100% Pass 2026 JN0-336: Perfect Security, Specialist (JNCIS-SEC) Exam Discount

The aim that we try our best to develop the JN0-336 exam software is to save you money and time, and offer the effective help for you to pass the exam during your preparation for JN0-336 exam. Our software has help more JN0-336 exam candidates get the exam certification, but no matter how high our pass rate is, we still guarantee that if you fail the JN0-336 Exam, we will full refund the money you purchased the JN0-336 exam software, which makes you be more rest assured to purchase our product.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q53-Q58):

NEW QUESTION # 53

Which two statements are correct about JSA data collection? (Choose two.)

- A. The Event Collector collects information using BGP FlowSpec.
- B. The Flow Collector parses logs.
- C. The Flow Collector can use statistical sampling
- D. The Event Collector parses logs

Answer: C,D

Explanation:

The Flow Collector can use statistical sampling to collect and store network flow data in the JSA database. The Event Collector collects information from various sources including syslog, SNMP, NetFlow, and BGP FlowSpec. Both the Flow Collector and the Event Collector parse logs to extract useful information from the logs.

NEW QUESTION # 54

Exhibit

Referring to the exhibit, which two statements describe the type of proxy used? (Choose two.)

- A. reverse proxy
- B. server protection proxy
- C. forward proxy
- D. client protection proxy

Answer: A,C

Explanation:

In the exhibit, the SRX Firewall could be acting as a forward proxy, managing outbound internet requests from internal users or clients within a private network to the internet. Forward proxies are commonly used to control and monitor outbound traffic, provide content caching to improve load times, and enforce company policies.

The scenario can also imply a reverse proxy setup where the SRX Firewall might be configured to direct incoming requests from the internet to the web application. Reverse proxies are used to balance load, enhance security, manage SSL encryption, and provide additional caching functionalities for inbound traffic to servers.

NEW QUESTION # 55

How does Juniper ATP Cloud protect a network from zero-day threats?

- A. It uses antivirus software.
- B. It uses known virus signatures.
- C. It uses a cache lookup.
- D. It uses dynamic analysis.

Answer: D

Explanation:

Juniper ATP Cloud is a cloud-based service that provides advanced threat prevention and detection for your network. It integrates with SRX Series firewalls and MX Series routers to analyze files and network traffic for signs of malicious activity. Juniper ATP Cloud protects a network from zero-day threats by using dynamic analysis, which is a method of executing files in a sandbox environment and observing their behavior and network interactions. Dynamic analysis can uncover unknown malware that may evade static analysis or signature-based detection methods.

NEW QUESTION # 56

Which two statements are correct about the cSRX? (Choose two.)

- A. The cSRX only supports Layer 2 "bump-in-the-wire" deployments.
- B. The cSRX supports firewall, NAT, IPS, and UTM services.
- C. The cSRX has three default zones: trust, untrust, and management
- D. The cSRX supports BGP, OSPF, and IS-IS routing services.

Answer: B,C

Explanation:

The two statements that are correct about the cSRX are that it supports firewall, NAT, IPS, and UTM services, and that it has three default zones: trust, untrust, and management. The cSRX is a software-defined security solution that provides comprehensive network security capabilities and is designed for virtualized environments. It supports firewall, NAT, IPS, and UTM services to protect against threats, as well as BGP, OSPF, and IS-IS routing services for routing functionality. Additionally, the cSRX has three default zones: trust, untrust, and management. The trust zone is used to define traffic that is allowed to enter the network, the untrust zone is used to define traffic that should be blocked from entering the network, and the management zone is used to manage the device itself. The cSRX does not support Layer 2 "bump-in-the-wire" deployments.

NEW QUESTION # 57

How does the SSL proxy detect if encryption is being used?

- A. It verifies the length of the packet
- B. It uses application identity services.
- **C. It looks at the destination port number.**
- D. It queries the client device.

Answer: C

Explanation:

The SSL proxy can detect if encryption is being used by looking at the destination port number of the packet. If the port number is 443, then the proxy can assume that the packet is being sent over an encrypted connection. If the port number is different, then the proxy can assume that the packet is not encrypted. For more information, please refer to the Juniper Networks JNCIS-SEC Study Guide.

NEW QUESTION # 58

.....

JN0-336 Soft test engine can stimulate the real exam environment, so that you can know the procedures of the exam, and your nerves can be relieved. This version can also build up your confidence for the exam. In addition, JN0-336 exam dumps contain most of knowledge points for the exam, and you can master them as well as improve your ability in the process learning. We also pass guarantee and money back guarantee if you fail to pass the exam, we will return your money if you fail to pass the exam. Free update for JN0-336 Training Materials is also available, and our system will send you the latest version to your email automatically.

JN0-336 Test Questions Vce: <https://www.testsimulate.com/JN0-336-study-materials.html>

Our education experts have put all what you consider into our Juniper JN0-336 exam preparation materials, We guarantee you that our top-rated Juniper JN0-336 practice exam (PDF, desktop practice test software, and web-based practice exam) will enable you to pass the Juniper JN0-336 certification exam on the very first go, Therefore, you are able to get hang of the essential points in a shorter time compared to those who are not willing to use our JN0-336 exam torrent.

It can also explain why the name aesthetics" appeared JN0-336 Practice Exam Fee only at this point to show the research methods that have long been paved, Storing an application's transient state can be difficult because objects JN0-336 containing state often have event subscriptions to or from other objects that are not serialized.
