Our staff really regards every user as a family member and sincerely provides you with excellent service.

Cisco Certified Support Technician (CCST) IT Support Sample Questions (Q49-Q54):

NEW QUESTION # 49
A user reports that their scanner is not being recognized by their workstation. The scanner was working earlier in the day.
What should the technician check first?

- A. Reboot the workstation and scanner to reset the connection
- B. Replace the scanner with a new one
- C. Update the scanner driver software immediately
- D. Check the scanner's USB or network connection to ensure it is secure

Answer: D

Explanation:
Correct Answer. C. Check the scanner's USB or network connection to ensure it is secure The first step should always be to check the physical connections as these are often the simplest and most common cause of connectivity issues. Loose or disconnected cables can prevent the scanner from being recognized.
Option A is incorrect. Rebooting the devices is a valid troubleshooting step but should follow checking the physical connections.

Option B is incorrect. Replacing the scanner is premature without first ensuring that simpler fixes, like checking connections, are not effective.
Option D is incorrect. Driver updates are important but typically not the first line of action unless there is indication that the device is recognized but malfunctioning due to software issues.

NEW QUESTION # 50
What is phishing?

- A. Infecting a system with a virus
- B. Redirecting internet traffic to malicious sites
- C. Exploiting a vulnerability in software
- D. Sending deceptive emails to obtain sensitive information

Answer: D

NEW QUESTION # 51
During a routine check, a technician notices that after a recent change in the company's email system, there is a significant delay in message delivery. What is the most appropriate initial action for the technician to take?

- A. Notify all users about the potential email delay issue
- B. Ignore the issue unless users report complaints
- C. Rollback the changes to the email system immediately
- D. Observe and document the email system's performance over the next few hours

Answer: D

Explanation:
Correct Answer. C. Observe and document the email system's performance over the next few hours Observation and documentation provide vital data to determine whether the delay is a transient issue or a persistent problem. This approach allows for a better understanding of the issue's nature and scope before taking further corrective actions.
Option A is incorrect because notifying users may cause unnecessary alarm before fully understanding the issue's extent.
Option B is incorrect as rolling back changes immediately can disrupt operations and might not be necessary if the issue can be resolved with minor adjustments.
Option D is incorrect because ignoring the issue risks exacerbating the problem and can lead to user dissatisfaction.

NEW QUESTION # 52
A network technician wants to monitor incoming connections on a specific port to ensure it is not being flooded.
Which ss command should be used to filter connections by destination port?

- A. ss src :80
- B. ss dst :80
- C. ss dport == :80
- D. ss sport == :80

Answer: C

Explanation:
Correct Answer. D. ss dport == :80 ss dport == :80 filters the output to show all connections where the destination port is 80, useful for monitoring potential flooding or other issues on specific server ports.
Option B is incorrect. ss src :80 would incorrectly filter by source port, not the destination, which isn't useful for monitoring incoming traffic to a port.
Option C is incorrect. ss sport == :80 filters by source port, which isn't relevant for checking incoming connections on a specific port.

NEW QUESTION # 53
You are assisting an end user with a software configuration issue via remote access. You remember seeing a similar issue discussed

in a technical forum.
What is the best way to leverage this information?

- A. Assume the same solution will work and apply it without further validation
- B. Recommend that the end user read the forum themselves and decide on the action to take
- C. Carefully read through the relevant forum thread to understand the context and solutions provided
- D. Quickly skim through the forum thread and apply the first solution you find

Answer: C

Explanation:
Correct Answer. B. Carefully read through the relevant forum thread to understand the context and solutions provided Thoroughly understanding the context in which solutions were proposed ensures that the correct fix is applied and adjusts for any nuances specific to the user's configuration.
Option A is incorrect. Skimming and applying the first found solution can miss important details and lead to inappropriate actions.
Option C is incorrect. Applying a solution without validation can result in further complications if the contexts differ.
Option D is incorrect. Expecting the end user to determine the solution shifts technical responsibility and may overwhelm the user.

NEW QUESTION # 54
......

If you are still study hard to prepare the Cisco 100-140 Exam, you're wrong. Of course, with studying hard, you can pass the exam. But may not be able to achieve the desired effect. Now this is the age of the Internet, there are a lot of shortcut to success. TorrentExam's Cisco 100-140 exam training materials is a good training materials.
