Any applicant of the GDAT examination can choose from these preferable formats.

GIAC Defending Advanced Threats Sample Questions (Q12-Q17):

NEW QUESTION # 12

Your security operations center has detected a surge in login attempts from a service account that should only be used by the IT department. The login attempts are originating from multiple machines within the network, some of which belong to departments with no IT access requirements. Further investigation reveals that the service account was compromised.

What immediate action should you take to contain the lateral movement?

Response:

- A. Monitor the service account for further activity without taking action
- B. Disable the compromised account and enforce MFA for all privileged accounts

- C. Initiate a company-wide password reset for all users
- D. Disconnect the entire network from the internet until the issue is resolved

Answer: B

NEW QUESTION # 13

Which techniques should be applied to secure applications during the design phase of the software development lifecycle?

Response:

- A. Using encryption for data protection
- B. Implementing role-based access control
- C. Conducting security audits
- D. Integrating security requirements with functional requirements

Answer: A,B,D

NEW QUESTION # 14

What role does the containment phase play in incident response?

Response:

- A. It focuses on public relations management.
- B. It involves negotiating with attackers.
- C. It includes rolling out new software updates.
- D. It ensures that the threat does not spread within the network.

Answer: D

NEW QUESTION # 15

Your organization is conducting a threat-hunting exercise. During the process, your team identifies an unfamiliar service running on several servers, all communicating with an external IP address that has no known business function. Upon deeper investigation, the team suspects the presence of a command and control (C2) channel.

What immediate steps should your team take to mitigate the threat and secure the network?

Response:

- A. Increase system logging on the servers and wait for more activity to gather evidence
- B. Isolate the affected servers and block communication to the suspicious external IP address
- C. Reboot the affected servers and restore them from backup
- D. Notify all employees to change their passwords and update their access controls

Answer: B

NEW QUESTION # 16

Which method is commonly used by attackers to exfiltrate data using the DNS tunneling technique?

Response:

- A. Using FTP servers to upload stolen data
- B. Transferring data via encrypted HTTP requests
- C. Exploiting open SMB shares for file transfer
- D. Embedding data within DNS queries

Answer: D

NEW QUESTION # 17
