Excellent Lab CTFL-UT Questions - Trustable Source of CTFL-UT Exam

Passing CTFL-UT Certification Exam is not an easy task? Choosing DumpStillValid CTFL-UT exam training materials, passing CTFL-UT exam is quite possible. DumpStillValid's CTFL-UT exam training materials is the highly certified IT professionals'collection of experience and innovation results in this field, and have absolute authority. You won't regret to choose DumpStillValid.

ISQI ISTQB Certified Tester-Foundation Level - Usability Testing Sample Questions (Q10-Q15):

NEW QUESTION # 10
Which of the following statements about usability testing is true?

- A. Before the usability test sessions, a pilot usability test session can be conducted
- B. A usability test consists of one usability test session
- C. The conditions under which a usability test is done are irrelevant
- D. The preparation of a usability test is optional

Answer: A

Explanation:
A pilot usability test session is a critical step prior to conducting the actual usability test. Its purpose is to ensure that the test setup,

task design, and moderator instructions are clear and function as expected.
According to ISO 9241-210 and the Nielsen Norman Group's best practices, pilot testing helps detect unforeseen issues and fine-tune the process. Options A and B are incorrect because testing conditions must reflect realistic scenarios, and thorough preparation is essential to gather meaningful usability data. Option D is also incorrect; a usability test typically consists of multiple sessions with different users to gather sufficient data for analysis. The pilot session ensures everything works smoothly before involving real participants.

ISO 9241-210:2019, Ergonomics of human-system interaction - Human-centred design Nielsen Norman Group: Usability Testing 101 Usability.gov: Pilot Testing
##

NEW QUESTION # 11
In a short conversation, a potential customer mentions that accessibility is of great importance to them. What does this mean?

- A. They also seek to address users with limitations
- B. They use prototyping in their development process
- C. They focus on quantitative usability evaluations
- D. They focus on agile development

Answer: A

Explanation:
When a customer emphasizes the importance of accessibility, it means they are concerned with ensuring that users with disabilities or limitations are not excluded from using their products or services. Accessibility is about inclusiveness-providing equal access and opportunity to all users regardless of physical or cognitive ability. Option C directly reflects this understanding. The other options (A, B, and D) are aspects of usability or development methodologies but do not relate to addressing the needs of users with disabilities, which is the core focus of accessibility.

W3C: Accessibility Fundamentals
ISO 9241-171 and 210 - Accessibility and Human-Centered Design
ADA (Americans with Disabilities Act) in Digital Accessibility Contexts

NEW QUESTION # 12
The usability team has written a usability test report. The report has the following structure:
Executive summary (1 page)
Table of contents (1 page)
Findings and recommendations (5 pages)
Objectives (2 pages)
Purpose (2 pages)
Contacts (1 page)
Which best practice does this usability test report violate?

- A. The report misses positive findings
- B. The report makes use of usability jargon
- C. The report is too long
- D. The report misses a description of the evaluation method

Answer: D

Explanation:
A best practice in usability reporting (based on ISO/IEC 25062:2006 - Common Industry Format for usability test reports) is to include a clear description of the evaluation method used. This includes how the test was designed, how participants were selected, what tasks were performed, and under what conditions the test was conducted. This ensures the results are credible and reproducible. The provided structure omits this essential information. While the report length is not excessive and positive findings may or may not be present, the key missing component is the method description.

###

NEW QUESTION # 13
Your project manager asked you for your advice. A recent project failed because the users were not satisfied with the final product, although your project manager claimed that she followed the human-centered design process. She interviewed users at the start of the project, created a first prototype and evaluated that prototype.
Which part of the human-centered design process did she miss?

- A. The "analyze"-part
- B. The "iterate"-part
- C. The "design"-part
- D. The "evaluate"-part

Answer: B

Explanation:
The human-centered design process emphasizes iterative development-testing and refining designs through multiple cycles. In the scenario, the project manager interviewed users and evaluated a prototype but did not iterate based on feedback. Skipping iteration likely resulted in unmet user needs. Human-centered design, per ISO 9241-210, includes: understanding context of use, specifying requirements, producing design solutions, and evaluating-repeated iteratively. Hence, option D ("iterate") is correct.

ISO 9241-210:2019 - Human-Centered Design Processes
Usability.gov: Human-Centered Design Activities
Nielsen Norman Group: Iterative Design in UX
###

NEW QUESTION # 14
You are asked to evaluate the usability of a software application for a law firm. Due to time and budget constraints, it is not possible to include users in the evaluation process.
Which of the following is a valid approach for evaluating the usability in this case?

- A. Accessibility Evaluation
- B. Usability testing
- C. Usability Review
- D. User surveys

Answer: C

Explanation:
When actual users cannot be included, a usability review (often an expert or heuristic evaluation) is the most practical method.
Trained evaluators examine the interface against usability principles and standards to identify potential issues. Surveys require user input, and usability testing cannot proceed without users.
Accessibility evaluation targets inclusivity for users with impairments, which is related but not a substitute for overall usability evaluation. Therefore, option A is the only valid method under these constraints.
