has not yet been initialized. Therefore, the UI presents a Welcome Screen that offers two distinct paths for the administrator:

Configure (Option A): This is the "New Install" path. Selecting this option launches the configuration wizard where the administrator sets the system name, NTP, DNS, passwords, and other foundational settings.

Restore from Disaster Recovery Backup (Option B): This path is used if the administrator is recovering a previous PPDM environment. It allows the user to point the new appliance to an existing metadata backup (stored on a PowerProtect DD) to restore the full configuration and protection history of a failed instance.

NEW QUESTION # 104

What is a primary requirement for deploying PowerProtect Data Manager in a virtual environment?

Response:

- A. Enable database compression
- **B. Configure a static IP address for the console**
- C. Ensure compatibility with only Linux operating systems
- D. Deploy the system with the latest firmware

Answer: B
