NEW QUESTION # 12
When setting up job requisition template type For Position, the Job Family and Job Function fields are not available for use on the template. What is the reason for this?

- A. These fields must be manually enabled by using Transaction Design Studio
- B. These fields are not available for job postings
- C. Position-based requisition templates don't include fields for which information is available from the job of the position
- D. These fields must be added by the recruiter when the requisition is created

Answer: C

Explanation:
The reason is that Position-based requisition templates don't include fields for which information is available from the job of the position.
Step-by-Step Solution:
* Create a Position-based requisition template.
* Check available fields (Job Family and Job Function are absent).
* Verify that these fields are derived from the linked position's job.
In Position-based templates, fields like Job Family and Job Function are inherited from the position's job definition, reducing redundancy. This is by design in Oracle Recruiting Cloud. Reference: Oracle Recruiting Cloud Requisition Template Guide, Position-Based Templates section.

ORA_IRC_SEARCH_LOCATION_INCLUDE_ALT_NAMES.

* Find the profile option ORA_IRC_SEARCH_LOCATION_INCLUDE_ALT_NAMES.
* Set its value to "Y" or "Yes" at the site level.
* Save and proceed to configure alternate location names as needed.
