100% Pass 2026 Professional Google Associate-Cloud-Engineer: Latest Google Associate Cloud Engineer Exam Dumps Free

In this career advancement Google Associate Cloud Engineer Exam (Associate-Cloud-Engineer) certification journey you can get help from valid, updated, and real Associate-Cloud-Engineer Dumps questions which you can instantly download from UpdateDumps. At this platform, you will get the top-rated and Real Associate-Cloud-Engineer Exam Questions that are ideal study material for quick Google Associate-Cloud-Engineer exam preparation.

Google Associate-Cloud-Engineer Exam is a valuable certification for individuals who want to demonstrate their skills and knowledge in managing and deploying applications and services on Google Cloud Platform. It provides a solid foundation for candidates who are looking to pursue a career in cloud computing or for those who want to expand their skills and knowledge in this field.

Google Associate Cloud Engineer Exam Sample Questions (Q102-Q107):

NEW QUESTION # 102
You have just created a new project which will be used to deploy a globally distributed application. You will use Cloud Spanner for data storage. You want to create a Cloud Spanner instance. You want to perform the first step in preparation of creating the instance. What should you do?

- A. Enable the Cloud Spanner API
- B. Configure your Cloud Spanner instance to be multi-regional

- C. Create a new VPC network with subnetworks in all desired regions
- D. Grant yourself the IAM role of Cloud Spanner Admin

Answer: D

Explanation:
https://cloud.google.com/spanner/docs/getting-started/set-up

NEW QUESTION # 103

You want to send and consume Cloud Pub/Sub messages from your App Engine application. The Cloud Pub/Sub API is currently disabled. You will use a service account to authenticate your application to the API. You want to make sure your application can use Cloud Pub/Sub. What should you do?

- A. Enable the Cloud Pub/Sub API in the API Library on the GCP Console.
- B. Use Deployment Manager to deploy your application. Rely on the automatic enablement of all APIs used by the application being deployed.
- C. Grant the App Engine Default service account the role of Cloud Pub/Sub Admin. Have your application enable the API on the first connection to Cloud Pub/Sub.
- D. Rely on the automatic enablement of the Cloud Pub/Sub API when the Service Account accesses it.

Answer: A

NEW QUESTION # 104

Your organization needs to grant users access to query datasets in BigQuery but prevent them from accidentally deleting the datasets. You want a solution that follows Google-recommended practices. What should you do?

- A. Create a custom role by removing delete permissions, and add users to that role only.
- B. Add users to roles/bigquery user role only, instead of roles/bigquery dataOwner.
- C. Add users to roles/bigquery dataEditor role only, instead of roles/bigquery dataOwner.
- D. Create a custom role by removing delete permissions. Add users to the group, and then add the group to the custom role.

Answer: D

Explanation:
https://cloud.google.com/bigquery/docs/access-control#custom_roles
Custom roles enable you to enforce the principle of least privilege, ensuring that the user and service accounts in your organization have only the permissions essential to performing their intended functions.

NEW QUESTION # 105

You have a Kubernetes cluster with 1 node-pool. The cluster receives a lot of traffic and needs to grow. You decide to add a node. What should you do?

- A. Edit the managed instance group of the cluster and increase the number of VMs by 1.
- B. Use "gcloud container clusters resize" with the desired number of nodes.
- C. Edit the managed instance group of the cluster and enable autoscaling.
- D. Use "kubectl container clusters resize" with the desired number of nodes.

Answer: B

Explanation:
A is correct because this resizes the cluster to the desired number of nodes.
B is not correct because you need to use gcloud, not kubectl.
C is not correct because you should not manually manage the MIG behind a cluster.
D is not correct because you should not manually manage the MIG behind a cluster.

NEW QUESTION # 106

You are using Deployment Manager to create a Google Kubernetes Engine cluster. Using the same Deployment Manager deployment, you also want to create a DaemonSet in the kube-system namespace of the cluster. You want a solution that uses the fewest possible services. What should you do?

- A. With Deployment Manager, create a Compute Engine instance with a startup script that uses kubectl to create the DaemonSet.
- B. Use the Deployment Manager Runtime Configurator to create a new Config resource that contains the DaemonSet definition.
- C. In the cluster's definition in Deployment Manager, add a metadata that has kube-system as key and the DaemonSet manifest as value.
- D. Add the cluster's API as a new Type Provider in Deployment Manager, and use the new type to create the DaemonSet.

Answer: D

Explanation:
Explanation
Adding an API as a type provider
This page describes how to add an API to Google Cloud Deployment Manager as a type provider. To learn more about types and type providers, read the Types overview documentation.
A type provider exposes all of the resources of a third-party API to Deployment Manager as base types that you can use in your configurations. These types must be directly served by a RESTful API that supports Create, Read, Update, and Delete (CRUD).
If you want to use an API that is not automatically provided by Google with Deployment Manager, you must add the API as a type provider.
https://cloud.google.com/deployment-manager/docs/configuration/type-providers/creating-type-provider
