Development-Lifecycle-and-Deployment-Architect Test Testking, Development-Lifecycle-and-Deployment-Architect Reliable Exam Tips

This updated Salesforce Development-Lifecycle-and-Deployment-Architect exam study material of ActualtestPDF consists of these 3 formats: Salesforce Certified Development Lifecycle and Deployment Architect (Development-Lifecycle-and-Deployment-Architect) PDF, desktop practice test software, and web-based practice exam. Each format of ActualtestPDF aids a specific preparation style and offers unique advantages, each of which is beneficial for strong Salesforce Certified Development Lifecycle and Deployment Architect (Development-Lifecycle-and-Deployment-Architect) exam preparation. The features of our three formats are listed below. You can choose any format as per your practice needs.

To be eligible to take the Salesforce Development-Lifecycle-and-Deployment-Architect exam, candidates must have a strong background in Salesforce development, as well as experience working with Salesforce's development tools and technologies. Candidates must also have a deep understanding of Salesforce's architecture and be familiar with best practices for deploying and managing Salesforce applications.

To be eligible for the Salesforce Development-Lifecycle-and-Deployment-Architect Certification Exam, candidates must have a minimum of three years of experience in Salesforce development and architecture. Candidates must also complete the prerequisites for this certification, which include passing two other Salesforce certification exams: Salesforce Certified Platform Developer I and Salesforce Certified Platform App Builder. Development-Lifecycle-and-Deployment-Architect Exam consists of multiple-choice questions and is timed at two and a half hours. Upon passing the exam, candidates are awarded the Salesforce Certified Development Lifecycle and Deployment Architect certification, which is recognized as a highly valuable credential in the industry.

With this certification, professionals can demonstrate their expertise in designing and implementing complex solutions on the Salesforce platform and advance their career in Salesforce development and architecture.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q107-Q112):

NEW QUESTION # 107

Universal Containers (UC) is looking at implementing a large number of features using an AppExchange product. This product uses Subjects to store and configure important business logic within the application.

Which two options should an architect recommend, as the source of truth for storing this reference data?

Choose 2 answers

- A. Store the records in a version control system.
- **B. Store the records in sandboxes and production.**
- C. Attach CSV files to the user stories in a project management system.
- **D. Use a third-party product to manage these records.**

Answer: B,D

NEW QUESTION # 108

Universal Containers (UC) had been using change sets for deploying all of the modifications to its Sales Cloud apps. After multiple business units joined the single Salesforce instance, there is a need to evaluate which development model is the most suitable for UC. The IT management has shown a particular interest in finding out more about the package development model.

As an architect, which two statements can be made to articulate the differences between the change set model and package development model?

Choose 2 answers

- A. In change set development, the source of truth is a combination of the metadata already in the environment and the content of your change Set.
- **B. In package development, the source of truth is the metadata in the package project, which makes it easy to integrate to a version control System.**
- **C. In package development, the best practice is to consider the dependencies and build the dependencies into the package so it can be deployed in any other target orgs.**
- D. A change set can be retrieved from the developer's workbench as a package, then pushed into the version control system to achieve the Versioning control.

Answer: B,C

Explanation:

In the change set model, the source of truth is a combination of the metadata already in the environment and the content of your change set, as you stated correctly. However, a change set cannot be retrieved from the developer's workbench as a package, nor can it be pushed into the version control system. Change sets are only available within the Salesforce UI, and they are not compatible with version control systems. In the package development model, the source of truth is the metadata in the package project, which makes it easy to integrate to a version control system, as you stated correctly. Additionally, in the package development model, the best practice is to consider the dependencies and build them into the package so it can be deployed in any other target orgs. This ensures that the package is self-contained and does not rely on external components that may not exist in the target org.

NEW QUESTION # 109

Ursa Major Solar (UMS) has used Aura components significantly in its Salesforce application development. UMS has established a robust test framework and the development team follows the Salesforce recommended testing practices. UMS team uses Salesforce's test tool To check for common accessibility issues.

In which two environments the UMS team can call Aura accessibility tests?

Choose 2 answers

- **A. WebDriver Test**
- B. ACCTEST
- C. AuraDriver Test

- **D. JSTEST**

Answer: A,D

Explanation:

Explanation

Aura accessibility tests can be called in JSTEST and WebDriver Test environments. JSTEST is a JavaScript testing framework that runs on Node.js and can be used to test Aura components. WebDriver Test is a Selenium-based testing framework that can be used to test the user interface and accessibility of Aura components. ACCTEST and AuraDriver Test are not valid environments for calling Aura accessibility tests.

NEW QUESTION # 110

5. Universal Containers (UC) is planning to move to Salesforce Sales Cloud and retire its homegrown on-premise system. As part of the project, UC will need to migrate 5 million Accounts, 10 million Contacts, and 5 million Leads to Salesforce.

Which three areas should be tested as part of data migration?

Choose 3 answers

- **A. Account and Lead ownership**
- B. Lead assignment
- **C. Data transformation against source system**
- **D. Contact association with correct Account**
- E. Page layout assignments

Answer: A,C,D

NEW QUESTION # 111

Universal Containers (UC) is implementing Salesforce for the first time. Their legacy CRM system is an on- premise home-grown application written in Java. UC plans to implement a continuous integration process that mirrors their current standard. Under what conditions should an Architect recommend against continuous integration?

- **A. The Salesforce instance has only standard functionality**
- B. Test scripts will be generated as part of the testing phase
- C. The client does not have the budget for additional software
- D. There isn't a full sandbox available to leverage

Answer: A

Explanation:

The only condition that would make continuous integration unsuitable for UC is if their Salesforce instance has only standard functionality, as this would mean that there is no need for code deployment or version control. Option A is not a valid reason, as test scripts can be generated and executed as part of the continuous integration process. Option B is not a valid reason, as a full sandbox is not a requirement for continuous integration, and other types of sandboxes can be used instead. Option D is not a valid reason, as there are free or low-cost software tools available for continuous integration, such as Jenkins, Git, and Ant

NEW QUESTION # 112

.....

After you purchase Development-Lifecycle-and-Deployment- Architect exam questions, you should always pay attention to your email address. Once there is a new version, we will send updated information to your email address. As we all know, the authority of a product matches its hit rate. How high the authority of Development-Lifecycle-and-Deployment-Architect Real Exam is, I don't need to say any more. You just know what you will know. You can't really find a product that has a higher hit rate than our Development-Lifecycle-and-Deployment- Architect study materials!
