Latest ITFAS-Level-1 Test Question | Exam Discount ITFAS-Level-1 Voucher

It is necessary to strictly plan the reasonable allocation of ITFAS-Level-1 test time in advance. Many students did not pay attention

to the strict control of time during normal practice, which led to panic during the process of examination, and even some of them are not able to finish all the questions. If you purchased ITFAS-Level-1 learning dumps, each of your mock exams is timed automatically by the system. ITFAS-Level-1 learning dumps provide you with an exam environment that is exactly the same as the actual exam. It forces you to learn how to allocate exam time so that the best level can be achieved in the examination room. At the same time, ITFAS-Level-1 Test Question will also generate a report based on your practice performance to make you aware of the deficiencies in your learning process and help you develop a follow-up study plan so that you can use the limited energy where you need it most. So with ITFAS-Level-1 study tool you can easily pass the exam.

NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q52-Q57):

NEW QUESTION # 52

Which of the following options is required while conducting annual testing of an audiovisual device?

- A. Verify proper setting of candela rating
- B. Confirm voice intelligibility
- C. **Verify proper operation**
- D. Confirm sound level based on design

Answer: C

Explanation:

When performing annual testing of notification appliances such as strobes or horns, NFPA 72 mandates functional testing- which means checking that they operate correctly when activated.

NFPA 72 (2022), Table 14.4.3.2 - Testing Frequencies and Methods:

Under "Notification Appliances," the required method for both audible and visible devices is:

"Functional test - verify proper operation."

While things like sound levels and candela settings are verified during acceptance testing or design review, the annual requirement is simply to verify that they work.

Correct answer: C. Verify proper operation

NEW QUESTION # 53

Which NFPA standard regulates how to perform the test of engine driven generator?

- **A. NFPA 110**
- B. NFPA 70
- C. NFPA 101
- D. NFPA 72

Answer: A

Explanation:

Engine-driven generators used for emergency power are not governed directly by NFPA 72. Instead, their installation and testing requirements are found in:

NFPA 110 - Standard for Emergency and Standby Power Systems

NFPA 110 (2022), Chapter 8 details how engine-driven generators must be tested, including runtime, load testing, and maintenance intervals.

NFPA 72 references NFPA 110 whenever standby/emergency power is used for fire alarm systems.

Correct answer: D. NFPA 110

NEW QUESTION # 54

An off-normal signal shall be initiated during which of the following travel distances of the valve control apparatus from its normal position?

- A. 1/2
- B. 1/5
- **C. 1/4**
- D. 1/3

Answer: C

Explanation:

This question is referring to supervisory signaling for control valves in sprinkler systems. When a valve begins to move from its normal (open) position, the fire alarm system must detect and signal this before it reaches too far out of position.

NFPA 72 (2022), Section 17.16.1.3:

"Off-normal signal shall be initiated during the first one-quarter (1/4) of the valve travel distance from its normal position." This ensures timely detection if someone begins to close a sprinkler valve, which could disable the fire suppression system.

Correct answer: B. 1/4

NEW QUESTION # 55

A single open fault, in a Class A pathway, shall result in the annunciation of which of the following signals?

- A. Supervisory
- **B. Trouble**
- C. Alarm
- D. Pre-alarm

Answer: B

Explanation:

In a Class A fire alarm circuit, a single open condition does not affect communication but must still be annunciated as a trouble signal.

NFPA 72 (2022), Section 12.3.1.1.4:

"A single open condition on a Class A pathway shall result in a trouble signal." This maintains system operation while alerting of a wiring fault.

Correct answer: D. Trouble

NEW QUESTION # 56

How often should a monitored fire alarm system be inspected for trouble signals?

- **A. Weekly**
- B. Monthly
- C. Annually
- D. Semiannually

Answer: A

Explanation:

NFPA 72 requires that trouble signals be inspected weekly on monitored fire alarm systems to ensure the system can detect and report problems in a timely manner.

NFPA 72 (2022), Table 14.3.1 - Inspection Frequencies:

"Supervising station systems - Trouble signals" # Weekly

This ensures any open circuits, ground faults, or system issues are discovered promptly.

Correct answer: A. Weekly

NEW QUESTION # 57
